I find it hard to believe that the Nuclear Regulatory Commission is even considering an evacuation plan that would provide for the escape of almost no one near Seabrook in the wake of a disaster. The idea of a one mile area is so ridiculous that it can be compared only to the suggestion that one survive a nuclear war by digging a hole, crawling in, then placing a door on top and covering it with earth. But the ludicrousness of the suggestion has not prevented you from taking it seriously - so seriously that the plan is to take the

power of protest and prevention from us
by allowing such nuclear power plants
to be licensed without a state approved
nuclear evacuation plan.

This suggestion has eroded any remaining
faith many of us may have had in the
ability of the NRC to perform its functions
effectively on any level. If a one mile
evacuation area can be taken seriously, what
must be the level of other standards of
safety for nuclear reactors?

I strongly oppose your plan to take
away states rights, and am forwarding
a copy of this letter to my senators and
Congressmen.

Very Truly yours,

Elizabeth E. Hathaway

The Nuclear Regulatory Commission
Attn.: Docketing and Service Branch
Washington, D.C. 20555

Sirs:

I want to register my strongest objection to the proposed NRC rule change which would allow licensing of nuclear power plants prior to or in the absence of fully approved evacuation plans submitted by individual states. One must assume that the rule as it currently stands was made for a good reason: to insure local cooperation in the development of evacuation plans that would adequately protect the health and safety of the local populations in areas that could be endangered by accidents at such plants. Clearly, local government is certain to have a very firm grasp on problems that may very easily be overlooked by the nuclear utility applicants; state government's participation safeguards both local control and the health and safety of the state's population at large and is absolutely essential. The Nuclear Regulatory Commission was wise to stipulate state approval of evacuation plans prior to licensing of new plants in the past; it would however be foolhearty to now try to circumvent state approval in the hope of expediting the opening of new plants when so many lives are at stake.

As a resident of Governor Dummer Academy, the oldest boys' boarding school in the U.S., I have had the opportunity of reading a draft of the evacuation plans submitted for the school by authorities at New Hampshire Yankee in Seabrook and have been appalled by the inaccuracies in the data on this school and by the incredible assumptions that this plan makes: that a school population of ca. 400 can be evacuated by means of the six available school vans (seating a total of 48) and buses which are to be diverted to the school from Boston -- precisely when the same plan stipulates that all evacuation route leading away from Seabrook (and south to Boston) will be one-way; that inaccurate directions to the wrong address of our sister school, the Pingree School in South Hamilton, will enable said bus drivers to deliver students and faculty along winding country roads under crisis conditions to a school which has been designated to temporarily house Governor Dummer students in its dormitories when it has no dormitories; etc. ad absurdum. New Hampshire Yankee has demonstrated its inability to do its homework in the past, and the haste with which it has

J. Lane, 266 Phil

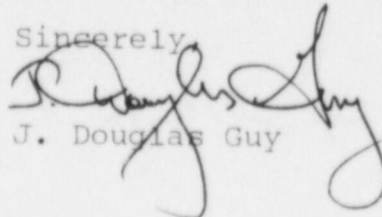

MAY 0 1987

Acknowledged by card.....

submitted "new" evacuation plans to the NRC makes one extremely wary. The fact that evacuation plans proposed by the Seabrook New Hampshire Yankee administration have not been approved by communities within the stipulated ten mile evacuation zone (which, by the way, is pretty stingy in and of itself) has one good explanation: the plans are not viable, nor even remotely realistic, and Seabrook's continuing efforts to gain licensing by any and all means is yet another demonstration of bad faith.

