

Nuclear Reg. Comm.

4-25-86

Gentlemen;

my comment on the Environmental Effects on the S.T. P. Plants here near Bay City is as follows. The people here are living in Stress now.

Wonder if to move out of here, or to stay, and suffer the consequences.

People heard a lot about the flaws, they made, from the beginning, such as air pockets, in the Dome Walls,

and also, we seen on T.V. news.

How easily the welds, on Reinforcing Rods were broken loose, with pry Bars. Several of the work Employers, that worked there, from the beginning, and seen, what was going on. said they don't want to be here when they start the plant.

People wanted to hear the Quadrex Report, but they denied it.

If the Nuclear Plant suppose to be safe, as they say it is. Then, how come, they put up towers with sirens on them, within 5 and 10 mile area, they were testing the sirens but

5 mile distance you can not hear what about a farmer on tractor you can not hear it Blow.

If we hear one Green Blaw, you have
time to go in house, the Green Blaw
get in your car 3rd door get out of
here.

All of us owned land, and property, forty
years or more here, before the plant
came here and now, when they blow
the whistle, we have to leave it all here
and get out. This is mostly farming
area, all the people in this rural area
saying, that the S.T.P. Nuclear plant
should not be permitted to operate
as a nuclear plant.

The environmental effect will be great
on all the people in the area.
In Jan, 1986 they started to check
workers for Dose meters,
why did not they the workers in the
leaving of the plant
we all feel the plant is not safe to
operate.

There is more and more danger
of terrorist, suicide attacks.
of the plant be any thing but nuclear
people would not worry
Please consider our plea for help!
Thank you kindly A. B. B. B.
