MEMORANDUM FOR:

Vince Noonan, Chief, EQB, DE, NRR

FROM:

James E. Gagliardo, Director, TTC, IE

SUBJECT:

ADDITIONAL EFFORT AND INPUT NEEDED FROM THE I&H PANEL

The following additional effort is needed by the Intimidation Panel:

- o Complete the review of the two allegations referred to the Panel by the Board, and include the result of the review in the supplemental report. These allegations were made by Mr. Mouser earlier this year.
- o Complete the report (part of supplemental report) on the review of the Omsbudsman Program at Comanche Peak.
- o Complete the review of the reports of the special RIV task force and OI regarding their review of the SAFETEAM effort at Comanche Peak.
- o Complete the review of OI Investigation Reports 4-84-039 and 4-84-050, and report the results of the review in the supplemental report.
- o If the Hearing Board continues its review of the Lipinsky incident, the Panel should complete the review of this effort and report its evaluation in the supplemental report.

If you have any questions on this effort, I would be happy to discuss it.

SUBJECT:

RECORD REVIEW GROUP FINDINGS

Over the past few months a contractor team has been reviewing Comanche Peak hearing transcripts, depositions, and alleger meeting transcripts for the purpose of insuring that no allegations have been missed by the TRT review. Attached is a list of 27 items which the group has identified as allegations which were potentially not followed up by the TRT. I am fairly confident that these can be tied to existing allegations or summary dispositions.

Please review these items, interface with Luke Jones (37991, NL, or Delray Bldg.) and Chet Poslusny (27066) to determine if in fact, any action items have been missed. Please provide feedback to me by May 1.

HARRY STADERS
Enclosure

TRITGROVE LEADERS Section 3.3 of the Indimidation Panel's SSED (attached) gives the TAT Findings in the Areas where we found that indimidation had occurred. This is based on ona Liscussions on March 21. pole are your input. Thanks OS. Jerg to minimite (1-18)

Roy Color of Control of the FOIA-85-799

BI 34

The intimidation panel concludes that the facts presented in this investigation report do not support a finding that other workers were intimidated by the firing of Mr. Atchison.

e. OI Investigation Report 4-84-006

- f. DI Investigation Report 4-83-001 documented the DI investigation of the alleged intimidation of Mr. William Dunham's supervisor (Harry Williams) who had threatened to pull the certification and in effect terminate QC painting inspectors who continued to "nit pick." The investigation report added nothing to the other information that was made available to the study team regarding this event. The study team and the intimidation panel have concluded that this event did constitute an act of intimidation and the above investigation report supports that conclusion.
- 3.3 TRT Findings In Those Areas Where Intimidation Occurred

On March 21, 1985 the intimidation panel met with the team leaders and other selected members of the TRT to determine if technical concerns had been found in those areas in which the panel had found intimidation events to have occurred. The following is the list of identified events of intimidation as reported in Attachment 3 followed by the TRT findings for each of the areas in which the intimidation occurred:

1-1

- (1) D. Stiner Weave Welding on Pipe Supports.
 This area was examined by both Region IV and the TRT. Neither group could substantiate the technical allegations made by Ms. Stiner.
- Californ t. -
- (2) D. Stiner Circuit Breaker Article There is no technical area associated with this intimidating event.
- (3) W. Dunham Intimidation of Coatings Inspectors
 The TRT Coatings Group found that the inspection
 procedures in this area were inadequate and that the
 QC inspectors had missed the big picture and were
 not finding the pinholes in the coatings.
 They did find a higher than normal percentage of
 faulty coatings, but could not conclude that it could
 be attributed to the inspectors having been intimidated.
- (4) W. Dunham Termination
 The higher than normal percentage of faulty coatings at CPSES may be linked to this intimidating event, but there is insufficient information to indicate that this was a major or contributing cause.
- (5) S. Neumeyer Liner Plate Traveller Incident
 The QA/QC Team of the TRT did find a concern in
 the documentation of this area (see writeup on
 AQ-55 and AQ-78 in SSER-11), but the Eivil/
 Structural Group found no significant problem in
 liner plate welds (see AC ___ in SSER-8).

