'99 FEB 10 A3:44

it has come to my attention that there is vacillation within the nrc regarding the closure of the nuclear facilities if they are not \_COMPLIANT\_ by 7/1/99. you will note i said compliant not y2k 'READY' whatever that might mean this week.

i live 10 miles away from TMI and remember only too well the last debacle.

how anyone at the nrc can, in good conscience, consider, even if for a moment, not shutting down the reactors with the threat of a catastrophe looming on the horizon is unfathomable to me.

you are jeopardizing the lives of innocent men, women, and children for political expediency. rather a total shutdown of our electrical systems and economy than a meltdown of our nuclear power plants.

THERE ARE NO GUARANTEES!!! we cannot afford to take a chance of this magnitude when the down side far outweighs the upside to such a degree.

god save us from bureaucrats...they will be the death of us all.
