RE: 10 CFR Part 19 et al

the lesson of Chernobyl needs to be
learned here. Public safety now and
future safety requires that low-level
radiation should be less than 10 - in
fact, we humans should be doing
nothing to add to present level of radiation.

Our continued use and development of the
nuclear industry is extremely short sighted, not only from the
standpoint of production which is not safe
but, most especially in our inability to
store the wastes.

Sincerely,
Norma Cote8607250113 860724