- (6) C. Allen ALARA and DCA Reviews
 This issue was addressed in AQC-36 of SSER-9. The
 Coatings Team of the TRT found approximately eight
 discrepancies were significant. The generic implications of the allegation are being reviewed as part
 of the applicant's corrective action plan for TRT
 findings.
- (7) C. Allen Detergent on Coated Surface The TRT Coatings Team reviewed this issue and determined that the detergent on the coatings was not a detriment to the coatings.
- (8) C. Allen Cigarette Filter Incident

 This issue was reviewed by the TRT Coatings Team
 (see AQO-17 in SSEP-9) and they concluded that
 small amounts of water and bil in the paint would
 have had no impact on its adherence properties.

 Large quantities of water and bil-would have been
 obvious to a trained QC inspector.
- (9) Y-Shirt Incident

 The T-Shirt incident was addressed by the DA/QC

 Team (see AQ-46 in SSER-11) and the Electrical Team

 (see Electrical Category No. 5 in SSER-7). Neither team could find any indication that the incident had a negative impact on their areas.

(10) S. Neumeyer - Stanford Incident

The TRT found no problem with the documentation of the welds in question in this allegation, but there was a question as to whether or not the non-destructive testing of the welds had been performed.

Cat 15 A GW-72

4. Management Implications

4.1 Climate of Intimidation

In Attachments 1 and 3, the study team concluded that there was no climate of intimidation at CPSES. Based on the definition of "Climate of Intimidation" used by the study team, the intimidation panel agrees with that conclusion.

The panel agrees that the small number of intimidation events at a large site like CPSES suggests that intimidation was not pervasive. The intimidation panel is concerned, however, that the management style at CPSES (to be addressed in Section 4.2) establishes a work environment in which the right chemistry exists for intimidation (actual or perceived) to occur given the right set of circumstances. This is an area that needs immediate attention and is addressed in Section 5.

4.2 Management Style

In Attachments 1 and 3, the study team addressed the management style and interface problems (See Sections 3.3 and 3.4 respectively) as indicated by the depositional data and the survey data. The intimidation panel is also concerned about the apparent autocratic/bureaucratic style in the behavior of CPSES management.

that the TRT personnel observed an atmosphere characterized by the employees' fear of management at CPSES. Since CPSES is a non-union project there is apparently no internal grievance system, so that each employee holds his or her position at the whim of management. If there is such a system, there is no indication from the record that it was effectively used.

In sum, it is the panel's view that the atmosphere created by the management style at the CPSES facility does not necessarily lead to improper construction or quality control. We assume that many projects have been built with an unquestioning autocratic management style. However, it is the view of the panel that an important ingredient for an effective QA program to monitor the quality of construction is an atmosphere where employees may freely raise safety related concerns to an interested management. While it is clear that employees did raise concerns, even those making allegations of intimiation, there was a perception, whether valid or not, that some management individuals did not truly want to hear concerns nor did they always provide adequate explanations to questioning employees. This is not to say that every employee has valid concerns. The utility hires, trains, and directs the activities of the employee, but if it is going to keep the employee in a responsible position, it must be satisfied that the employee understands his or her job. It cannot keep the employee in a responsible position and not provide adequate explanations regarding his/her concerns. Failure to do so invites an employee attitude of not caring which will result in the employee not carrying but the expected job. The panel cannot conclude, however, that the company's management style contributed in any way to the quality assurance issues at Comanche Peak. Poor procedures, training. management direction could also have caused or contributed to the quality assurance issues.

Comanche Peak SSER 13

5. Action Recommended

of the study team and the intimidation panel suggest a need for action by TUEC remajorment. The panel recommends that action should be taken to assure that the management style of the TUEC organization is conducive to assuring a quality project. There is no one course of action such as the replacement of one or more managers, or a reorganization, or changing procedures to develop an internal grievance procedure that is recommended for changing the attitudes and perceptions of the past. Licensee's management should take an objective look at the past incidents described in this SSER as well as the current situation at the site and take steps as necessary to assure a quality first attitude by its management and employees. The use of outside independent consultants may be appropriate and should be considered. The overall efforts should be directed at establishing trust between the employees and management to eliminate any fear of reprisals for anyone who identifies safety concerns or questions safety procedures.

In making these recommendations it is important to reiterate that the panel is not saying there is a pervasive climate of fear or that the licensee's management style in fact contributed to quality issues. But given the examples described in the record and perceptions of some TRT members the panel believes that a concerned management would take aggressive and dynamic action to avoid and erase any question of a potential problem of intimidation or harassment:
