

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D.C. 20555-0001

May 14, 1999

MEMORANDUM TO: Cynthia A. Carpenter, Chief
Generic Issues, Environmental, Financial
and Rulermaking Branch
Division of Regulatory Improvement Programs
Office of Nuclear Reactor Regulation

FROM: Peter C. Wen, Project Manager *Peter C. Wen*
Generic Issues, Environmental, Financial
and Rulermaking Branch
Division of Regulatory Improvement Programs
Office of Nuclear Reactor Regulation

SUBJECT: SUMMARY OF APRIL 29, 1999, SEMIANNUAL NRR/WESTINGHOUSE
OWNERS GROUP SENIOR MANAGEMENT MEETING

The subject meeting was held at the NRC offices in Rockville, Maryland, on April 29, 1999, between representatives of the Westinghouse Owners Group (WOG) and the Office of Nuclear Reactor Regulation (NRR) staff. The purpose of the semiannual senior management meeting (SMM) is to encourage communication between NRR management and the WOG, discuss emerging issues and concerns, and give the status of the important activities of NRR and the WOG. Attachment 1 is a list of attendees, and Attachment 2 contains the WOG presentation material.

I. INTRODUCTION

Samuel Collins, Director of NRR, gave the opening remarks, stressing the importance of the SMM between the WOG and NRC. He highlighted several current issues being worked on by the staff, including the Millstone 2 restart, the Clinton restart, the D.C. Cook restart, the Watts Bar Operational Safeguard Response Evaluation activity, the Callaway electro-sleevинг, the new oversight process, decommissioning activities, the NRR licensing backlog, the risk-informed scope of assessment for the maintenance rule, 10 CFR 2.206 on the disposition of fuel leaks, 10 CFR 50.72 and 50.73 rulemaking, and the status of the final rule for 10 CFR 50.59. He also briefly discussed the recent NRR reorganization.

II. WOG PRESENTATIONS

Although the WOG works on a large number of issues at any one time, the WOG specifically addressed nine topics at the SMM: the top nozzle spring clamp screw issue, the redefinition of the large-break loss-of-coolant accident (LB LOCA) licensing basis, the status of the baffle

barrel bolting (BBB) program, the risk-informed anticipated transient without scram (ATWS) model, containment sump issues, core damage assessment guidance (CDAG) and post-accident sampling system (PASS) elimination, risk-informed technical specifications (RI-TS), the motor-operated valve (MOV) program, and probabilistic safety assessment (PSA) certification. These issues are discussed briefly herein.

Top Nozzle Spring Clamp Screw Issue: At the V.C. Summer plant on April 13, 1999, while removing fuel assemblies from the reactor core, the licensee noted that a fuel assembly was not properly latched. A video camera inspection revealed an approximate 1/8- inch gap between the hoiddown spring block assembly and the top nozzle. The problem assembly was frcm a batch of fuel that had completed two operating cycles. The WOG presented a chronological status of this event and will supply a more detailed briefing at a later Westinghouse fuel performance meeting with the staff. At the present time, the WOG believes that no operational safety issues resulted from this event.

Redefinition of LB LOCA Licensing Basis: The WOG has undertaken a program in response to Commissioner Diaz' request to redefine the LB LOCA licensing basis by eliminating it as a consideration on the basis of risk perspectives from probabilistic risk assessments/individual plant examinations (PRAs/IPEs) that show the LB LOCA is not a significant risk contributor. The WOG believes significant cost savings can be obtained without compromising safety by revising the plant licensing bases. The WOG effort began recently and will continue into 1999, and interactions with the staff will begin sometime in October 1999.

The staff commented that this effort should be performed with a risk-informed perspective, and that the WOG should persuade the industry through the Nuclear Energy Institute (NEI) to support this effort.

Status of the Baffle Barrel Bolting Program: The WOG discussed the inspections and replacement activities at the Farley, Point Beach, and Ginna facilities. WOG activities have become integrated as one aspect of a broader industry effort, the PWR Materials Reliability Project. The baffle bolt activities include hot cell evaluations of baffle bolts removed from the plants. The WOG concluded that the inspection results to date confirm its previous conclusion that baffle bolt cracking is an aging management issue and not an immediate safety concern.

The staff acknowledged the adequacy of WOG activity on this issue. The staff requested the WOG to share the hot cell result when it becomes available.