The faculty of Governor Dummer Academy is overwhelmingly opposed to the licensing of the Seabrook plant without approved evacuation plans in place. In door-to-door polling of the parish of Byfield roughly 85-90% of the citizens of this town were of exactly the same opinion and were willing to reconfirm that opinion with their signature of petitions on this topic which have since been delivered to the NRC. Since in my mind there is currently no plan available that will guarantee the safe evacuation of my family, friends, and fellow citizens, nor will there ever be, I wish to voice my opposition to this potential rule change. Along with this, I wish to express my fervent hope that the Nuclear Regulatory Commission finally pause long enough to consider its primary responsibility -- to regulate the nuclear industry so as to protect the public's health and safety, not merely rubber-stamp its every wish and whim -- and thus to assure the American citizenry that you will never accept the concept of "acceptable losses" from a nuclear power accident, not now or ever in the future. You were created to protect the public from the dangers of nuclear power, and entrusted with the regulatory power to do so; one can only hope that you will exercise that power wisely.

Sincerely,

J. Douglas Guy

Dear Sir:

I am opposed to your proposed rule change which would allow public utilities to submit evacuation plans for communities within the EPZ's of nuclear power plants, when state and local governments refuse to participate in such planning. This proposed rule contradicts President Reagan's position that "this administration does not favor the imposition of federal authority over the objections of state and local governments in matters regarding the adequacy of an emergency evacuation plan for a nuclear power plant." Has the President forgotten this position or does the present NRC board repudiate the Presidents' views? The Federal Emergency Management Agency, FEMA, states clearly that any plans developed without state participation cannot meet their safety standards. Would the commission dismantle FEMA as well? Since Chernobyl, three countries have abandoned nuclear power altogether: Austria, Sweden, and the Philippines, with Greece canceling its first reactor. According to Worldwatch Institute polls, 78% of all Americans oppose any further nuclear power plants. The NRC prefers to dig in its heels and license nuclear power plants at any cost to public health and safety. Perhaps it is time for the resignations of chairman Lando Zech and Mr. Victor Stello for starters. The people will turn to Congress to have their voice heard. I believe we still have a democratic form of government in this country.

Yours truly,

Jay E. Blake

OFFICE OF THE
DOCKETING & RECORDS
BRANCH

Dear Mr. President,

May I please have a few minutes of your time?

I would like to bring to you attention a concern of mine, Nuclear Power Plants and the N.R.C. I am very concerned about the attitude that the N.R.C. has taken. They can't be acting with all the facts and with the peoples' health and safety in consideration. I can't believe they are considering going against their own Rules and Regulations that they set up for nuclear power plants by dropping the "10 Mile Evacuation Radius" for Seabrook, N.H. to one mile. This inconceivable decision has made me take a long look at the N.R.C. and look at other nuclear power plants.

I can't understand why we are allowing nuclear power plants to "go on line" without a National Plan for Nuclear Waste. There are more laws and regulations for other waste products yet, nuclear waste is by far the most dangerous. I don't feel there is a safe way to handle this waste or a safe place to store or bury it. It has been said, "By the year 2000, there will be enough nuclear waste to make a road from Boston to California." What is going to be done with it?

We are told that we need more sources of electricity. Yet, New Hampshire is making some of there small electricity produces stop producing. There is a cable running from Canada through our area to receive hydropower but even this is being disregarded. There seems to be a stop to all alternatives to electricity.

There are other problems with nuclear power plants besides the problem of the waste, that are being ignored. There are higher than normal cancers and cancer related illnesses, deaths and birth defects in areas around operating nuclear power plants, Higher than the national averagers. There are radiation leakage, dangerous emmissions, coming from nuclear powerplants while they are running, "constant puffs". I have also heard reports about plankton being killed in the waters near the Plymouth, Mass. Plant.

We are told that "Seabrook" is so safe that there will never be any problems. This is why the N.R.C. can cut the "10 Mile Radius" down to one mile. Who do they think they are kidding other than themselves? No construction is perfect, no machinery or human is perfect. The N.R.C. is saying nothing will happen instead of thinking and planning for "what if". After all the Space Shuttle

DS10

ADD: P. Crane, H-1035

J Lane, 266 PHIL

wasn't expected to blow up, but it did. The Three Mile Island Plant wasn't expected to have a "melt down", it did. The Titanic couldn't sink but it did.

