S Burdandara

SCANA Corporation is a diversified holding company with a history in the traditional electric and gas utility business, tracing its predecessor companies back to 1846. In addition to its core utility businesses, the Company is now engaged in fiber optic telecommunications, computer software, real estate acquisition and development, and industrial and commercial construction. While SCANA continues to explore new reas of interest, the Company is committed to its utility foundation and growth in electric and gas ervices.

Notice of Annual Meeting

The 1987 Annual Meeting of Stockholders of SCANA Corporation will be held in Columbia. South Carolina on Wednesday. April 22 The meeting will convene at 10:00 a m. at Seawell's at the Fairgrounds. 1200 Rosewood Drive Proxies will be mailed to stockholders in March. Stockholders who are unable to attend the Annual Meeting should return their proxies promptly by mail

Fellow Stockholders:

John A. Warren Chairman and Chief Executive Officer

This past year was filled with many successes for SCANA Corporation and its subsidiaries. Financially, earnings per common share were \$3.03, an increase of 7.4% over 1985. The dividend on common stock was increased 3.6% on January 28, 1987, to an indicated annual rate of \$2.32. The dividend has been increased 34 times in the last 35 years. Supporting the excellent 1986 operating results were significant accomplishments having very positive long range implications.

The number of electric customers served by South Carolina Electric & Gas Company exceeds 406,500. an increase of 3.2%. While this rate of growth may fall slightly in the next few years, we believe that continued customer growth will occur. Expansion of existing industries and movement of new industry to South Carolina continues to improve our industrial base, resulting in increased opportunities for residents in our service area.

The V. C. Summer Nuclear Station operated at a capacity factor of 92 4% during the year, the fifth best rate in the nation. The plant continues to receive favorable evaluations from various regulatory bodies. In March 1987, the plant will begin a planned outage to refuel for another 16-month period of production.

South Carolina Electric & Gas Company lowered its retail electric rates approximately 3% effective February 1, 1987, to pass on to its customers the cost savings which will result from reduced income tax rates recently legislated by the U. S. Congress. It has been three years since the last retail electric rate increase. During this period, electric rates actually have been reduced four times to reflect lower costs of fuel in addition to the latest 3% reduction. No electric rate increases are contemplated presently.

In 1984, the Public Service Commission removed from retail electric rate base the cost of 400 megawatts of generating

capacity. Since the 1984 order, demand on the Company's electric system has grown to the extent that inclusion of the 400 megawatts will give the Company approximately the same reserve margin it had (after excluding the deducted capacity) in 1984. The Company has filed an application to restore the cost of the 400 megawatts to the rate base. After considering the current cost of capital, this can be accomplished without an increase in retail electric rates.

South Carolina Pipeline Corporation had a very successful year while coping with increased competition from oil in industrial markets. Despite oil prices which went as low as \$10 per barrel, Pipeline was able to acquire supplies on the spot market and sell them at prices which kept most industrial customers using natural gas. Pipeline's demonstrated ability to operate effectively in highly competitive markets will be a significant asset should natural gas markets experience further deregulation.

Our diversification efforts continue. During December 1986, MPX Systems. Inc. our fiber optic subsidiary, reached profitability. We currently have \$27.5 million invested in this technology, of which \$15 million is in fiber optic cable installations and \$12.5 million is in the common stock of SouthernNet. Inc., a regional, facilities-based telecommunications company. Based on the over-the-counter market quotation for SouthernNet common stock, the Company's investment has a value of \$20 million. We believe that these investments will continue to have profitable growth in the coming years.

Our subsidiaries. South Carolina Real Estate Development Company. Inc. and Primesouth. Inc. (a newly created construction company), recently joined forces to win the bid for development and construction of a facility in Charleston for the South Carolina Research Authority. The Authority has contracted with a consortium of business groups and research institutions at the leading edge in the field of computer integrated manufacturing. This facility, estimated to cost \$12 million, will be used by the Authority for testing of manufacturing techniques for electronic and small metal parts for the U. S. Navy. When completed in July 1988, this facility will bring the latest in manufacturing technology to South Carolina.

As can be seen from the examples above, the objective for our diversification program is to create stockholder value through the utilization of SCANA's capital and human resources. While we have made promising starts in several areas, it will be several years before these efforts fully mature.

A major element of our continuing cost containment strategy is the Bonus Incentive Program implemented in the past year for all permanent employees. It was designed to focus the efforts of all employees toward a common goal of controlling costs, and included specific objectives for significant reductions in budgeted operating expenses, control of overtime and achievement of other quantified operating goals. Remarkable results were achieved, which benefitted customers and stockholders as well as employees. This plan has been continued for 1987.

There are two proposals in SCANA's 1987 proxy statement which are intended to strengthen the Company's ability to protect the stockholders' interest in the event of a hostile takeover attempt. One proposal is a "fair price" amendment which would prohibit acceptance of a two-tier takeover offer unless approved by 80% of the common shares outstanding. This is designed to ensure that the Company's stockholders would all receive the same price in the event of a takeover. The second proposal would create a classified Board of Directors who individually would be elected for three year terms. In effect, one-third of the Board

would be elected each year. A complete description of these proposals will be contained in the proxy statement, which will be separately mailed to stockholders of record March 5, 1987.

Three directors will retire as of the Annual Meeting of Stockholders in April. John H. Lumpkin has been a director for 21 years. William R. Bruce for 9 years and J. E. Schachte, Jr. for 21 years. They served with distinction during the years of construction of the V. C. Summer Nuclear Station, the difficult periods of rate increases and, more recently, the restructuring of the Company into SCANA. Their counsel will be missed. Lawrence M. Gressette, Jr., President of SCANA, and Thomas C. Nichols, Jr., President of South Carolina Electric & Gas Company, have been nominated to serve as directors.

Our plans for the next few years are straightforward. We will continue to emphasize customer satisfaction through rate stability, cost containment, and system reliability in our regulated businesses. We will operate our nuclear plant at the highest possible capacity factor but always with the highest degree of safety and reliability. Our diversification efforts will intensify, as we build on the promising start we have made. Finally, we will continue our commitment to be a strong corporate citizen, utilizing our resources to continue the progress of South Carolina, and to meet the human needs of the residents of our area.

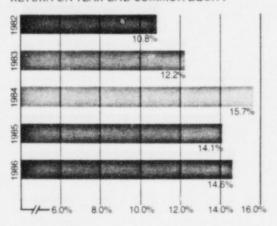

Lawrence M. Gressette, Jr. President

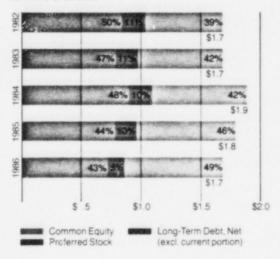

former M. Amustof.

February 6, 1987

RETURN ON YEAR-END COMMON EQUITY

CAPITAL STRUCTURE (billions of dollars)

Earnings and Dividends Consolidated net income for SCANA Corporation (the "Company") totaled \$122.2 million in 1986, up from \$113.6 million in 1985. Earnings per share of common stock in 1986 were \$3.03 compared to \$2.82 in 1985. The improvement was due to a combination of factors including higher sales of electricity, lower total operating expenses and reduced interest and preferred dividend charges.

SCANA's 1986 earnings provided a return on year-end common equity of 14.6% compared to 14.1% at year-end 1985. At year-end 1986, SCANA's capital structure consisted of 43% long-term debt, 8% preferred stock and 49% common equity. There were approximately 40.3 million shares of common stock outstanding at year-end 1986, unchanged since year-end 1984, and no offerings of common stock are planned in the near future.

During the year, SCANA's common stock traded at prices ranging from a low of \$27-1/8 to a high of \$42-7/8. The stock closed the year at a price of \$36-5/8, up from \$27-7/8 at year-end 1985. Book value per share of common stock was \$20.77 at year-end 1986, up from \$20.01 at year-end 1985. The market-to-book ratio at year-end 1986 was 176%.

In January 1987, SCANA's Board of Directors raised the quarterly cash dividend on common stock to 58 cents per share from 56 cents per share. The increase, effective with the dividend payable on April 1, 1987, raised the indicated annual dividend rate to \$2.32 per share, up from \$2.24. The Company has increased the dividend rate on its common stock in 34 of the last 35 years.

For a detailed discussion of 1986 operating results and financial condition. refer to "Management's Discussion and Analysis of Financial Condition and Results of Operation" beginning on page 44

Diversification The Company extended the scope of its operations with the creation of SCANA Software Services, Inc. in June 1986 and Primesouth, Inc. in January 1987. Activities of each of the Company's subsidiaries are highlighted later in this report. SCANA now has 11 direct and 2 indirect wholly-owned subsidiaries that are engaged in a variety of traditional utility as well as non-utility businesses.

Two of SCANA's major corporate goals are the diversification of risk and the development of unregulated lines of business with the potential for higher returns than are possible in its regulated utility businesses. In evaluating new ventures, the Company will continue to focus on activities that utilize existing management expertise. SCANA will make capital commitments only to new enterprises that the Company believes have the potential to make a meaningful contribution to earnings within a few years of start-up.

SCANA's present non-utility subsidiaries are not expected to have a significant impact on the Company's financial picture for several years. For the immediate future, the electric and natural gas utility businesses will continue to dominate SCANA's overall performance, with capital investment, earnings and cash flow primarily driven by the requirements and performance of South Carolina Electric & Gas Company (SCE&G), its principal subsidiary. In its utility operations, SCANA's primary objective is to provide the highest quality of service to customers at the low est possible cost. At the same time. SCANA will look to other business activities to optimize the investment of its shareholders

South Carolina Electric & Gas Company

9.1. Hichor f.

T.C. Nichols, Jr. President

SCANA's principal subsidiary, SCE&G, generates and sells electricity, buys and sells natural gas at retail and operates public transit systems in the metropolitan Columbia and Charleston areas. SCE&G serves over 406,500 electric customers in the central and southern portions of the state, an area of more than 12,000 square miles with a total population approaching 2 million. SCE&G also serves approximately 192,800 natural gas customers across two-thirds of the state. At year-end 1986, SCE&G had 3,912 full-time employees, up. 3% over 1985

As a result of increased emphasis on cost control, SCE&G reduced budgeted operating and maintenance expenses in 1986 by approximately 3.1%. Also in 1986, SCE&G offered an early retirement program that is expected to result in savings of an estimated \$5 million over the next five years.

SCE&G's Energy Info Centers were honored with a national conservation award in November. The U.S. Department of Energy recognized the centers for their role in providing the public with assistance, education and information relating to energy conservation. Approximately 293,000 people visited the two centers in 1986.

Responding to a Changing Environment

The electric utility marketplace is undergoing major changes brought on by emerging competition from other suppliers and alternative energy sources. In addition to providing reliable service at a reasonable price. SCE&G recognizes that the key to remaining competitive in this environment is developing a better understanding of what the customer wants and positioning itself to meet this challenge in innovative ways.

