System. Criterion (10) - Accuracy, Range and  
Sensitivity", John DeVincentis to V. S. Noonan

Subject: Emergency Plan Information

Dear Sir:

In discussions with the Staff, additional questions were raised on certain emergency plan matters. The following is provided in response to these questions.

#### Siren Installation and Testing

We will complete the installation of the Alert and Notification System sirens within the Emergency Planning Zone (EPZ) by the Seabrook Station core load milestone. After each of the sirens has been installed, we will perform a silent test of its activation capability to ensure each siren can be successfully activated from its corresponding central activation location (i.e., either Massachusetts State Police in Framingham, MA for the Massachusetts sirens or Rockingham County Dispatch in Brentwood, NH for the New Hampshire sirens).

#### Public Information Dissemination

Basic emergency response information, including instructions on steps to take in the event of a siren activation, will be prepared and disseminated to all residential mailing addresses within the EPZ prior to the Seabrook Station core load milestone. This information will be displayed in the form of a flyer or pamphlet and will be based on the more detailed material that is under development and review for dissemination at a later time.

1/0

For the transient segment of the EPZ population, this flyer or pamphlet will be made available for appropriate distribution (e.g., tourist information centers) and included in an issue of area newspapers during early July 1986.

Safety Evaluation Report, Supplement No. 1, Open Item

Item 13.3.2.9, "Accident Assessment", for the NRC Safety Evaluation Report, Supplement No. 1 carries an open item listed on page 13-10 as follows:

"The applicant must submit to the NRC descriptions of the post-accident sampling system, the in-plant iodine instrumentation and the effluent sampling and analysis system".

In Reference (b), we provided information to the Staff on some remaining details of our post-accident sampling system. Included in Reference (b) is a revised FSAR Section 1.9 for Task II.B.3, "Post-Accident Sampling Capability (NUREG-0737)", for which the response lists all the references for the details of our implementation of this requirement.

Our response to II.F.1, Attachment 2, "Sampling and Analysis of Plant Effluents", and III.D.3.3, "Improved In-Plant Iodine Instrumentation Under Accident Conditions", is provided in FSAR Section 1.9 with references to the specific sections of the FSAR that contain the required information.

We trust this provides the additional information/clarification requested by the Staff and request that the acceptability of the enclosed, where applicable, be reflected in the upcoming supplement to Seabrook's SER.

Very truly yours,

  
John DeVincentis  
Director of Engineering