Three Mile Island showed what could happen. Chernobyl is even fresher in our minds. The Three Mile Island has also shown that a "10 Mile Radius" was not enough. There is a 600% high than normal rate of cancers, cancer related problems and birth defects ever outside of the "10 mile evacuation radius" in the direction the radiation "plume" went in. Yet, the N.R.C. ignores all of this information or blames it on other things. These seem to be forbidden subjects. If all these "red flags" were appearing in an area where there wasn't a nuclear power plant, there would have been OPEN, intensive investigations long ago.

It is time to "take off the blinders", "stop hiding behind the computers" and letting the N.R.C. and the Nuclear Industry tell us how safe nuclear power plants are and what can't happen. It is time to appoint a panel to investigate the safety of nuclear power, health hazards of nuclear power plants and disposal of nuclear waste, a non-bias panel. Also, investigate the N.R.C. It seems they are acting for the Nuclear Industry not acting for "the people", to keep them safe.

One other thing pertaining to Seabrook, N.H., anyone that knows the Seabrook area knows there is no way to safely and quickly evacuate people from that area, even one mile, especially in the summer. It is a summer resort area with narrow roads in and out. The power plant is surrounded by roads, homes and businesses. The Plant doesn't sit on the ocean but sits behind route 1-A, homes, businesses and beaches. Come see yourself. I have inclosed a copy of a map.

Please don't let the N.R.C. take any further action to change their own rules and regulations or start up anymore plants until everything is fully investigated. There is so much at stake, peoples' lives now and future generations and the land, air and water.

The warnings are all there. PLEASE ACT NOW, NOT AFTER A CATASTROPHE.

Thank you for your time.

Sincerely,

Barbara Hoke

Barbara Hoke
Rowley, Mass.

(outside Seabrook's "10 Mile Radius")

NEW ENGLAND

Scientist: Emissions may have caused high cancer rates

BOSTON (AP) — A scientist says radioactive releases from the Pilgrim nuclear power plant during the mid-1970s may have lingered in swirling coastal air, causing the high leukemia rates and birth defects documented in five towns near the Plymouth reactor.

A scientific link has not been established between the plant and the high cancer rates, but that possibility should receive serious attention, Dr. Sidney Cobb, an epidemiologist and professor emeritus at Brown University, told a legislative committee yesterday.

Most of the increases in leukemia cases in Plymouth, Duxbury, Scituate, Kingston and Marshfield were seen about five years after a 12-month period from late 1974 through most of 1975 when radioactive emissions from the plant exceeded federal standards "on more than one occasion," Cobb said. The emissions, however, were still under the government's maximum safety level.

He said it would take about five years for residents to suffer leukemia after being exposed to the radioactivity.

Cobb also said infant deaths and congenital birth defects rose in the year following the higher emissions, supporting the theory that radioactivity from the plant caused the health problems.

While saying more detailed studies need to be done, Cobb said there does not appear to be any occupational cause for the health problems in the south shore communities. He also said there is no common water or milk supply that could be the culprit.

Cobb also outlined a theory he said could explain how relatively low levels of radioactive releases could cause leukemia and other health problems.

The scientist said a coastal wind pattern could keep the radiation circulating in the same area, slowly building up over time instead of dissipating.

Cobb also noted that the land rises sharply two to four miles inland, creating a "geographic containing wall" that could confine radiation. And he suggested that coastal fog might be trapping radioactive particles.

An analysis of the leukemia cases by Cobb shows that "essentially all" of the excess cases are clustered within a four-mile wide strip of the coast, extending 20 miles along the shore. He called it a "very narrow, very unusual geographic distribution for leukemia."

Cobb said there is a similar leukemia-rate increase in the coastal area near the Maine Yankee plant in Wiscasset, Maine.

NEW ENGLAND

Higher cancer rates found in towns near Pilgrim plant

By ERNEST J. CORRIGAN
Ottaway News Service

BOSTON — A new study by the state Department of Public Health has found a significantly higher rate of leukemia in males living in a five-town area around the Pilgrim nuclear power plant in Plymouth.

Cancer rates among females living in the study area of Plymouth, Kingston, Marshfield, Scituate and Duxbury were also higher than expected, but state officials say those increases are not "statistically significant."