Risk-Informed ATWS Model: The WOG wants requirements for reload designs to be based less on the moderator temperature coefficient and more on risk models. A meeting between the staff and the WOG was held on December 17, 1998, to discuss this issue. In response to that meeting, the WOG is evaluating the need to enhance certain areas of the program, especially (1) consequence assessment if the reactor coolant system (RCS) pressure exceeds 3,200 psi and (2) detailed assessment of large early release frequency (LERF). The WOG questioned the need to perform detailed LERF assessments for events with very small changes in core damage frequency (CDF).

The staff commented that guidance has been provided in Regulatory Guide 1.174 and that if the Δ CDF is sufficiently below the Δ LERF criterion, an explicit assessment of conditional LERF need not be performed.

Containment Sump Issues: The concern here is the generation of debris after the LOCA, which has a potential of clogging the containment sump screen. The WOG discussed the position of the PWR Owners Groups (PWR OGs) on the use of leak before break (LBB) on this issue. The WOG believes that by using LBB, the General Design Criterion (GDC) 4 would allow it to exclude dynamic effects associated with postulated pipe ruptures in evaluating the debris generation. In a previous meeting held on December 15, 1998, the staff did not endorse this interpretation by the PWR OGs, and stated that the issue will be explored further as part of GSI-191.

The WOG is actively participating with NRC to address this issue. It has supported phenomena identification and ranking table (PIRT) panels on both the sump blockage and the coatings issues by providing people to serve on the panels. The WOG also attended NRC public meetings on the sump blockage and coatings issues.

The staff acknowledged the WOG's involvement in this issue and would further like to see a volunteer for the WOG Reference Plants in support of NRC research on this topic.

Core Damage Assessment Guidance and PASS Elimination: The requirement for a PASS in operating reactors was introduced after the TMI accident. The purpose of the PASS was to provide the operators with information on the degree of core degradation, radioactivity release, and the general condition of the plant. The PASS was designed by various manufacturers for different licensees, but all designs had to meet the NRC requirements specified in NUREG-0737, "Clarification of TMI Action Plan Requirements." In a letter to NRC dated October 27, 1998, the WOG submitted WCAP-14986, Revision 1, "WOG Post-Accident Sampling System Requirements: A Technical Basis," for the staff's review. The WOG is hoping that some of PASS requirements can be eliminated on the basis of the analyses presented in the WCAP.

The current (1984 vintage) WOG CDAG guidance relies heavily on PASS capabilities for core damage assessment. The WOG believes that since insight has been gained in the CDA technology over the years since the development of the 1984 vantage guidance, it is time to revise the CDA methodology. The new guidance will rely on two primary indicators for assessing the type and degree of core damage: the core exit thermocouples and the containment high-range radiation monitor. Thus, CDA will not need PASS input.

Both topical reports were being reviewed by the staff at the time of this meeting.

Risk-Informed Technical Specifications: A joint NRC/ industry effort to develop a set of fully RI-TS is continuing. The WOG is supporting the industry and NRC RI-TS initiatives and will be submitting several RI-TS-related topical reports for the staff's review. The staff indicated that it preferred that submittals be sent in one at a time because this practice will more evenly distribute the staff's workload.

MOV Program: The Joint Owners Group (JOG) program was established by industry in response to Generic Letter 96-05, "Periodic Verification of Design-Basis Capability of Safety-Related Motor-Operated Valves." The WOG is one of active members of the JOG. The JOG holds a semiannual meeting with the staff to appraise the status of JOG activities. The most recent meeting was held on April 14, 1999.

The staff commented that the approach taken by the JOG/WOG on the MOV issue serves as a good example of industry and the staff working together to resolve a safety issue of interest to both.

PSA Certification: The WOG has begun a PSA certification program to perform peer review of licensees' PRAs so that they can be used in risk-informed regulation. The intent of this certification is to reduce, as much as possible, the need for staff review of PRAs. The WOG effort is very similar to the Boiling Water Reactor Owners Group (BWROG) effort, which the staff has previously examined.

The staff commented that there is a disconnect between the BWROG, ASME and the PWR OGs on this issue. NEI has recently been involved in modifying the ASME standard to ensure one process.

III. REVIEW of WOG SUBMITTALS to NRC

The current and future planned lists of WOG submittals to NRC were reviewed. The NRR staff has made significant progress in eliminating the backlog. Since the previous SMM meeting on October 27, 1998, the staff has issued six (6) SERs. A brief discussion was held on the break opening time topical report, as follows:

Break Opening Time: The WOG requested the NRC's approval of WCAP-14748, "Justification for Increasing Break Opening Times in Westinghouse PWRs," in January 1997 for generic application. The staff's approval of the WCAP was limited to the BBB program only. The staff stated in its October 1998 safety evaluation that future applications to other issues outside the BBB program will have to be reviewed on a case-by-case basis.