A cultural change is taking place internally Instead of viewing SCE&G simply as a traditional electric and gas utility, employees are learning to market comfort and convenience through the sale of electricity and natural gas. Everyone is being asked to be a salesperson. To enhance industrial relations, for example, during 1986 all SCE&G officers made personal visits on a monthly basis to large manufacturing and service customers. This program will be expanded in 1987. Also in 1987, all employees will be asked to introduce their friends and neighbors to special services SCE&G offers to its customers, such as security lighting and equal payment billings

Recognizing the necessity of being a market-driven organization, SCE&G reorganized its marketing department during 1986 to include detailed market research and sales training functions. Formal sales teams were also established in each of the district offices to help satisfy customer needs and provide support for new consumer-oriented programs like "Good Cents."

Good Cents is a nationally syndicated program that encourages energy efficiency in the construction and selection of heating and cooling equipment in new homes. According to market surveys, 86% of SCE&G's residential customers consider energy efficiency very important in the purchase of a new home Good Cents homes automatically qualify for SCE&G's special electric conservation rate, and Good Cents homeowners can save up to 50% in monthly heating and cooling bills over conventionally built homes. If successful, conservation programs such as Good Cents can help SCE&G postpone the need for costly new generating plants

An important advancement in customer relations occurred in November, when more than two years of market research culminated in the unveiling of a new bill. Consumer panels played a big part in determining the new format, which gives customers detailed information about how their bill is calculated and the date and time their meter is read. Consumer acceptance was excellent.

Construction Expenditures SCE&G's cash expenditures for construction amounted to \$133.6 million in 1986 compared to \$117.3 million in 1985. Expenditures for electric facilities were \$88.3 million while \$16.7 million was expended on gas facilities. An additional \$15.8 million was spent for nuclear fuel. Expenditures to build and upgrade other facilities accounted for the remaining \$12.8 million SCE&G's construction cash expenditures in 1987 are projected to total \$169.1 million, including approximately \$25.5 million for nuclear fuel.

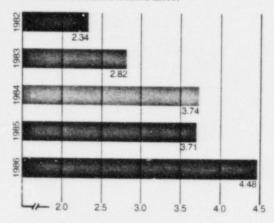

SCE&G continued to place emphasis on customer communication, implementing an industry visitation program by officers. Senior Vice President Cathy B.

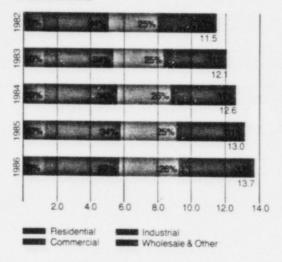

Novinger toured the Aiken County Pepperidge Farm facility to gain a better understanding of its energy needs and growth potential:

EARNINGS COVERAGE OF FIXED CHARGES-SEC METHOD

(times covered before income taxes)

TOTAL ELECTRIC SALES (billions of KWH)

Security Transactions For the second consecutive year, internal generation of cash and short-term borrowings were sufficient to provide for substantially all of SCE&G's 1986 capital requirements. To further reduce interest and preferred dividend charges, SCE&G continued its program of retiring high-cost debt and preferred stock issues prior to maturity.

The following capital transactions occurred during 1986:

- In February, SCE&G redeemed, at par, \$14.11 million of the \$50 million principal amount outstanding of its 12.15% Series First and Refunding Mortgage Bonds due June 1, 2010.
- In April, South Carolina Electric & Gas Finance, N.V. redeemed the entire \$60 million principal amount outstanding of its 15-1/2% Guaranteed Notes due 1989 at a price of 101% of par value. These Notes were secured by the pledge of SCE&G's First and Refunding Mortgage Bonds. This wholly-owned subsidiary of SCANA was dissolved during 1986.
- In June, SCE&G raised \$1... c., iion through the sale of tax-exempt annual tender Pollution Control Revenue Bonds issued by Fairfield County, South Carolina. Proceeds of this sale were used to finance construction of additional pollution control facilities at the V. C. Summer Nuclear Station;
- In July, SCE&G redeemed two outstanding series of cumulative preferred stock. The issues retired with the entire \$13.5 million par value of the 10-3/4% Series at a redemption price of 104.84%, and the entire \$20 million par value of the 11.08% Series at a redemption price of 10.8%.

Short-term capital needs during 1986 were satisfied through the sale of commercial paper. At year-end 1986, SCE&G had \$78.2 million in commercial paper obligations outstanding. South Carolina Fuel Company, a wholly-owned subsidiary of SCANA that finances SCE&G's inventories of nuclear and fossil fuel. had \$70.1 million in commercial paper obligations outstanding at year-end 1986.

SCE&G's earnings coverage of fixed charges in 1986 was 4 48 times, up from 3.71 times in 1985.

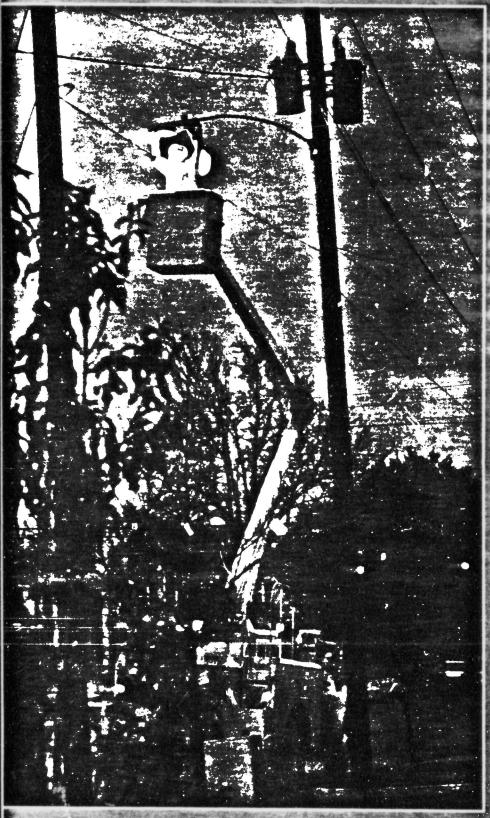

On February 18, 1987, SCE&G sold \$100 million principal amount of First and Refunding Mortgage Bonds, 8-3/4% Series due 2017. Proceeds from this sale were used to reduce SCE&G's short-term indebtedness. The remainder of SCE&G's 1987 cash requirements is expected to be provided by internally generated funds and short-term borrowings. If market conditions permit, SCE&G may issue additional long-term debt during the year to retire higher cost securities.

Regulation and Rate Activity SCE&G did not request a general rate increase in its retail or wholesale electric or natural gas jurisdictions during 1986. In accordance with state regulatory requirements, SCE&G filed during 1986 for adjustments in the fuel cost component of its retail electric rates. These adjustments resulted in a lowering of the fuel component in retail electric rates, the fourth such reduction since the V. C. Summer Nuclear Station began commercial operation in 1984 SCE&G's last general retail electric rate increase was granted in the spring of 1984.

In January 1987, The Public Service Commission of South Carolina (PSC) directed SCE&G to reduce its retail electric rates by approximately 3% to reflect a reduction in the corporate federal income tax rate that takes effect on July 1, 1987 under provisions of the Tax Reform Act of 1986 The PSC's order requires SCE&G to pass the resulting tax savings on to its retail electric customers. The lower rates, which became effective in February 1987, will result in a reduction in SCE&G's retail electric revenues of approximately \$25 million annually However, the combined effects of reduced taxes and lowered rates will not have a significant impact on net income.

Based on the recent growth in demand on its electric system. SCE&G filed an application with the PSC on January 30. 1987 requesting, among other things, that 400 megawatts of electric generating capacity deducted from rate base in a March 2. 1984 PSC rate order be restored to rate base effective July 1, 1987 SCE&G did not request a change in its retail electric rates currently in effect. Although the changes, if approved by the PSC, would result in a lower earned return on equity. SCE&G believes this action to be in the best interests of its ratepayers and SCANA's stockholders.

See Notes 1E and 2B of "Notes to Consolidated Financial Statements" for additional information.

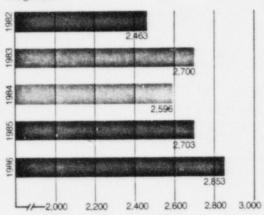

Replacing traditional mercury vapor street lamps with state-of-the-art high pressure sodium lamps can more than double the light output without increasing the cost of the fixture or the required energy input.

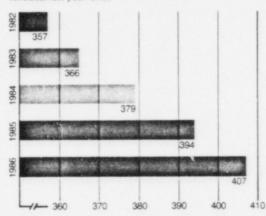

As part of its customer satisfaction strategy, SCE&G is actively promoting this type of lamp in the

residential and municipal market.

ELECTRIC TERRITORIAL PEAK DEMAND (megawatts)

TOTAL NUMBER OF ELECTRIC CUSTOMERS (thousands: year-end)

ELECTRIC OPERATIONS

Record Peak Demand SCE&G's historical peak demand record was broken four times during 1986. Peak demand is the maximum requirement for electricity placed on the system by customers during any one-hour period. Record peaks were established lanuary 27 and again January 28 as arctic air rushed into South Carolina. The record fell again July 8 in the midst of one of the state's worst heat waves in nearly a century Temperatures climbed above the 100-degree mark for 15 straight days, and the all-time record demand of 2.853 MW was set July 9.

Sales and Customers Systemwide electricity sales totaled 13.7 billion kilowatt-hours (KWH) in 1986, an increase of 5.1% over 1985. January's extremely cold temperatures and the summer's extended heat wave contributed to this growth. Residential and commercial sales rose 10.8% and 7.0%, respectively, while industrial sales were up .7%. Wholesale and other energy sales decreased 2.9% due to the loss of a large cooperative customer early in the

For the third year in a row, SCE&G experienced a record increase in the number of new electric customers. At year-end 1986, 406,511 electric customers were being served, up 3.2% from year-end 1985. The majority of growth occurred in the residential and commercial classes. Based on the latest projections, SCE&G's customer growth is expected to average 2% annually through 1991. Total electric sales growth during the same period should average about 3.8% annually

Generation and Capacity SCE&G purchases all of the electricity generated at A.M. Williams Station, a 560 MW unit near Charleston owned by South Carolina Generating Company, Inc. (GENCO), a wholly-

owned subsidiary of SCANA.

The average 1985 fossil heat rate of 9.918 BTU/KWH placed SCE&G's generating system (includes GENCO's Williams Station) in seventh place in the latest rankings of the country's 100 largest investorowned utilities by Electric Light & Power magazine. SCE&G's continuing record of generating efficiency is especially noteworthy because of the large percentage of relatively small plants on its system. The forced outage rate was also significantly better than the national average.