But the findings do not lay the blame for elevated cancer rates at the nuclear facility's doorstep. A state epidemiologist who reviewed the findings yesterday said the leukemia could be the result of radiation, benzene or even pesticides.

"We weren't able to determine what is causing it," said Robert Knorr, chief of the state epidemiology unit. "We can't say what is causing the excess, only that the excess is there."

In the five towns combined, Knorr said that between 1982 and

“

We weren't able to determine what is causing it. We can't say what is causing the excess, only that the excess is there.

”

— Robert Knorr,
chief epidemiologist

1984 the state found 31 cancers were reported in males. Given the age and size of the population, Knorr said the state expected just 18 cases.

In females for the same years, the state recorded 21 cancers against an expected rate of 15

cancers. While that number is higher than the expectation, Knorr said it is not "significant" enough to cause alarm.

In all categories of cancers analyzed by state health officials, males were found to have higher rates in the five towns than were anticipated.

Knorr said it is impossible to assess the cause of the cancer without a clearly defined health study of area residents. He said the department would have to do extensive interviews of 300 carefully selected residents within the area to determine key facts such as length of residency; possible exposure to chemicals at the workplace and other occupation hazards; and possible exposure to drugs that may have similar effects.

That study has not been authorized by the Legislature nor sought by the department as of yet.

Department spokesman John Stobierski said it is not for the department to say what the response to the data will be. "We're gathering data and say what we can draw from that as a result of the evidence. After that isn't our call to make."

OPINION

LETTERS

Please don't pigeonhole the protester

To the editor:

This letter is in response to a letter from Aldene Gordon, Rowley, published in the March 18 Daily News.

Where did you get this stereotype anti-Seabrook protester image, Aldene? We "anti-Seabrook protesters" do not need "another outlet" to direct our "energies," because most of us are directing our energies in many productive, socially worthwhile causes, thank you very much.

Perhaps you better look around again and notice who we are — we that feel that Seabrook is a threat to our existence and the future of our children. We don't spend our days working against Seabrook from 9-5. We volunteer in our schools, in hospitals, on town committees, in hospices, and in many important organizations that exist for the betterment of society. We have jobs, children, and sometimes elderly parents to care for. Some of us do volunteer work to aid the homeless, as you suggested. Some of us work with the handicapped or troubled teenagers.

As far as "the weak and sick souls" that are "de-institutionalized" and the "glamorizing perversion" from TV, and drunk drivers, please feel free to direct your energies as a citizen and selectman to writing letters to the appropriate authorities to tackle these problems. Spending your time writing to New Hampshire officials to apologize for Steve Comley's past actions is not exactly what I call directing your energies in the most socially worthwhile manner. Contact those State Department of Mental Health

officials if you're so worried about the "weak and sick souls."

You spend a lot of time fretting about that loss of electricity that you seem to think will suddenly happen overnight when Seabrook shuts down for good. Well, I happen to think the threat of a nuclear disaster is far more worrisome than doing without my hair dryer.

We "anti-nuke" protesters are not stupid — we know that the need for energy is a demanding one. But we also know that it only takes one minor disaster at Seabrook to kill our residents or give them cancer or destroy our environment.

If the great nuclear minds would turn to research and development of those resources, we'd be rid of the threat of nuclear disaster and would have enough energy for even you to relax.

I admire your determination and spirit with which you tackle your concerns, Aldene. But sit down one night and really think — what if we did have an accident at Seabrook?

And one more thing — take a gander about at all those kooky crazy anti-Seabrook protesters, Aldene. They're your friends, your neighbors, your fellow town officials — they are hard-working people who serve society in many paid and unpaid positions, directing their energies in many caring outlets. They're trying to stop Seabrook to save their lives, their families' lives, and yours, too!

32,000 signatures collected on anti-nuclear petition

AMESBURY — The anti-nuclear petition drive launched throughout the region two weeks ago has gathered twice as many signatures as expected, says the head of the group sponsoring the drive.