In a letter to NRC dated December 10, 1998, the WOG requested that the review of WCAP-14748 be continued for generic application (so that it can be applied to other items in addition to the Baffle Barrel Bolting program). The staff will further discuss the schedule and the review scope with the WOG in a conference call.

IV. NRC ITEMS

The staff gave a brief update on the status of the reactor coolant pump seal issue (Generic Safety Issue [GSI]-23). The Office of Nuclear Regulatory Research (RES) is responsible for the GSI process. There are issues associated with obtaining proprietary seal models and the corresponding costs. The staff appealed to the WOG to help resolve GSI-23. The Reactor Systems Branch is the NRR contact for this topic, and a meeting will be set up with PWR OGs to further discuss these issues.

V. CLOSING COMMENTS

In the closing comments, Brian Sheron, Associate Director of NRR, described some of the issues that need to be worked on together by the industry groups. He gave the following examples:

- Expect the staff to ask risk-related questions even if the licensee's submittal is non-risk informed. This happened when Callaway submitted a deterministic steam generator tube sleeving TS change request for the staff's review. Because of the severe accident concern related to the steam generator, the staff asked risk-related questions. The staff is drafting a paper to present its position on this issue to the Commission.
- The staff would like to engage the industry through DS 13, "Voluntary Industry Initiatives," in lieu of the generic letter process. A process for determining the threshold for these activities and an approach for confirming licensing actions are needed.
- The staff encourages utilities to reach out to their communities and make them aware of the Y2K readiness of the utilities.

Finally, a senior WOG representative commented that the WOG has seen very positive changes in NRC staff practices in recent months. He observed that the responses from the staff are more prompt and the staff reviews of the WOG WCAPs is in a more timely manner.

**WOG / NRC SENIOR MANAGEMENT
MEETING**

April 29, 1999

WESTINGHOUSE OWNERS GROUPS

WOG / NRC SENIOR MANAGEMENT MEETING

April 29, 1999

I. INTRODUCTION

- Meeting Purpose
 - WOG/NRC Information Meetings Implemented in 1992
 - Conducted on a Biannual Basis
 - Last Meeting October 27, 1998
 - Interface Meetings
 - Maintain & enhance communication channels
 - Allow for candid discussion of open issues / concerns
 - Provide major program activity update
 - Review NRC status of WOG submittals
 - Solicit NRC input to WOG program planning & prioritization process

**WESTINGHOUSE OWNERS GROUPS
WOG / NRC SENIOR MANAGEMENT MEETING**

April 29, 1999

I. INTRODUCTION - continued

- Response to 10/27/98 Meeting Action Items
 - 12/98 NRC / WOG Meeting on RI ATWS Model
 - 12/98 NRC / NEI / PWR OG Meeting on Sump Performance & Debris Generation
 - 12/10/98 BOT WCAP Resubmitted for generic approval
 - 3/99 BBB Program Status Meeting Held / Inspection Results Provided
 - Cost Benefit Analysis for PASS Elimination Provided by Wolf Creek
 - Input for Draft Rule on Reactivity Manipulations provided to NEI
 - Withdrawal of Mode 3/4 LOCA Topical by WOG
 - Withdrawal of RI IST Topicals by WOG

