Gentlemen:

DOCKET NUMBER 86-456/457-02
PROD. & UTIL. FAC.

It has come to my attention that there is an error in the text of Applicant's Motion for Authorization of Fuel Loading and Precritical Testing, filed on August 18, 1986.

On page 14, line 19 of the Motion, the word "below" should read "above". The sentence would then read: "Maintaining the boron concentration in the reactor coolant system at or above 2000 ppm alone will assure the subcritical state of the reactor."

Sincerely,

Peter Thornton