Thomas Moughan, director of the Amesbury-based group Citizens Within the 10-Mile Radius, said 32,000 residents of the 37 communities along the coast between Gloucester and Portsmouth, N.H., had signed the petition.

He said he and at least 30 other participants in the petition drive will hand-deliver copies of the petition to federal regulators, the White House and Congressional leaders in Washington, D.C., on April 2.

The petition, directed at the Nu-

clear Regulatory Commission, opposes relaxing emergency evacuation planning requirements for the Seabrook nuclear power plant. The petition also calls for an investigation into the safety of the plant.

"We had hoped to gather 15,000 names," said Moughan. "But the interest in the petition expanded beyond the original 10-mile radius. The response was overwhelming."

He said 1,000 of the signatures were on flyers left on doorsteps, filled out by residents and mailed to Citizens Within the 10-Mile Radius.

The group gathered 4,500 signatures each in Amesbury and Newburyport, 3,500 on Cape Ann, 1,800 in Ipswich, 1,000 each in Salisbury

and West Newbury, 1,600 in Newbury and 600 in Merrimack, said Moughan.

He said in Exeter, N.H., where police twice broke up petition efforts, 2,500 signatures were gathered.

"Now, we're setting to the job of recopying and collating 1,800 sheets with signatures," said Moughan. "We wanted to make 25 complete sets. But that would require 84 reams of copy paper."

Moughan said copies of the petition will be delivered to members of the NRC, New England congressional delegates, President Ronald Reagan, Gov. Michael Dukakis of Massachusetts, Gov. John Sununu of New Hampshire and all declared presidential candidates.

Group to review health data concerning Three Mile Island

NEWBURYPORT — Health data from Pennsylvania's Three Mile Island area is the primary topic to be discussed during a regular meeting of Citizens Within the Ten Mile Radius this evening.

Chris Nord of Merrimack will present the results of a research project conducted by residents of the Three Mile Island area which he said plots high incidences of cancer, leukemias and other negative health effects along the pathways of radioactive plumes released during the 1979 accident.

The meeting, which is open to the public, will be held at St. Paul's Church, High and Market streets, at 7:30 p.m.

Also on the agenda is a report from the 10-mile citizens group coordinator Thomas Moughan and Norma Beit about their attendance last month at a Nuclear Regulatory Commission hearing on a draft proposal to limit state and local participation in evacuation planning. The NRC voted after the hearing to accept the proposal for consideration.

A report will also be given on the results of the petition drive, conducted by the group in late February, concerning Seabrook Station's bid to reduce the emergency planning zone from 10 miles to one. The petition drive, which lasted one week, gathered thousands of signatures from Cape Ann to Portsmouth, N.H.

Group members will discuss plans to deliver the petitions in person to Washington, to members of Congress as well as the NRC.

OPINION

There won't be a home to go home to

To the editor:

In 1945, prior to the bombing of Japan, the U.S. detonated atomic Bombs on the Island of Bikini. The inhabitants were "temporarily" relocated in order to accommodate the test bombings. Now, forty years later, those displaced citizens are still unable to go home; the island is still rendered uninhabitable.

In April, 1986, the nuclear accident at Chernobyl was reported to be five times as powerful as were the bombs dropped on Hiroshima and Nagasaki.

A Swedish exchange student residing with us for the current school year bears the effects of his country's proximity to Chernobyl (nearly one thousand miles away) by having a body count measurably higher in radioactivity. Further, there is news from his uncle, a sportsman, who shot some game and then had to bury the kill because of its contamination. Moreover, there is word from his cousin in the north of Sweden about the mass destruction of entire reindeer herds across all of Scandinavia threatening an end to a way of life for a segment of the population.