Total generation for the system in 1986, including GENCO, was 15.3 billion KWH, an increase of approximately 3.1% over 1985. Coal-fired plants accounted for 63%, nuclear 31%, hydroelectric 5% and oil

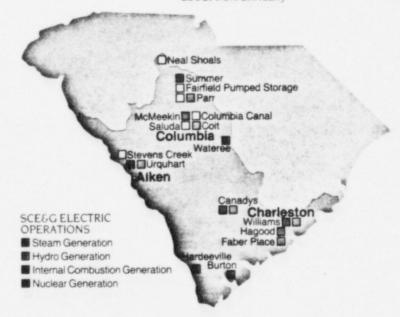

and natural gas 1%

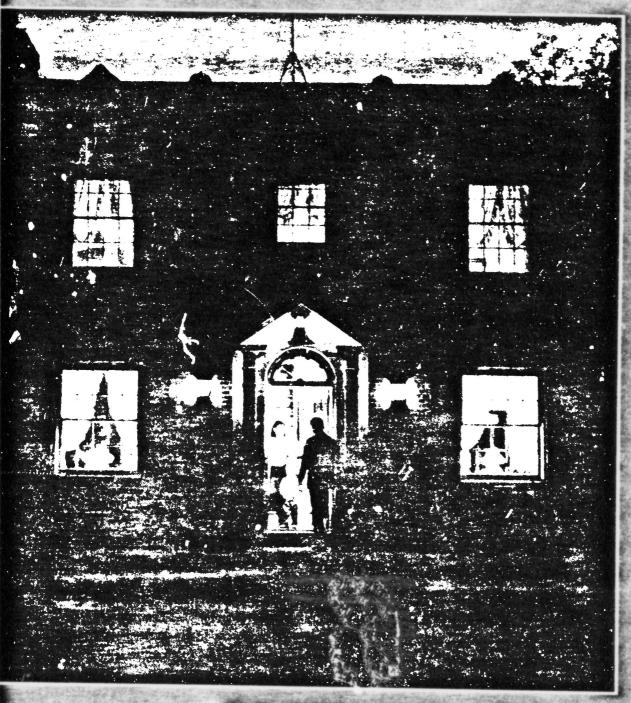

Coal-fired plants in the SCE&G system burned a total of 3.7 million tons of coal in 1986, a 7.8% decrease from 1985. The weighted average cost of the coal burned in 1986 was \$1.84 per million BTU. compared to \$1.95 per million BTU in 1985. About 80% of projected coal requirements in 1987 are under long-term contract.

SCE&G's peak generating capability was 3.890 MW as of lanuary 1, 1987. Coal-fired generation accounted for 56% of that capacity, hydroelectric 20%, nuclear 15%, oil-fired 2%, and 7% was in 16 internal combustion peaking turbines and one combined-cycle plant which burn either No. 2 fuel oil or natural gas.

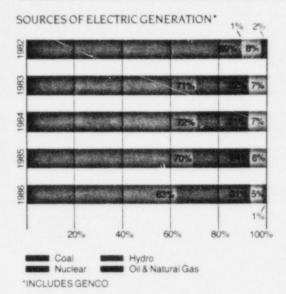

System Improvements SCE&G spent approximately \$15 million in 1986 as part of an on-going life-extension program for its generating facilities. About \$13.5 million is budgeted in 1987 for additional improvements. Keeping these older plants in service will result in substantial savings by postponing the need for costly new generating facilities.

Other system improvements focused primarily on preventive maintenance of substation equipment. Actions were also taken to ensure quicker response to power outages and to provide more effective technical assistance to field personnel.

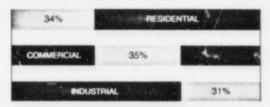

The Good Cents program was introduced in late 1986. By year's end 100 Good Gents homes were under construction and two were already completed and certified. Over 50 company employees were trained to help sell the homebuilding program which will be marketed intensively in 1987.

SCE&G'S SALES OF NATURAL GAS BY CUSTOMER CLASS FOR 1986 (% of total therm sales)

Nuclear Operations V.C. Summer Nuclear Station was ranked among the top five nuclear plants nationwide in a key area of operating performance in 1986 by Nucleonics Week magazine. The unit's capacity factor, the amount of electricity a plant actually produces compared to the maximum it can produce, was 92.4%. The average annual capacity factor for U.S. nuclear plants is about 60%.

One of the reasons for Summer Station's high capacity factor in 1986 was a longer fuel cycle, which eliminated the need for a refueling outage during the year. Summer Station was converted from a 12-month refueling cycle to an 18-month cycle in 1985. The next refueling outage is scheduled for March 1987 and is expected to last about two months.

The Nuclear Regulatory Commission (NRC) levied two fines of \$50,000 each against SCE&G for violations during 1986 of technical specifications at Summer Station. In both occurrences, SCE&G discovered and reported the violations to the NRC. Both of the violations are the lowest level for which a civil penalty is assessed, and the NRC determined that the events surrounding the fines were insignificant from a safety standpoint. However, extensive corrective actions were taken to prevent their recurrence.

In August, the Institute of Nuclear Power Operations (INPO) formally recognized Summer Station as a branch of the National Academy of Nuclear Training. INPO has fully accredited the operator training programs at the plant, signifying they meet the industry safety group's standard of excellence. The first 19 graduates of the accredited programs received their certificates during the ceremonies.

The Federal Emergency Management Agency also gave final approval in 1986 to Summer Station's emergency alert and notification system.

Environmental Concerns Acid rain continued to be a controversial issue nationally in 1986. Sixteen bills were introduced in Congress, but no legislation was enacted. SCE&G has always been a proponent of a clean environment and continues to support objective legislation that would confront the acid rain issue on a region-by-region basis. The purchase of low-sulphur coal enables SCE&G's fossil plants to maintain relatively low sulphur-dioxide emissions.

NATURAL GAS OPERATIONS

Sales and Customers Total retail natural gas sales were 274.6 million therms in 1986, an increase of 3.0% over 1985. Residential and commercial sales were up 5.4% and 1.7%, respectively, while industrial sales increased 2.5%.

SCE&G serves approximately 192.800 natural gas customers in 72 cities and towns along its 5.399-mile distribution system SCE&G purchases all of its natural gas from another SCANA subsidiary. South Carolina Pipeline Corporation.

System Improvements Work continued during the year on a \$30 million project to replace more than 600 miles of mains and service connections in the Columbia area. This replacement project is expected to be completed in 1989.

Another major project was completed in the Charleston area during 1986. A new five-mile gas main serving James Island will improve service to more than 8,000 existing customers and allow SCE&G to grow along with the island's rapidly expanding residential market. In Columbia, the Lucius Road propane air peak-shaving plant was rebuilt and its capacity more than doubled to assure greater amounts of supplemental gas supplies when needed.

The renovation of the Lucius Road propane air plant has doubled its applemental gas aspability and necessed reliability of gas delivery in metropolitan Golumbia.

TRANSIT OPERATIONS

SCE&G buses traveled approximately 3.6 million miles and carried more than 8.6 million revenue passengers in Columbia and Charleston during 1986. At year-end 1986, SCE&G was operating 117 coaches on a combined route system totaling 295 miles.

In December, a new 56,000-squarefoot facility for Transit Operations and Fleet Maintenance opened in Charleston. In July, a reduced fare program required by the Urban Mass Transportation Administration (UMTA) for the elderly and handicapped that began in Charleston was expanded to include the Columbia area as

Efforts continued during 1986 to cut losses in transit operations. SCE&G upgraded its fleet by buying and refurbishing 19 coaches which replaced older ones. Numerous route revisions were made for more economical operation. SCE&G also acquired two over-the-road coaches for its charter services. Continued expansion in this area could lead to increased transit reversues in years to come

SCE&G received \$3.9 million in UMTA funds in 1986 as partial reimbursement for operating losses incurred in the Columbia area during 1981-83. With support from the involved municipalities, SCE&G will apply for an additional \$3.3 million in UMTA funds for the Columbia area. In early 1987, SCE&G accepted a \$1.2 million UMTA grant for the Charleston

SCE&G continues to work vigorously for the establishment of Regional Transportation Authorities. These publicly supported systems could reduce SCE&G's role in providing public transportation.

INDUSTRIAL DEVELOPMENT

SCE&G was again a leader in industrial recruitment as a variety of new industries moved into South Carolina in 1986. Announced capital investment for new and expanded industrial facilities totaled approximately \$1.3 billion during the year. Of that amount, about 80% will occur within SCE&G's electric and natural gas service areas. resulting in approximately 7,700 new jobs.

In January 1986, Mack Trucks, Inc. announced it would relocate an assembly plant to Winnsboro, South Carolina. The Mack facility, a Pirelli fiber optic cable plant in Lexington, and the growth and expansion of research parks in Columbia and Charleston are indicators of a new level of opportunity for the state's workforce.

CUSTOMER/COMMUNITY SERVICE PROGRAMS

Emphasis on community service programs was a key strategy again in 1986. The Customer Assistance Department helped nearly 22,000 needy customers secure \$1.63 million in financial aid from the appropriate local, state and federal agencies to help pay heating and cooling expenses.

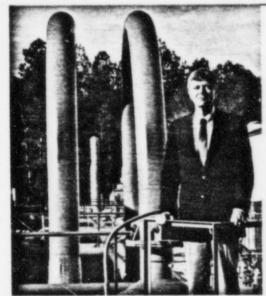

More than 14,000 SCE&G customers contributed \$148,524 to help elderly persons and low-income ramilies meet emergency heating needs through the Project SHARE program. Project SHARE is a voluntary donation program in which customers make a one-time contribution or authorize a pledged amount to be added to their monthly bills.

Also, a program to provide free firewood for the needy was expanded to include the Charleston area. Similar programs were already in place in the Columbia and Aiken/North Augusta areas These programs join SCE&G with local government and community action organizations to provide the free fuel.

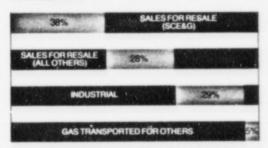

Educational Services activities
resulted in personal contact with
almost 20,000 students and
educators in the state. Programs are
available on a variety of energyrelated subjects. Young children
enjoy learning about fossil fuels in
the production of energy while older
students often use SCE&G as a
source of information for science

South Carolina Pipeline Corporation

Max Earwood
President

DELIVERIES OF NATURAL GAS BY SCPC DURING 1986 (% of total MCF)

South Carolina Pipeline Corporation (SCPC) is an intrastate natural gas pipeline with 1.657 miles of line serving resale and industrial customers in all but two of the state's 46 counties. SCPC's largest customer is SCE&G. Other resale customers include municipalities and county gas authorities, as well as other gas utilities.

SCPC has two subsidiaries. South Carolina LNG Company, Inc., liquefies and stores up to one billion cubic feet of natural gas during periods of low usage. During peak demand periods, up to 60,000 MCF per day can be regasified to supplement pipeline supplies. Carolina Exploration. Corporation is involved in joint-venture projects in the development and production of oil and gas reserves.

Sales and Customers Over the past year, natural gas companies faced intense competition for industrial customers from suppliers of other fuels, particularly No. 6 fuel oil, which was selling at its lowest price in years. Most industrial customers are equipped to use several types of fuel, allowing them to switch to the most economical energy source available. SCPC has remained competitive by increasing purchases of less expensive spot-market gas and reducing its profit margin. Because of changes in federal regulations, large customers also have the option of making purchases directly from producers at the wellhead and having the gas transported. In these instances, SCPC contracts with the customer to provide transportation services.

