*Re: Supplemental Submittal to the March 30, 1999 Response Package, Reno Creek ISL Project, TFN 2 2/309*

Dear Mr. Mooney:

Per our telephone discussion on May 5, 1999, IUSA is submitting two copies of the Supplemental Submittal to the March 30, 1999 Response Package, under cover of this letter, to the WDEQ/LQD office for review. The supplemental submittal package includes the WDEQ "Index Sheet for Mine Permit Amendments or Revisions", which lists all of the page changes for the Application and a complete description or reason for the change. All of the pages which need to be changed are also included.

The supplemental submittal is being submitted in response to questions conveyed to IUSA via telephone conversations with the WDEQ and the Nuclear Regulatory Commission. The questions concerned design criteria for facilities and pipelines to be constructed at the Reno Creek site and the need for a seismic stability analysis to be conducted on the treatment ponds.

Please contact Terry Wetz at 303-628-7798 or me at 520-643-7321 if you have any questions regarding the organization of the submittal materials.

Very truly yours,

Donn M. Pillmore  
Project Manager