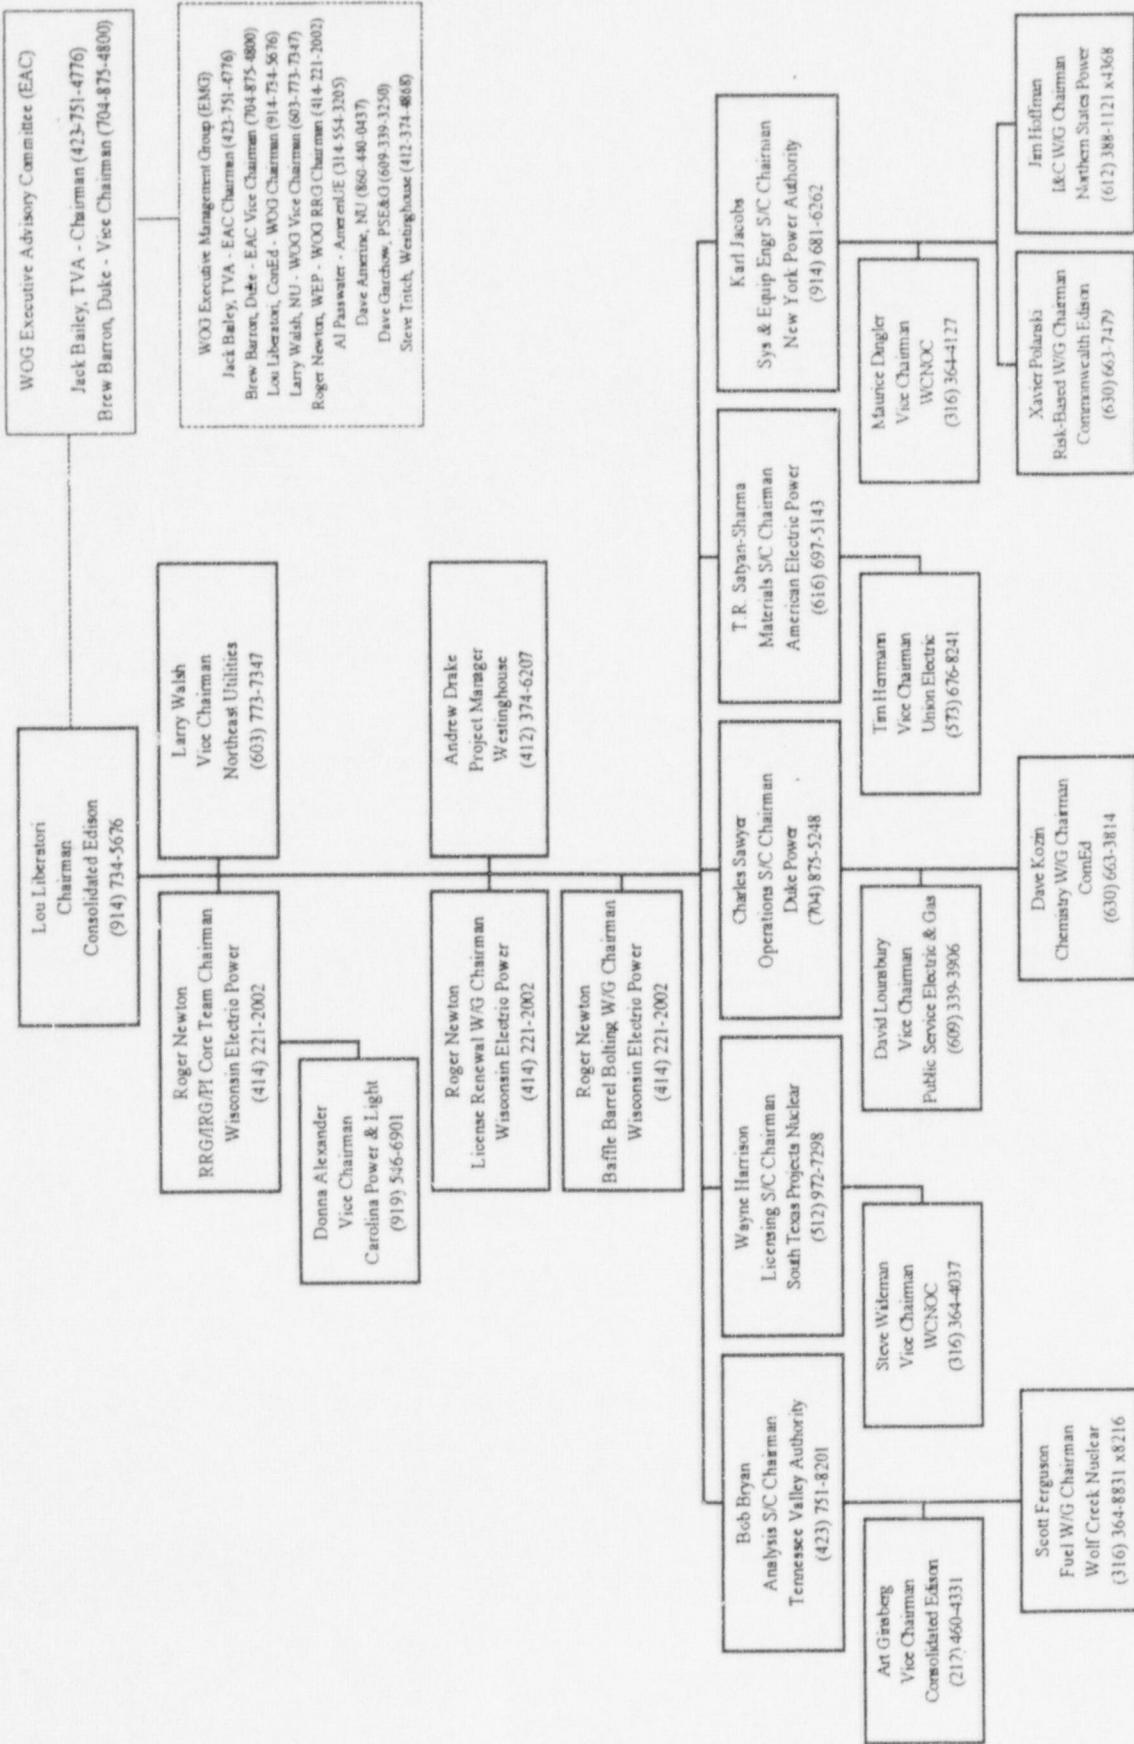

**WESTINGHOUSE OWNERS GROUPS
WOG / NRC SENIOR MANAGEMENT MEETING**

April 29, 1999

Westinghouse Owners Group Steering Committee - 1999

WESTINGHOUSE OWNERS GROUPS
WOG / NRC SENIOR MANAGEMENT MEETING
April 29, 1999

II. WOG PRESENTATIONS - continued

- Top Nozzle Spring Clamp Screw
 - In the Mid April outage at VC Summer - SCE&G experienced difficulty in gripping the top nozzle of a twice burned fuel assembly. Further examination indicated that most twice burned fuel assemblies exhibited gaps between the hold-down spring clamp and the top nozzle. Such gaps are indicative of failed top nozzle spring screws.
 - Chronology of WOG / W Activities
 - 4/15 - Problem experienced at VC Summer - immediate root cause investigation started. Fuel was moved to the SFP without incident.
 - 4/19 - WOG IRG telecon with W/SCE&G
 - 4/19 - W / NRC informational telecon
 - 4/20 - W notified fuel customers
 - 4/22 - All WOG members notified

**WESTINGHOUSE OWNERS GROUPS
WOG / NRC SENIOR MANAGEMENT MEETING**
April 29, 1999

II. WOG PRESENTATIONS - continued

- Top Nozzle Spring Clamp Screw
 - 4/23 - WOG PI Core Team Telecon
 - 4/24 - W / NRC Informational Telecon
 - 4/26 - WOG PI Core Team Telecon
 - 4/26 - W / NRC Update Telecon
 - 4/27 - W / NRC Update Telecon
 - 4/28 - WOG/W/NRC Update Telecon

**WESTINGHOUSE OWNERS GROUP
WOG / NRC SENIOR MANAGEMENT MEETING
April 29, 1999**

II. WOG PRESENTATIONS

- Redefinition of LB LOCA Licensing Basis