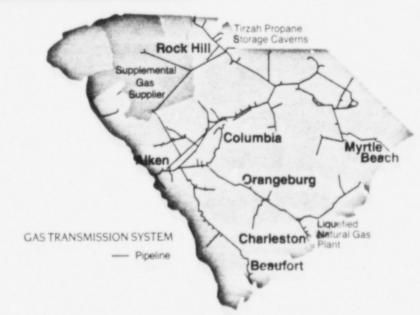

Total sales of natural gas in 1986 were 66.8 million MCF, a 3.4% increase over 1985. Industrial sales decreased by 7.1% while sales to resale customers increased 8.6%. In addition, the transportation of natural gas for resale customers and endusers totaled approximately 3.5 million MCF, more than double the 1985 level. At year-end 1986, SCPC was serving approximately 160 natural gas customers

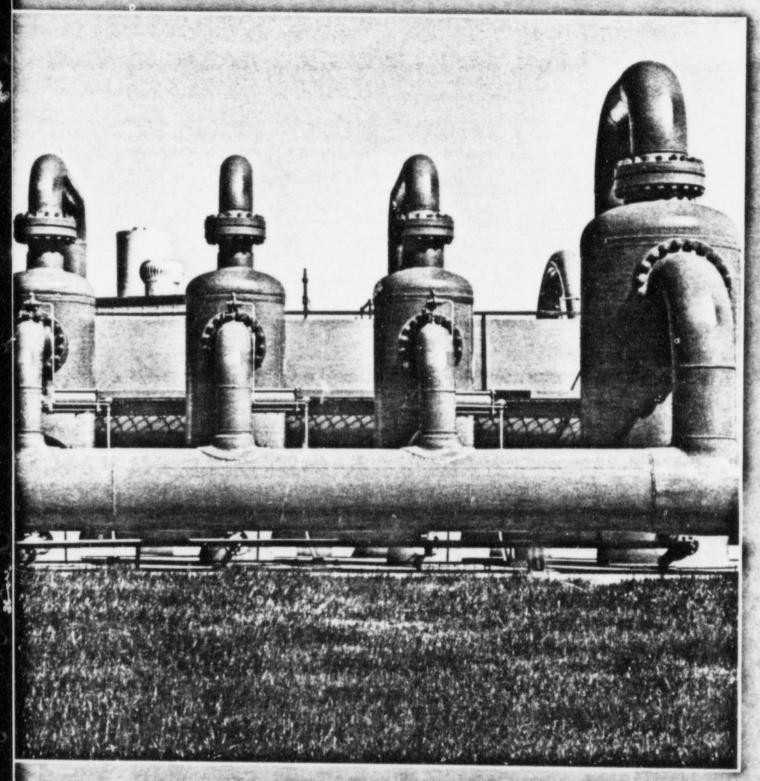

Gas Supply SCPC buys its natural gas under long-term contracts with Southern Natural Gas Company (Southern) and Transcontinental Gas Pipeline Corporation (Transco) Interconnections with these suppliers provide a reliable supply and allow flexibility in purchasing SCPC's contract demand is 210,900 MCF per day with Southern and 29,300 MCF per day with Transco

The total volume of natural gas purchased in 1986 for resale was approximately 66.5 million MCF compared with about 64.3 million MCF in 1985. The increased purchases were the result of greater customer demand and some nontraditional sales to regional natural gas authorities. The cost per MCF of natural gas purchased for resale was approximately \$3.24 in 1986, compared with about \$3.84 in 1985. This decline can be attributed to lower pipeline prices, a consequence of increased competition in the marketplace. and SCPC's ability to make substantial spot-market purchases at prices well below firm contract rates. These lower gas costs were passed along to customers.

SCPC's suppliers have not elected to operate under the provisions of the Federal Energy Regulatory Commission Order 436, issued in 1985, which would require nondiscriminatory transportation of natural gas. However, SCPC has been able to purchase and transport spot-market gas under various provisions of the Natural Gas Policy Act of 1978.

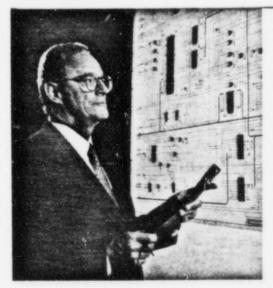

System Improvements Several steps were taken in 1986 to improve the overall efficiency of SCPC's transmission system. Certain backup equipment was added at the LNG plant to ensure its safety and reliability during periods of regasification. New fire protection systems were included at the Columbia office and at the Transcondelivery compressor station for added safety. Other system improvements included regulator upgradings and the installation of electronic monitoring, measurement and flow control equipment.

South Carolina Pipeline sold over 66 billion cubic feet of natural gas in 1986. The nompressor station in Aiken has created more flexibility in purchases from suppliers and in the delivery of natural gas.

MPX Systems, Inc.

Lawrence M. Gressette, Ir.

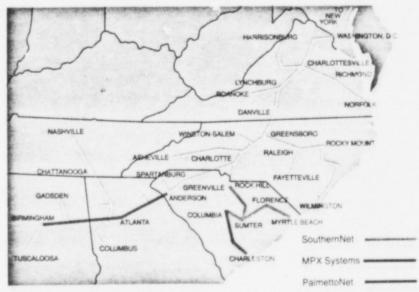

President

MPX Systems, Inc., SCANA's telecommunications subsidiary, is fast becoming an industry leader in the relatively new field of fiber optics. This technology uses thin glass fibers about the diameter of a human hair to transmit laser-generated light impulses that flash millions of times a second. The resulting digital code is then translated into sound or pictures at the receiving end of the transmission.

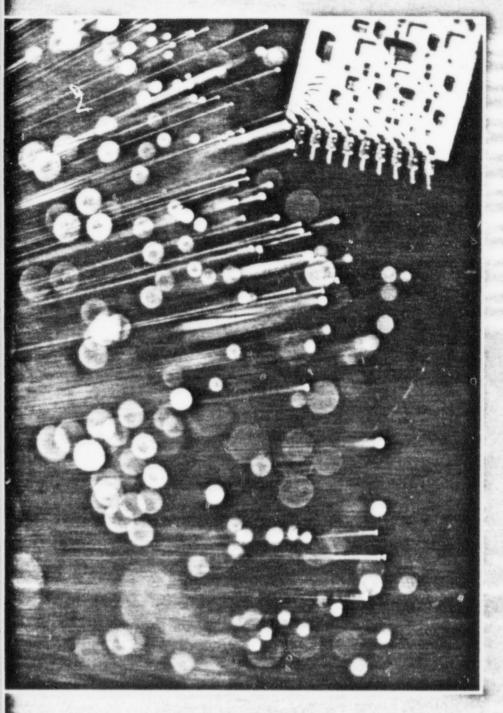

In 1985, MPX installed a 129-mile fiber optic line from Columbia to Charleston. Two new projects in which MPX is involved are joint ventures with Southern Company Services. In August 1986, work was completed on a 125-mile overhead fi-

ber optic project linking Atlanta to Hart County, Georgia, the southern terminus of a fiber optic line stretching from Washington. D C. In February 1987, a 180-mile fiber optic link between Atlanta and Birmingham was placed in commercial service, representing one of the longest overhead fiber optic projects in North America and a major engineering accomplishment.

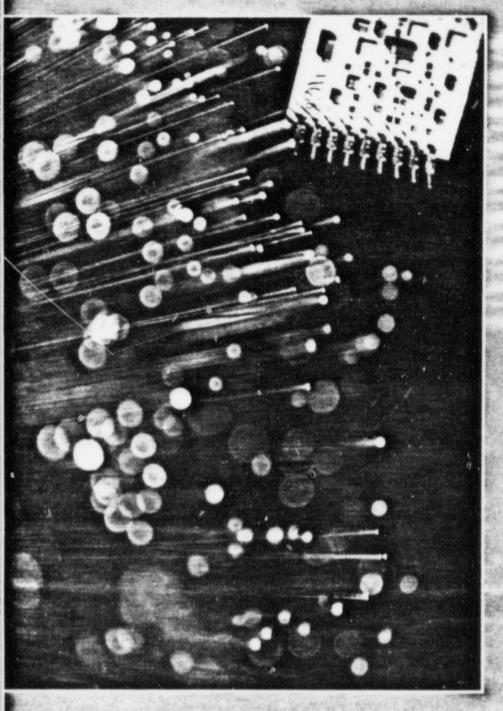

Both lines are part of Southern-Net's link in the National Telecommunications Network (NTN). MPX has a 10.2% interest in SouthernNet, an interstate carrier that provides telecommunications services from Washington, D.C. to seven southeastern states.

Transmission of noise and data by liber optic orble is nonsidered to be superior to conventional copper wire and microwave technology due to its speed expandable capacity and darily of sound and picture. MPX Systems is a leader in the development and use of fiber optics in the dividity industry.

Fransmission of voice and data by liber optic cable is considered to be superior to conventional copper wire and microwave technology due to its speed, expandable capacity and darity of sound and picture. MPX Systems is a leader in the development and use of fiber optics in the utility industry.

South Carolina Real Estate Development Company, Inc.

Welding J.W. Wedding President South Carolina Real Estate Development Company, Inc. (SCRED) is actively engaged in the acquisition and development of strategically located properties. Many of SCRED's projects can provide beneficial results for the other SCANA companies.

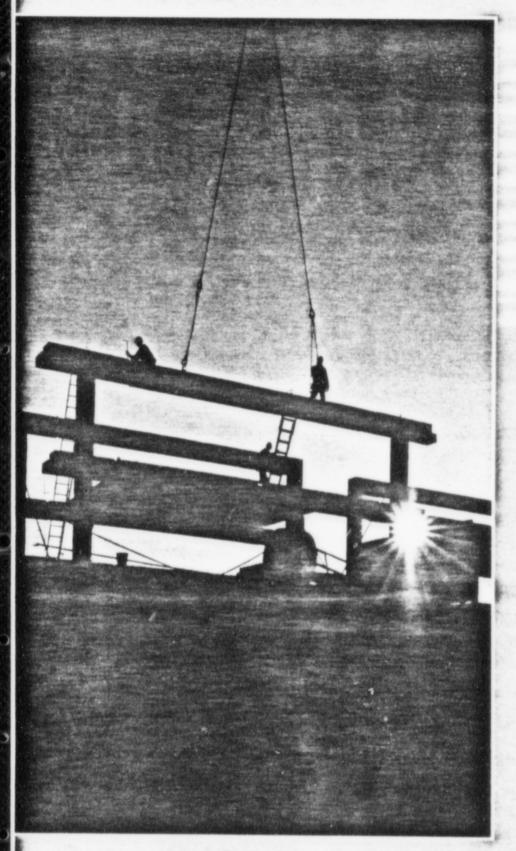

In December 1986, the S.C. Research Authority selected SCRED to develop a \$12 million facility as part of the U.S. Navy's Rapid Acquisition of Manufactured Parts (RAMP) program. Primesouth, Inc., another SCANA subsidiary, will construct the facility.

The RAMP program will involve a consortium of leading business groups and research laboratories exploring the use of computers and robotics to manufacture sophisticated replacement parts for the U.S. fleet on a timely basis, eliminating the need for large parts inventories. The selection of South Carolina as the site for this federally-funded research project is considered a coup for the state and could place South Carolina in a position of national leadership in this new manufacturing technology. This aggressive approach toward economic development will provide new jobs, protect present jobs and make possible the attraction of important new industries to the state.

SCRED is currently involved in 15 additional projects — seven independently and eight as a joint-venture partner

Work has been completed on the first phase of a business park near Charleston. A neighborhood shopping center, a residential subdivision and a 58-acre commercial site are under development in the Columbia area. In the planning stages are a mixed-use development and resort-style residential area at Lake Murray near Columbia and a residential subdivision near Lexington. South Carolina.

Other joint-venture projects include two residential developments near Columbia and an office and industrial park near Charleston. Additional commercial joint ventures are being planned.

