TO: M. R. Wisenburg	CORRESPONDENCE SERIAL NUMBER ST-HL-HL-35794
FROM: M. E. Powell <i>MEP</i>	SUBJECT FILE NUMBERS
DATE OF CALL: July 2, 1986	PRIMARY: G25      SECONDARY:
SUBJECT: SER Confirmatory Item #9 - Momentary Fuel Assembly Liftoff	
TELECON PARTICIPANTS: (INCLUDE NAME AND ORGANIZATION OF EACH)	PAGE 1 OF 2
Shih-Lieng Wu (USNRC) P. Kadambi (USN C) M. E. Powell (HL&P)	
<p>Shih-Lieng Wu (USNRC) contacted me regarding HL&amp;P's letter of May 23, 1986 (reference ST-HL-AE-1668) which provided supplemental information concerning momentary fuel assembly liftoff. This item is an SER confirmatory item.</p> <p>Specifically, Mr. Wu stated that he needs a paragraph or two which provides, for example, the fuel assembly weight, the value of the hold down spring force, the amount of expected deflection and the results of the analysis (i.e. how big is the liftoff force). In addition, a statement should be made that based on the values above, that the analysis shows that there is sufficient margin that the liftoff force will not uplift the fuel assembly.</p> <p>Mr. Wu emphasized that he was not requesting detailed tables with the requested information and the he only wanted this information written in a paragraph or two. He stated that Westinghouse (W) has provided something similar on other subjects.</p> <p>Subsequent to the conversation with Mr. Wu, I contacted Bruce Lorenz (W) and briefed him on the conversation with the NRC. Bruce will coordinate within W getting the requested information. He will contact me on July 7, 1986 with a schedule for responding.</p>