 - 9/98, Commissioner Diaz requested each OG to identify their highest priority regulatory issue
 - 11/98, WOG reply requested consideration of redefinition for LBLOCA
 - Present - evaluating current requirements to identify those with:
 - minimal impact on current safety envelope (risk informed)
 - significant operational / economic impact
 - potentially adverse safety impact
 - Future - discussion with NRC in October, 1999

**WESTINGHOUSE OWNERS GROUP
WOG / NRC INFORMATION MEETING**

April 29, 1999

II. WOG PRESENTATIONS-Continued

- Baffle Barrel Bolting (BBB) Program
 - BBB Program Objectives
 - Maintain safety for WOG plants
 - Proactively manage the program with a systematic approach
 - Integrate WOG program tasks with MRP/ITG program tasks
 - Results of Plant Inspections
 - Bolt degradation less than anticipated from European experience
 - March 25, 1999 meeting with NRC presented details of plant inspections

**WESTINGHOUSE OWNERS GROUP
WOG / NRC INFORMATION MEETING**
April 29, 1999

II. WOG PRESENTATIONS^{-Continued}

- Baffle Barrel Bolting (BBB) Program
 - WOG Plans for 1999
 - Acceptable BBB analyses for plant groupings to be completed
 - Evaluation of extending LBB to smaller lines for 4-loop downflow plants
 - Additional hot cell testing of Farley & Point Beach BBB
 - Hot cell examination of Ginna BBB under consideration
- Conclusion
 - It is appropriate to treat potential BBB degradation as an aging management issue, consistent with the on-going WOG program