Overlook Business Gentre upon completion of a \$5 million meter esting laboratory. The 55-acre tusiness park, located at Interdates 26 and 326 near Columbia, strong developed by SCANA absidiary, South Garolina Real Estate Development Company.

Primesouth, Inc.

E.H. Crews, Jr.

Building on SCE&G's more than 30 years' experience in construction and heavy equipment maintenance, SCANA's newest subsidiary, Primesouth, Inc., began operations January 1, 1987.

SCE&G phased out its construction department and transferred its 300 construction employees to Primesouth, a full-service organization providing design coordination, construction and construction management services.

Ground was broken in February 1987 for Primesouth's first major project, a 140,500-square-foot facility at Charleston International Airport being developed by SCRED for the U.S. Navy and the S.C. Research Authority. The RAMP facility will consist of an office building and two high-technology manufacturing and test centers. Completion of the project is scheduled for July 1988.

Primesouth will continue to pursue a variety of commercial and industrial projects and limit its construction activities to the Southeast. Primesouth will also seek industrial maintenance contracts in areas of its expertise such as boiler and condenser repairs.

Other Subsidiary Operations

SCANA Software Services, Inc.

SCANA Software Services. Inc., which began operations June 1, 1986, is engaged in the development and marketing of computer-centered information systems technology primarily for utility-related industrial clients. Initially, major systems being marketed include a Distribution Construction Information System, a Fleet Maintenance System, and a Nuclear Education and Training System. Software, hardware, software maintenance, customization services and a wide range of professional consulting and programming services are also available.

Carotane. Inc.

Carotane, Inc purchases and distributes propane to areas beyond SCE&G's natural gas mains. In 1986, it sold approximately five million gallons of propane and had more than 4,400 residential, commercial and industrial customers at year-end.

Carolina Propane Storage Corporation

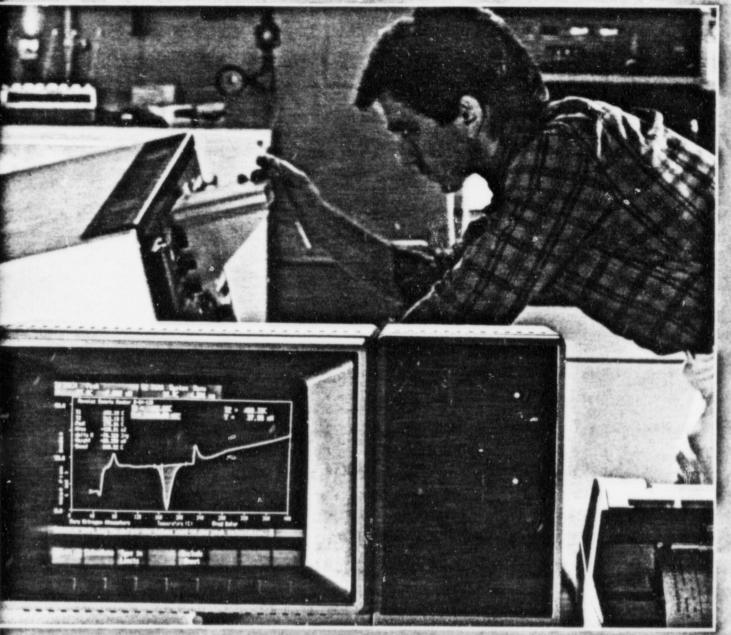

Carolina Propane Storage Corporation owns a 50% joint-venture interest together with Transco Energy Company in an 80-million-gallon underground propane storage cavern near York. South Carolina The cavern leases storage space to industries, utilities and propane suppliers. A joint-venture agreement with another subsidiary of Transco will allow for the expansion of the cavern's markets throughout the Southeast.

Carolina LPG Corporation

Carolina LPG Corporation, in a joint venture with Transco, operates a 62-mile, six-inch propane pipeline that connects the cavern facility with Dixie Pipeline Company near Bethune. South Carolina This line transports propane to industrial customers along its route and to Dixie Pipeline Company for distribution to customers along its system. New Federal Energy Regulatory Commission tariffs that went into effect October 1, 1986 substantially reduced per-barrel shipping costs and should spur additional business opportunities.

SCANA Software Services is taking advantage of years of experience in computer technology and program development gained through operations at SCESCO his SCANA subsidiary is developing and aggressively marketing information systems technology designed to improve the productivity and efficiency of its dients.

SCANA Software Services is taking advantage of years of experience in tomputer technology and program development gained through operations at SCESCAThis SCANA subsidiary is developing and aggressively marketing information systems technology designed to improve the productivity and efficiency of its clients.

FINANCIALS

SCE&Gfinancial officers, left to

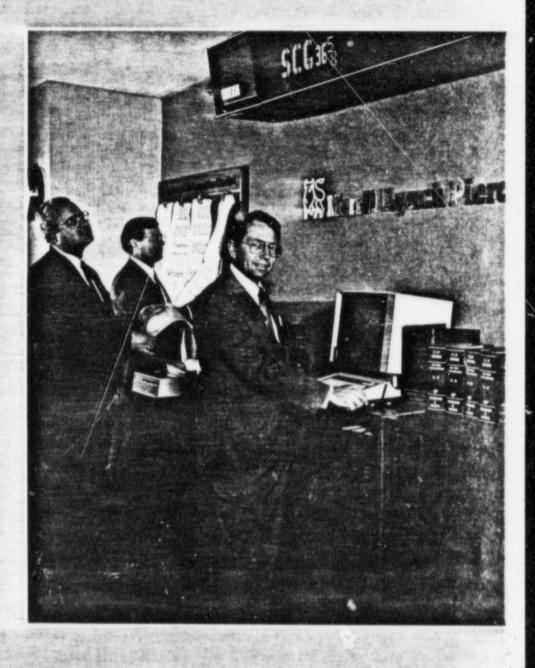

right: Robert W. Stedman, Vice

President and Controller, B. Tate

Horton, Jr. Treasurer, and William

B. Timmerman, Senior Vice

President/Finance.

The Management of SCANA Corporation (the Company) is responsible for the preparation and integrity of the financial data included in the accompanying Consolidated Financial Statements. These statements have been prepared in conformity with generally accepted accounting principles as applicable. In situations that prevent exact accounting measurements. management has used informed judgments and estimates. Financial information presented elsewhere in this Annual Report is consistent with these financial statements.

The Company maintains and relies upon a system of internal accounting controls which is designed to provide reasonable assurance that all transactions are properly recorded in the books and records and that assets are protected from unauthorized use. The degree of internal accounting control is based upon the determination of the optimum balance between the cost incurred in maintaining a system of internal controls and the benefits to be derived. The system of internal accounting controls is supported by written policies and guidelines and is complemented by the selection, training and development of professional financial managers and by a staff of internal auditors who conduct comprehensive internal audits.

The Board of Directors, through an Audit Committee composed of nonemployee directors, provides oversight for the preparation of these financial statements. The Audit Committee meets periodically with internal and independent auditors and representatives of management to review their activities and responsibilities. The internal and independent auditors have full and free access to the Audit Committee to discuss internal accounting control, auditing and financial reporting matters.

The independent certified public accounting firm of Deloitte Haskins & Sells is engaged to examine, in accordance with generally accepted auditing standards, and to report as to the fair presentation of Management's Consolidated Financial Statements and their opinion appears below

W. B. Timmerman Vice President & Treasurer

Opinion of Independent Certified Public Accountants

Deloitte Haskins-Sells

Suite 820 1426 Main Street Post Office Drawer 7128 Columbia. South Carolina 29202-7128

SCANA CORPORATION

We have examined the Consolidated Balance Sheets and Consolidated Statements of Capitalization of SCANA Corporation and consolidated subsidiaries ("Companies") as of December 31, 1986 and 1985 and the related Consolidated Statements of Income and Retained Earnings and of Sources of Funds for Gross Property Additions for each of the three years in the period ended December 31, 1986. Our examinations were made in accordance with generally accepted auditing standards and, accordingly, included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, such Consolidated Financial Statements present fairly the consolidated financial position of the Companies at December 31, 1986 and 1985 and the results of their operations and the changes in their financial position for each of the three years in the period ended December 31, 1986, in conformity with generally accepted accounting principles applied on a consistent basis.

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES:

A. Organization and Principles of Consolidation

SCANA Corporation (the Company), a South Carolina corporation was organized in 1984 by South Carolina Electric & Gas Company (SCE&G) and acquired all of the issued and outstanding common stock of SCE&G under a Plan of Exchange effective December 31, 1984, whereby the holders of the common stock of SCE&G automatically became the holders of all the outstanding shares of common stock of the Company on a share-for-share basis. The Preferred Stock of SCE&G continues to be held by nonaffiliated parties. The Company is a public utility holding company within the meaning of the Public Utility Holding Company Act of 1935, but is exempt from registration under such Act.

The accompanying Consolidated Financial Statements reflect the consolidation of the accounts of the Company and its wholly-owned subsidiaries.

Regulated utilities

South Carolina Electric & Gas Company

South Carolina Generating Company, Inc. (GENCO)

South Carolina Pipeline Corporation (Pipeline Corporation)

which wholly-owns South Carolina LNG Company, Inc. and

Carolina Exploration Corporation

South Carolina Fuel Company, Inc.

Non-regulated businesses

Carolina LPG Corporation

Carolina Propane Storage Corporation

Carotane, Inc.

South Carolina Real Estate Development Company, Inc.

MPX Systems, Inc.

SCANA Software Services, Inc.

Primesouth. Inc.

South Carolina Electric & Gas Finance, N.V. (Finance, N.V.)

During 1986, Finance, N.V., which had obtained funds outside the United States for use in financing the activities of SCE&G and Pipeline Corporation, was dissolved and liquidated (see Note 3).

Investments in joint ventures are reported using the equity method of accounting. Significant intercompany transactions have been eliminated in consolidation.

B. System of Accounts

The accounting records of the Company's regulated subsidiaries are maintained in accordance with the uniform system of accounts prescribed by the Federal Energy Regulatory Commission (FERC) and as adopted by The Public Service Commission of South Carolina (PSC).

C. Utility Plant

Utility plant is stated substantially at original cost. The costs of additions, renewals and betterments to utility plant, including direct labor, material and indirect charges for engineering, supervision, and an allowance for funds used during construction, are added to utility plant accounts. The original cost of utility property retired or otherwise disposed of is removed from utility plant accounts and generally charged, along with the cost of removal, less salvage, to accumulated depreciation. The costs of repairs, replacements and renewals of items of property determined to be less than a unit of property are charged to maintenance expense.

SCE&G, operator of the V. C. Summer Nuclear Station (Summer Station), and the South Carolina Public Service Authority (a public corporation of the State of South Carolina) are joint owners of Summer Station in the proportions of two-thirds and one-third, respectively. The parties share the costs of operating the plant and in energy output in these proportions. The total cost of the construction of Summer Station was approximately \$1.3 billion, or about \$1,461 per kilowatt, of which SCE&G's share was approximately \$877 million. Accumulated depreciation associated with SCE&G's share of Summer Station was approximately \$96.1 million and \$62.2 million as of December 31, 1986 and 1985, respectively. SCE&G's share of the direct expenses associated with operating Summer Station is included in the Company's "Other operation" and "Maintenance" expenses.

D. Allowance for Funds Used During Construction

Allowance for funds used during construction (AFC), a noncash item, reflects the period cost of capital devoted to plant under construction. This accounting practice results in the inclusion, as a component of construction cost (construction work in progress), of the costs of debt and equity capital dedicated to construction investment. AFC will ultimately be included in rate base investment in establishing rates for utility services. The Company's regulated subsidiaries calculated AFC using the following rates:

	1986	1985	1984
SCE&G	6.3%	9.5%	6.5%
GENCO	5.3%	5.7%	
Pipeline Corporation	8.6%	9.5%	6.5%

These rates do not exceed the maximum allowable rate as calculated under EERC Order No. 561. Interest on nuclear fuel is capitalized at the actual interest amount.

E. Deferred Return on Plant Investment

Carrying costs (including equity return) associated with approximately \$114.8 million (\$104.4 million at December 31, 1986) of production investment, net of accumulated depreciation, associated with 400 MW of electric generating capacity removed from rate base are being deferred at SCE&G's approved overall rate of return of 11.74% for recovery over some future period pursuant to a March 2, 1984 PSC rate order (see Note 2B)

In December 1985, the Financial Accounting Standards Board (FASB) issued an exposure draft which would amend Statement No. 71 "Accounting for the Effects of Certain Types of Regulation" to include certain criteria for recognizing deferrals of current operating costs, including carrying costs, associated with investments in operating utility plant.

In December 1986, the FASB issued Statement No. 90, "Regulated Enterprises-Accounting for Abandonments and Disallowances of Plant Costs". This Statement, which addresses certain aspects of the FASB's earlier exposure draft, does not specifically address accounting recognition of deferrals associated with investments in operating utility plant. The FASB has indicated that it will continue to consider this aspect of the December 1985 exposure draft.

The future recovery of SCE&G's deferred return on plant investment as set forth in the PSC's March 2, 1984 rate order or as proposed in SCE&G's Application dated January 30, 1987 (see Note 2B) may not meet the criteria proposed in the December 1985 exposure draft. If the FASB were to adopt such criteria in their current form, and absent the necessary modification of the March 2, 1984 rate order, the Company could be required for accounting purposes to restate its financial statements in order to eliminate the deferred return on plant investment. The effect of such restatement would be to reduce reported earnings per share for 1986. 1985 and 1984 by 31c, 32c and 28c, respectively. It is uncertain if the FASB will issue a final statement that specifically addresses deferral of costs associated with operating utility plant and what, if any, criteria will be established for accounting recognition of such deferrals.

F. Depreciation and Amortization

Provisions for depreciation are recorded using the straight-line method for financial reporting purposes and are based on the estimated service lives of the various classes of property. The composite weighted-average depreciation rates were 3.38%, 3.35% and 3.41% for 1986, 1985 and 1984.

Nuclear fuel amortization, which is included in "Fuel used in electric generation" and is recovered through SCE&G's cost of fuel, is recorded using the units-of-production method. Provisions for amortization of nuclear fuel include amounts necessary to satisfy obligations to the United States Department of Energy under a contract for disposal of spent nuclear fuel.

The acquisition accurate mentioned the purchase of certain gas properties in 1982 is being amortized over a forty-year period using the straight-line method.

G. Nuclear Decommissioning

Decommissioning of Summer Station is projected to commence in the year 2014, and the expenditures (on a bufore-tax basis) related to decommissioning activities are currently estimated to be approximately \$211 million (in 2014 dollars). SCE&G is providing for estimated decommissioning costs over the life of Summer Station and has established a reserve for this purpose SCE&G is presently funding the reserve with amounts collected through electric rates (approximately \$.83 million annually, net of taxes), and intends for the fund, including earnings, to provide for all eventual decommissioning expenditures on an after-tax basis.

H. Income Taxes

The Company and its subsidiaries file consolidated Federal and State income tax returns. Income taxes are allocated to all subsidiaries based on their contributions to consolidated taxable income.

The Company provides deferred income taxes for substantially all timing differences, principally accelerated depreciation, except for certain basis differences arising prior to 1981. Deferred income tax provisions are included in income currently with corresponding credits or charges to accumulated deferred income taxes. Deferred income taxes are credited or charged to income in appropriate amounts when subsequent income tax liabilities are greater or less as a result of this practice.

Investment tax credits on eligible property are generally deferred and amortized over the useful lives of the respective assets.

I. Pension Expense

The Company has a noncontributory defined benefit plan covering all employees of its subsidiaries. The Company's policy is to fund pension costs accrued. Total pension expense, including the amortization of unfunded prior service cost over a ten-year period, for 1986, 1985 and 1984 was approximately \$10.4 million, \$8.3 million and \$12.9 million, respectively. The decreases in 1986 and 1985 pension expense compared to 1984 are largely attributable to the dedication of certain plan assets to satisfy future retirement benefit obligations to all employees retired prior to June 1983, with a resulting decrease in the unfunded prior service cost obligation.

The actuarial present value of accumulated plan benefits and plan net assets as of the most recent benefit information date are as follows:

1986	1985	
(3.4:11)		
(Millions of Dollars)		
\$ 80.2	\$ 68 5	
7.4	6.6	
45.5	50 2	
\$133.1	\$125.3	
\$134.9	\$107.9	
	\$ 80.2 7.4 45.5 \$133.1	

The assumed rate of return used in determining the actuarial present value of accumulated plan benefits was 7% for 1986 and 1985, except for dedicated assets (Retirees prior to June 1983) which are valued at 11%.

In December 1985, the FASB issued Statement No. 87, "Employers' Accounting for Pensions". Statement No. 87, which is generally effective for fiscal years beginning after December 15, 1986, requires the use of a standardized method of measuring net periodic pension expense. Upon adoption of this Statement, certain changes will be required in actuarial assumptions and the manner in which net periodic pension expense is measured. The Company has chosen not to apply the provisions of the Statement prior to its effective date. The Company does not believe that application of Statement No. 87 in 1987 will have a significant effect on its results of operations or financial position.

J. Revenue Recognition

Customers' meters are read and bills are rendered on a monthly cycle basis. Base revenue is recorded during the accounting period when the meters are read.

Revenue attributable to gas costs (to the extent collectible through adjustment clauses) is accrued and recorded in the month during which the customers' meters are read rather than when the revenue is billed.

Projected fuel costs for electric generation are collected through the fuel component in retail electric rates, as established by the PSC during semiannual fuel cost hearings. Any differences between actual and projected fuel costs are deferred and included when estimating the fuel cost component during the next semiannual fuel cost hearing. At December 31, 1986, SCE&G had collected approximately \$i.6 million through the electric fuel clause component, which is included in "Deferred Credits—Other".

K. Debt Premium, Discount and Expense

Long-term debt premium, discount and expense are being amortized as components of "Interest on long-term debt, net" over the terms of the respective debt issues.

L. Reclassifications

Certain amounts in the financial statements of prior years have been reclassified to conform with 1986 classifications.

2. RATE MATTERS:

A. On December 22, 1986, SCE&G filed with the PSC a report which described the anticipated income tax savings associated with the Tax Reform Act of 1986 based on the results of operations for the year ended December 31, 1985. On January 15, 1987, the PSC directed SCE&G to reduce its retail electric rates approximately \$25 million annually, or 3%. On January 19, 1987, SCE&G filed revised retail electric rate schedules with the PSC which were subsequently approved by an order dated January 29, 1987. The revised rates were placed into effect with the first billing cycle in February 1987.

B. As part of a March 2, 1984 order, the PSC removed from rate base approximately \$114.8 million, (\$104.4 million at December 31, 1986) of average production investment, net of accumulated depreciation, associated with 400 MW of electric generating capacity. However, the order allowed carrying costs, computed on the basis of the approved overall rate of return (11.74%), associated with the removed investment to be deferred and recovered over some future period. The order also allowed the recovery, currently through rates, of all operating expenses, including depreciation and property taxes, associated with the 400 MW of electric generating capacity.

On January 30, 1987, SCE&G filed an Application with the PSC for approval to restore to its rate base, effective July 1, 1987, the 400 MW of electric generating capacity previously removed and to also include the associated accumulated deferred carrying costs. SCE&G also requested that accumulated deferred carrying costs (\$36.4 million at December 31, 1986) be amortized over a ten-year period commencing July 1, 1987. There has been no action by the PSC in response to SCE&G's Application. (See Note 1E.)

C. As a result of a PSC order dated March 2, 1984, SCE&G recorded approximately \$15 million (20c per share, of which 14c and 4c relate to amounts billed in 1983 and 1982, respectively) as nonrecurring electric revenues in March 1984.

D. On October 28, 1985, the South Carolina Supreme Court upheld a circuit court ruling that allows the State Consumer Advocate to appeal approximately \$34 million of the March 2, 1984 order of the PSC granting SCE&G approximately \$132.6 million annually in increased retail electric rates. While the outcome of this matter is uncertain, the Company believes the probability of any significant change in the rate order is unlikely and accordingly, has not recorded any provision for refunds.

E. On December 26, 1984, GENCO filed with the FERC a cost of service formula rate for the sale of power and energy to SCE&G. Under a contract with GENCO, SCE&G purchases all of the electric power generated by the A. M. Williams Station, which is owned by GENCO. During October 1985, a partial settlement was reached prior to a formal hearing on the remaining issues before an Administrative Law Judge. On February 20, 1986, the Administrative Law Judge issued an initial decision on the remaining issues. Briefs on exceptions to the Administrative Law Judge's decision have been filed with the FERC. The Company believes that the outcome of the proceedings will not have any significant effect on the Company's consolidated financial statements.

LONG-TERM DEBT (See Note 11):

The Fairfield County Series 1984 (Annual tender – \$57 million, due September 1, 2014), Richland County (Annual tender – \$5.5 million, due September 1, 2014) and Fairfield County Series 1986 (Annual tender – \$1.1 million, due September 1, 2014) Pollution Control Facilities Revenue Bonds are secured by like principal amounts of SCE&G's First and Refunding Mortgage Bonds. The Fairfield County Series 1984 and Richland County Bonds bear interest at the rate of 5.5% per annum through August 31, 1987. The Fairfield County Series 1986 Bonds bear interest at a rate equal to 65% of a prime rate but not more than 15% per annum through August 31, 1967 (4.875% at December 31, 1986).

The Berkeley County Pollution Control Facilities Revenue Bonds (Annual tender – \$35,850,000, due October 1, 2014) are secured by an irrevocable letter of credit expiring in 1991. The Bonds bear interest at the rate of 4,55% per annum through September 30, 1987.

After the interest rate periods described above, the Bonds will bear interest at a rate, which will be set between 80% and 120% of an index rate based on one-year yield evaluations of comparable tax-exempt obligations, or 65% of one-year yield evaluations of U.S. Treasury Bonds at par. but, in any case, not more than 15% per annum. The interest rate shall be adjusted annually or become fixed until maturity. These Bonds also provide that the holders may require the Bonds to be purchased at par upon each annual adjustment of the interest rate or at the time the interest rate becomes fixed until maturity. If the Bonds are tendered by the holders, the Company intends to reoffer the Bonds to the public. Due to the irrevocable letter of credit for the Berkeley County Bonds and provisions of the Fairfield County Series 1984. Richland County, Fairfield County Series 1986 and Berkeley County Bond Indentures, which permit the Company to purchase the Bonds in lieu of redemption and resell them, and to substitute other security arrangements, the Bonds are classified as long-term debt

On January 22, 1986, the Company's Board of Directors authorized the early redemption of the entire \$60 million principal amount outstanding of the 15-1/2% Guaranteed Notes of Finance, N.V., due 1989. The Notes were redeemed on April 15, 1986 at a price of 101% of par value.