WESTINGHOUSE OWNERS GROUPS

WOG / NRC SENIOR MANAGEMENT MEETING

April 29, 1999

II. WOG PRESENTATIONS - continued

- Risk Informed ATWS Model
 - Develop *Risk-Informed* ATWS model
 - Address NRC concerns with WCAP-11992
 - Demonstrate the approach in pilot application
 - 12/98 NRC/WOG Meeting
 - Information package provided before the meeting
 - Good Staff participation
 - Positive feedback on WOG approach
 - Staff identified additional item with respect to containment performance
 - Consequence assessment if RCS pressure exceeds 3200 psi
 - WOG questions value of performing detailed LERF assessment for events with very small changes in CDF ($< 10E-7$)
 - 3/99 WOG provided additional information in response to Staff questions
 - 4/99 -5/99 Evaluating the need to enhance certain areas of the program based on Staff feedback

**WESTINGHOUSE OWNERS GROUPS
WOG / NRC SENIOR MANAGEMENT MEETING
April 29, 1999**

II. WOG PRESENTATIONS - continued

- Containment Sump Issues
 - Application of GDC-4 and LBB to debris generation
 - Supported by all PWR OGs by letters to NRC
 - NRC held a public meeting on 12/15/98
 - NRC did not endorse OGs' interpretation
 - NRC stated that they will consider LBB in risk assessment of issue

WESTINGHOUSE OWNERS GROUPS

WOG / NRC SENIOR MANAGEMENT MEETING

April 29, 1999

II. WOG PRESENTATIONS - continued

- Containment Sump Issues
 - WOG actively participating with NRC
 - Participating in NRC research program public meetings
 - WOG providing technical expertise for Phenomena Importance and Ranking Table (PIRT) panels for both NRC research programs
 - Coatings failure phenomena - Savannah River Technical Center
 - Debris transport and risk assessment - Los Alamos National Lab
 - Offer made to review and comment on risk assessment of sump performance prepared as part of NRC's research program
 - Supporting NRC Research with WOG members
 - Letter issued requesting members respond to NRC sump information survey issued through NEI
 - Letter being prepared asking members consider NRC's request for Reference Plant volunteers

**WESTINGHOUSE OWNERS GROUPS
WOG / NRC SENIOR MANAGEMENT MEETING
April 29, 1999**

II. WOG PRESENTATIONS - continued

- Revised Core Damage Assessment Guidance (CDAG)
 - Update / revise CDAG to the current Severe Accident Knowledge, Accident Progression, Indications, and Fission Product Behavior
 - Relies on fixed in-plant instrumentation
 - Supports the relaxation of PASS requirements

WESTINGHOUSE OWNERS GROUPS WOG / NRC SENIOR MANAGEMENT MEETING

April 29, 1999

II. WOG PRESENTATIONS - continued

- Relaxation of Post Accident Sampling System Requirements
 - Remove selected PASS requirements for timing and accuracy
 - Maintain PASS requirements
 - Containment atmosphere sample
 - Containment sump sample
 - RCS liquid sample
 - Revised CDAG & Relaxation of PASS Requirements
 - Under active review by NRC Staff
 - 4/30/99 ACRS Severe Accident Management Subcommittee meeting
 - 5/6/99 ACRS Committee meeting

WESTINGHOUSE OWNERS GROUP WOG / NRC SENIOR MANAGEMENT MEETING

April 29, 1999

II. WOG PRESENTATIONS - continued

- Risk Informed Technical Specifications
 - WOG supporting industry and NRC Risk Informed Tech Spec Initiative
 - Current WOG Risk Informed Tech Spec programs
 - Relaxation of Accumulator AOTs (SER issued)
 - Risk-Informed Tech Spec AOT Improvements
 - RT / ESF AOT / STI Relaxations
 - ECCS, RWST, Cont. Isolation Valves, Cont. Spray & Fan Coolers, MSSVs, ADVs, CCW, SW, and AC/DC systems

**WESTINGHOUSE OWNERS GROUP
WOG / NRC INFORMATION MEETING
April 29, 1999**

II. WOG PRESENTATIONS^{-Continued}

- MOV Program
 - Background
 - JOG effort with three other Owners Groups
 - MPR contracted to assist with JOG MOV Program development
 - Objective
 - Develop industry response to GL 96-05
 - Program Status
 - SER issued on Program Document
 - Third NRC Status Meeting held with NRR on April 14, 1999
 - Test program continuing