On February 20, 1986, SCE&G redeemed at par, prior to maturity. \$14,110,000 principal amount of its 12.15% Series First and Refunding Mortgage Bonds due 2010. Restricted cash totaling \$14.11 million was on deposit with the Trustee at December 31, 1985, and was available for redemption of bonds. The note repayment, bond redemption and the restricted cash at December 31, 1985 was reflected in "Current portion of long-term debt, net," as follows.

	Thousands of Dollars
Long-term debt maturities, including	
sinking fund requirements	\$ 30,348
Note repayment and bond redemption	74.110
Total	104,458
Less restricted cash deposit	14.110
Current portion of long-term debt. net	\$ 90.348

The annual amounts of long-term debt maturities, including the amounts due under nuclear and fossil fuel agreements (see Note 4), and sinking fund requirements for the calendar years 1987 through 1991 are summarized as follows:

Year	Amount	Year	Amount	
	(Thousa	nds of Dollars)		
1987 1988 1989	\$21.930 97.403 81.258	1990 1991	\$27,334 17,533	

Approximately \$9.2 million of the current portion of long-term debt for 1987 may be satisfied by either deposit and cancellation of bonds issued upon the basis of property additions or bond retirement credits, or by deposit of cash with the Trustee.

Substantially all utility plant and fuel inventories are pledged as collateral in connection with long-term debt.

4. FUEL FINANCINGS:

Nuclear and fossil fuel inventories are financed through the issuance of short-term commercial paper. These short-term borrowings are supported by irrevocable bank lines of credit which expire in 1989. Accordingly, the amounts outstanding have been included in long-term debt. The bank lines provide for maximum amounts (\$75 million related to nuclear fuel and \$25 million related to fossil fuel) that may be outstanding at any time.

At December 31, 1986, the amount outstanding for nuclear fuel was approximately \$53.0 million at a weighted average interest rate of 6.88% and the amount outstanding for fossil fuel was approximately \$17.1 million at a weighted average interest rate of 6.35%.

STOCKHOLDERS' INVESTMENT (Including Preferred Stock Not Subject to Purchase or Sinking Funds):

The changes in "Common Stock", without par value, during 1986, 1985 and 1984 are summarized as follows:

	Number of Shares	Thousands of Dollars
Balance January 1, 1984 Additional Shares issued	38,727,652	\$546,927
Stock Purchase-Savings Program for Employees Employee Stock Ownership Plan	211,915 9,012	3.829 170
Dividend Reinvestment and Stock Purchase Plan Other	1.348,709	23,973 364
Balance December 31, 1984 Other	40.296.147	575.263 343
Balance December 31, 1985 Other	40,296,147	575,606 (1,364)
Balance December 31, 1986	40,296,147	\$574,242

In May 1984, the Trustee for the Company's employee stock benefit plans began purchasing previously issued and outstanding shares of the Company's common stock in the open market. Commencing with the lanuary 1, 1985 dividend payment, an independent agent for the Company's Dividend Reinvestment and Stock Purchase Plan began purchasing shares in the open market. Prior to the above dates for each Plan, all shares purchased pursuant to each Plan were shares originally issued for that purpose

The Restated Articles of Incorporation of the Company do not limit the dividends that may be payable on its common stock. However, the Restated Articles of Incorporation of SCE&G and the indentures underlying certain of its bond issues contain provisions that limit the payment of cash dividends on common stock. Accordingly, \$231.8 million of consolidated retained earnings were not restricted as to payment of cash dividends on common stock at December 31, 1986.

Cash dividends on common stock were declared at an annual rate per share of \$2.24, \$2.16 and \$2.05 for 1986, 1985 and 1984, respectively.

During 1986, SCE ~G redeemed 2,332 shares of its 8.40% cumulative preferred stock, \$100 par value.

6. PREFERRED STOCK (Subject to Purchase or Sinking Funds):

The call premium of the respective series of preferred stock in no case exceeds the amount of the annual dividend. Retirements under sinking fund requirements are at par values.

At any time when dividends have not been paid in full or declared and set apart for payment on all series of preferred stock. SCE&G may not redeem any shares of preferred stock (unless all shares of preferred stock then outstanding are redeemed) or purchase or otherwise acquire for value any shares of preferred stock except in accordance with an offer made to all holders of preferred stock. SCE&G may not redeem any shares of preferred stock (unless all shares of preferred stock then outstanding are redeemed) or purchase or otherwise acquire for value any shares of preferred stock except out of monies set aside as purchase funds or sinking funds for one or more series of preferred stock, at any time when it is in default under the provisions of the purchase fund or sinking fund for any series of preferred stock.

On May 27, 1986, SCE&G's Board of Directors called for the redemption of all the issued and outstanding shares of two series of that company's cumulative preferred stock. In July 1986, all 135,000 shares outstanding of the 10-3/4% Series, \$100 par value were redeemed at a price of 104.84%, and all 200,000 shares outstanding of the 11.08% Series, \$100 par value were redeemed at a price of 108%.

The aggregate annual amounts of purchase fund or sinking fund requirements for preferred stock for the years 1987 through 1991 are summarized as follows:

Year	Amount	Year	Amount	
	(Thousand	s of Dollars)		
1987 1988 1989	\$ 5,298 12,515 14,515	1990 1991	\$ 7,515 7,515	

The changes in "Preferred Stock (Subject to Purchase or Sinking Funds)" during 1986, 1985 and 1984 are summarized as follows:

	Number of Shares	Thousands of Dollars
Balance January 1, 1984 Shares Redeemed	2,302,086	\$160,604
\$100 par value 50 par value	(20.400) (35,500)	(2.040)
Balance December 31, 1984 Shares Redeemed	2,246.186	156.789
\$100 par value 50 par value	(20,550) (44,408)	(2.055)
Balance December 31, 1985 Shares Redeemed:	2,181,228	152,514
\$100 par value 50 par value	(343,070) (13,300)	(34,307)
Balance December 31, 1986	1,824,858	\$117,542

7. INCOME TAXES:

Total income tax expense for 1986, 1985 and 1984 is as follows:

	1986	1985	1984
	(Thousands of Dol	lars)
Current income taxes:			
Federal	\$82,637	\$ 57,680	\$ 5,767

Other, net	(2,116)	(2.786)	(359)
Total provision for deferred income taxes, net	\$33,635	\$42 497	\$92.801

The Company's Federal income tax returns have been examined by the Internal Revenue Service through 1981 and have been closed through 1980. A final report has been received for 1981 and all issues resolved, except those pertaining to Investment Tax Credits generated in 1982 and carried back to 1981.

The Internal Revenue Service is currently examining the consolidated Federal income tax returns of SCANA and SCE&G for 1982 through 1984. No report relating to the present examination has been received. However, the Company does not anticipate any significant effect on its results of operations or financial position.

At December 31, 1996, the cumulative net amount of income tax timing differences on which deferred taxes have not been provided totaled approximately \$110 million.

8. SHORT-TERM BORROWINGS:

The Company pays fees to banks as compensation for its lines of credit. Bank loans are for 270 days or less. Details of lines of credit and short-term borrowings at December 31, 1986, 1985 and 1984 and for the years then ended are as follows:

	December 31.			
		1986	1985	1984
	(Dollars in Millions)			lions)

Other	\$.13	\$ 14	\$ 5
Weighted average interest rate		9.50%	9 50%	11 22%

9. COMMITMENTS AND CONTINGENCIES:

A. Leases

The Company leases certain equipment, office furniture and an office building used for its corporate headquarters under long-term operating leases with lease terms (excluding various renewal options) expiring in 1996, 1991 and 2009, respectively.

In connection with the office building lease, dated October 1984, the Company may be required to purchase a 10% Note and Mortgage on the building in the amount of \$44 million in 1989. The Company pays, as additional rent, any amount by which a current index rate (8.685% at December 31, 1986) exceeds the 10% Note and Mortgage rate. Also, the Company is reimbursed any amount by which the 10% Note and Mortgage rate exceeds the current index rate.

Total rent expense was approximate by \$4.4 million, \$5.0 million and \$2.0 million for 1986, 1985 and 1984, respiratively.

Future minimum rental payments as of December 31, 1986 are as follows:

Amount	Year	Amount	
(Thouse	ands of Dollars)		
\$4.850	1990	\$ 7.124	
5.029	1991	5.820	
6,935	1992-2009	117,381	
	(Thouse \$4,850 5,029	(Thousands of Dollars) \$4,850 1990 5,029 1991	(Thousands of Dollars) \$4.850

B. Nuclear Insurance

The Price-Anderson Indemnification Act (the Act) currently limits the liability for third-party claims related to an accident at a utility's nuclear generating facility to \$695 million per accident. The Act provides that all owners of nuclear reactors may be assessed up to \$5 million per reactors owned for each nuclear accident occurring at any reactor in the United States with a limit of two assessments per year (a retroactive premium). The Company's maximum exposure, based on its two-thirds ownership of Summer Station, would be approximately \$6.7 million per year under this legislation.

The Act is scheduled to expire in August 1987 and Congress is considering several proposals to amend the present Act. The Company is unable to predict what actions Congress may ultimately take and what effects such actions may have on the Company's potential liability.

The Company currently maintains policies with Nuclear Electric Insurance Limited (NEIL) and American Nuclear Insurers (ANI) providing combined property and decontamination insurance coverage of \$695 million for any losses in excess of \$500 million pursuant to existing primary coverages (with ANI) on Summer Station. The Company pays annual premiums and, in addition, could be assessed a retroactive premium not to exceed 7-1/2 times its annual premium, in the event of property damage loss to any nuclear generating facilities covered by NEIL. Based on the current annual premium, this retroactive premium would be approximately \$5.5 million.

To the extent that insurable claims for property damage, decontamination, repair and replacement and other costs and expenses arising from a nuclear incident at Summer Station exceed the policy limits of insurance, or to the extent such insurance becomes unavailable in the future, and to the extent that the Company's rates would not recover the cost of any purchased replacement power, the Company retains the risk of loss as a self-insurer. The Company has no reason to anticipate a serious nuclear incident at Summer Station. If such an incident were to occur, it could have a materially adverse impact on the Company's financial position.

10. SEGMENT OF BUSINESS INFORMATION:

Segment information at December 31, 1986, 1985 and 1984 and for the years then ended is as follows:

		198	6

11. SUBSEQUENT EVENTS:

On February 9, 1987, the State Consumer Advocate petitioned the PSC to require SCE&G to make additional reductions in its retail electric rates based on data for the year 1986 to reflect the reduction of tax expense resulting from provisions of the Tax Reform Act of 1986. The reductions previously authorized by the PSC in January 1987 were based on the results of operations for the year end. December 31, 1985 (see Note 2A). The Company intends to file the updated data as soon as it becomes available. The State Consumer Advocate also requested that the PSC, after opportunity for hearing, issue its rule to show cause why the PSC should not order a reduction in the Company's authorized rate of return on equity, cost of debt, cost of preferred stock, and overall authorized rate of return. The Company's annot presently predict whether the PSC will issue its rule to show can be concerning the rate of return.

On Figure 18, 1987, SCE&G issued and sold \$100,000,000 principal amount of First and Refunding Mortgage Bonds 8-3/4% Series due February 1, 2017. These bonds are part of \$200,000,000 principal amount of SCE&G's First and Refunding Mortgage Bonds registered under the Securities Act of 1933, pursuant to Rule 415, under a Registration Statement which is effective July 1986 through July 1988.

The principal market for SCANA common stock is the New York Stock Exchange (stock symbol-SCG).

⁽a) As reported on the New York Stock Exchange Composite Listing.

Management's Discussion and Analysis of Financial Condition and Results of Operation

LIQUIDITY AND CAPITAL RESOURCES

The capital needs of the Company arise primarily from the capital requirements of SCE&G's operations and construction program. Because rates for regulated services are based on historical cost amounts, to the extent inflation occurs and rates are not appropriately adjusted on a timely basis, the Company's regulated subsidiaries will not be allowed an opportunity to recover the costs of providing services. Therefore, the Company's future financial position and results of operations could be impacted by any future inflationary trends.

The ability of the Company's regulated subsidiaries to replace existing plant investment, as well as to expand to meet future demand, will likely depend upon its ability to attract the necessary financial capital on reasonable terms. The ability to attract such capital could, in turn, depend upon the subsidiaries' ability to obtain adequate and timely rate relief.

Continued growth in the Company's non-utility operations, along with future economic expansion throughout the utility service territory, could have a positive impact on total Company earnings.

The primary cash requirements for 1986 were, and as estimated for 1987 are, as follows:

	1987	1986
	(Thousands	of Dollars)
Construction expenditures, excluding allowance for funds used during		
construction (AFC)	\$156,790	\$125,090
Nuclear fuel expenditures	25,529	15,806
Maturing obligations, redemptions and		
sinking and purchase fund requirements	18.000	144,477
Total	\$200,319	\$285,373

During 1986, approximately 57 3% of total cash requirements were provided from internal sources as compared to 89.7% in 1985. External funds for 1986 were provided through the issuance of \$78.2 million short-term commercial paper and the sale of \$1.1 million in tax-exempt annual tender pollution control facilities revenue bonds.

The Company anticipates that 1987 cash requirements will be met primarily through internally generated funds, short-term borrowings and the sale of commercial paper. Actual 1987 construction and nuclear fuel expenditures may vary from the estimates set forth above due to factors such as inflation and economic conditions, regulation and legislation, rates of load growth, environmental protection standards and the cost and availability of capital.

On February 18, 1987, SCE&G sold \$100 million principal amount of First and Refunding Mortgage Bonds, 8-3/4% Series due February 1, 2017, for net proceeds of \$98,078,000. The net proceeds were used to repay a like amount of short-term indebtedness outstanding at the date of sale. Such short-term indebtedness had been incurred to prepay or pay at maturity long-term debt and to redeem preferred stock during 1986.

SCESG presently has in effect a shelf registration statement under which it can issue an additional \$100 million of First and Refunding Mortgage Bonds. Whether additional securities will be sold and the timing and amount of such sales will depend primarily upon market conditions and other factors in existence at the time.

For information relating to operations of the Company's subsidiaries see 1986 Year In Review beginning on page 6.

RESULTS OF OPERATIONS

Earnings and Dividends

Earnings per share of common stock (based on the weighted average number of shares outstanding), the percent increase (decrease) from the previous year and the rate of return earned on common equity for the years 1984 through 1986 were as follows:

	1986	1985	1984
Earnings per share	\$3.03	\$2.82	\$3.05
Percent increase (decrease) in earnings per share	7.4%	(7.5%)	33.2%
Return earned on common equity (year-end)	14.6%	14.1%	15 7%

Earnings per share increased from 1985 primarily as a result of higher electric energy sales related to the 1986 summer heat wave, lower interest charges and reduced dividend requirements on preferred stock associated with the early redemption of two issues of SCE&G's preferred stock (see Note 6 of Notes to Consolidated Financial Statements).

The decrease in earnings per share for 1985 was primarily attributable to the recording of a nonrecurring gain of 20c per share in March 1984 (see Note 2C of Notes to Consolidated Financial Statements) and a decrease in AFC (see discussion below) and decreased sales of natural gas in 1985. In addition to the nonrecurring gain recorded in 1984, the increase in earnings per share during 1984 reflects various rate increases placed in effect during 1984 and 1983 and improved electric and natural gas sales.

AFC is a utility accounting practice whereby a portion of the cost of both equity and borrowed funds used to finance construction (which is shown on the balance sheet as construction work in progress) is capitalized. Both the equity and the debt portions of AFC, excluding nuclear fuel, are noncash items of nonoperating income which have the effect of increasing reported net income by their full amounts. AFC, excluding nuclear fuel, represented approximately 2% of Earnings. Available for Common Stock in 1986 and 1985, decreasing from approximately 9% for 1984. The decline in AFC reflects a reduction in construction expenditures primarily relating to the V. C. Summer Nuclear Station completed and transferred to plant in service in 1984.

The Company also records carrying costs (including equity return) associated with the production investment, net of accumulated depreciation, relating to 400 MW of electric generating capacity removed from rate base as a result of a March 2, 1984 rate order of the PSC (see Notes 1E and 2B of Notes to Consolidated Financial Statements). Total carrying costs, a noncash item included under "Other Income" as "Deferred return on plant investment", are being deferred for recovery over some future period and represent approximately 10%, 11% and 9% of Eamings Available for Common Stock for the years 1986, 1985 and 1984, respectively.

In January 1987, the Company's Board of Directors raised the quarterly cash dividend on common stock to 58 cents per share from 56 cents per share. The increase, effective with the dividend payable on April 1, 1987, raised the indicated annual dividend rate to \$2.32 per share, up from \$2.24. The Company has increased the dividend rate on its common stock in 34 of the last 35 years.

Operating Revenues

Revenues from the sale of electric energy increased \$21.7 million (2.8%) and \$41.0 million (5.5%) for 1986 and 1985, primarily as a result of increased kilowatt-hour consumption by residential and commercial customers. The increased consumption was largely due to the addition of 10.584 (3.1%) and 12,539 (3.8%) residential customers and 2.092 (4.4%) and 2,287 (5.0%) commercial customers during the respective periods. The increases in revenues were partially offset by revenue adjustments relating to changes in the cost of fuel, which is a component in electric base rates. If actual fuel costs are higher or lower than those projected, the differences are recorded as increases or decreases, respectively, in operating revenues.

On January 21, 1985, the Company established a record peak demand for electricity of 2,703 MW, surpassing the previous record of 2,700 MW set on August 22, 1983. During 1986, the Company's peak demand record was broken four times. Record peaks were set on January 27 and January 28 as a result of unusually cold temperatures. On July 8, 1986, in the midst of one of the state's worst heat waves in nearly a century, the record fell again and on July 9 the all-time peak demand of 2,853 MW was set.

Increases (decreases) in electric customers and megawatt-hour (MW) sales volume ϕ_2 classes of customers are presented in the following table:

Classification	Increase (Decrease) From Prior Year						
	Custom	ers	Volume (MW)				
	1986	1985	1986	1985			
Residential	10.584	12,539	434,464	113.424			
Commercial	2,092	2,287	233,748	220,986			
Industrial	(17)	(22)	31,956	53,536			
Sales for Resale	(1)	1	(59,688)	39,544			
Other	43	45	22,765	23,503			
Total	12,701	14,850	663,245	450,993			

Revenues from the sale of natural gas decreased \$29.4 million (9.2%) in 1986 and \$59.6 million (15.8%) in 1985. The decreases in revenues were primarily attributable to reductions in the cost of gas purchased from the Company's suppliers, which are passed along to customers through a purchased gas adjustment clause, and decreased unit sales to industrial customers. These unit sales decreases, approximately 7.7% and 13.1%, respectively, were mainly the result of increased competition from lower-priced alternative fuels used in certain industrial markets.

Increases (decreases) in gas customers and decatherm (DT) sales volume by classes of customers are presented in the following table:

Classification	Increase (Decrease) From Prior Year					
	Custom	ers	Volume (DT)			
	1986	1985	1986	1985		
Residential	1,442	1.148	487,447	(1,566,150)		
Commercial Industrial	(35)	290	207,888 (2,353,490)	(743,252) (4,614,441)		
Sales for Resale	-	11	4,124,761	(2.060.547)		
Total	1,939	1.458	2,466,606	(8.984,390)		

Operating Expenses

Increases (decreases) in operating expenses, excluding taxes, are presented in the following table:

	Increase (Decrease) From Prior Year		
Classification	1986	1985	
	(Millions of Dollars)		
Fuel used in electric generation Power purchased, net Gas purchased for resale Other operation and maintenance	\$(13.2) 6.0 (30.8) 8.6	\$ 5.5 (11.5) (42.5)	
Depreciation and amortization Total	\$(25.7)	12.0 S(17.4)	

The decrease in Fuel used in electric generation expense for 1986 was primarily attributable to a reduction in the average cost of fuel burned (\$1.45 versus \$1.63 per million BTU in 1986 and 1985, respectively). primarily attributable to nuclear fuel. The increase for 1985 was due primarily to increased generation as a result of greater customer demand. The increase in Power purchased, net for 1986 was largely due to decreased sales of electricity to other utilities. The decrease for 1985 results primarily from increased sales of electricity to other utilities. The decreases in Gas purchased for resale expense for 1986 and 1985 reflect reductions in the cost of gas purchased from the Company's suppliers. The decrease in 1985 was also partially attributable to an overall decrease in consumption of natural gas. Other operation and maintenance expenses for 1986 increased primarily because of the settlement of certain claims relating to injuries and damages and moderate increases in other administrative and general expenses, including pension expense (see Note 1-1 of Notes to Consolidated Financial Statements). The increase for 1985 was largely due to additional operation and maintenance costs associated with the commercial operation of Summer Station, as well as increased electric distribution maintenance costs Increases in Depreciation and amortization expense for 1986 and 1985 reflect additions to plant in service, including Summer Station and the Williams Station coal conversion in 1984

Interest Charges

Interest on long-term debt decreased \$15.6 million in 1986 and \$1.9 million in 1985 compared to the respective previous years. The decreases in 1986 and 1985 result primarily from redemption, prior to maturity, of \$14.11 million (12.15% Series, due 2010) principal amount of First and Refunding Mortgage Bonds in February 1986, \$60 million principal amount of the 15-1/2% Guaranteed Notes of South Carolina Electric & Gas Finance, N.V. in April 1986, \$66.25 million (16% Series, due 2011) and \$8.3 million (15-5/8% Series, due 1987) principal amount of First and Refunding Mortgage Bonds in March and May, 1985, respectively.

Other interest expense increased \$4.0 million in 1986 and decreased \$2.1 million in 1985 compared to the respective previous years. The increase in 1986 reflects the increase in short-term borrowings during the year. The decrease in 1985 was primarily the result of interest expense recorded in 1984 which was associated with litigated revenues that had been collected subject to refund.