We teach our children that we learn from our mistakes while we live with the bromide that "history repeats itself." Perhaps there is more truth to Arnold Toynbee's spiral theory than meets the eye. Only just maybe each recurring mistake may be ultimately worse than the one which precedes it — like the threads on a screw — spiraling in an ever narrowing circuitous route downward. Why else would we permit a situation like Seabrook to continue? We have been led to believe "it can't happen here." We are "too advanced in our technology" and we are reminded that "Seabrook Station is fool-proof." Despite documented substance abuse by construction workers, despite the long delays and exposure of the carbon steel parts to weather and corrosive salt and despite the demonstrated malfunctioning of valves, we have been assured that there is virtually no possible danger of an accident. (So safe, in fact, that those businesses in the immediate area cannot get insurance coverage.) Nevertheless, the powers that be have promised an absolute when logic tells us there can be NO absolute. The construction, the operation and the ongoing maintenance of Seabrook Station is subject to human error. Accidents are, by their very nature, unpredictable; can we be so smug to assume Americans don't make mistakes! To have allowed the construction of Seabrook Station on a corrosive, unstable, salt marsh, with its fragile eco-system, is unconscionable. To grant a license to operate such a plant is negligent and grossly irresponsible. And, as if the aforementioned were not enough, the public is being subjected to endless, infuriating media attempts, by the Coalition for Reliable Energy, to cram a white elephant down our collective throats and stifle the public outcries. By the wisdom of the powers that be, they can cut the states out of the decision making with regard to nuclear power plants and decrease the emergency evacuation zone to ground zero. Disregard the potential threat of a nuclear accident because, in the event of a real disaster, we may find our homes and cities from Portland to Boston and beyond uninhabitable for years, our lifetime perhaps. We won't need your electricity then. Further, barring any untoward circumstance, twenty years from now when Seabrook has become obsolete, it will simply be sealed up — like a nuclear time capsule — to sit silenced atop the salt marshes. Eventually the legacy to our progeny will be their very own Love Canal.

Is this twentieth century Da-Mock-Racy where money talks and the voice of the people be damned?

C. D. GETCHELL
Newburyport

Appreciates the support from petition signers

To the editor:

I would like to thank the Citizens Within the 10-Mile Radius for their concern and love for mankind: I've done some work for C-10 last week; while I did get some 400 signatures against changing the evacuation to one mile, the thing which sticks most in my mind were the people whom I met. "They are afraid;" "They are worried."

Out of 400 people only 11 wouldn't sign.

I want to thank all those people who gave me support and signed. I can't thank them enough! And most of them couldn't thank me enough (their words).

We can win!

CHARLES M.A. CHASE JR.

Re: Public Comment on Proposed NRC rule change regarding State Authority in Evacuation Planning.

Docket Number: FR-Doc 87-4756

Commissioners:

I strongly object to the NRC proposed rule change that attempts to undermine State and Governor's authority in the emergency planning process for nuclear reactors. In addition, I submit for public comment the signatures of 250 area residents who also oppose the proposed rule change.

It is well within the role of a state Governor to have jurisdiction over matters such as emergency planning that will directly affect the health and safety of the residents of his or her state. State authority is critical to this issue, as it allows the citizens the opportunity to hold their Governor accountable for his actions, thereby insuring that not only are the issues of safety resolved, but by also protecting the democratic process, a process often overlooked by the NRC and Utilities.

Note that the 250 residents who voice their objections to the rule change also voice their objections to any reduction in the current 10-mile emergency planning zone. In addition, those residents call upon the NRC to initiate an Independent Investigation of the Seabrook Reactor.

NRC critique said leaked to plant owner

Washington Post

WASHINGTON — Nuclear Regulatory Commission documents, alleging serious safety defects at a Louisiana nuclear-power plant were leaked to the plant's owner, apparently from the office of an NRC commissioner who later tried to destroy evidence of the security breach, the agency's chief inspector has told Congress.

Ben B. Hayes, head of the NRC Office of Investigations, told the Senate Governmental Affairs Committee Thursday that the documents, dated June 8, 1983, gave the Louisiana Power & Light Co. a "tremendous advantage" in a subsequent safety investigation at its Waterford nuclear plant near New Orleans.

He and other witnesses said the leak to LP&L appeared to be part of a pattern of NRC coziness with the nuclear-power industry, to the point of squelching potentially embarrassing investigations and compromising safety.

The document leak was not discovered until 1985 and was never fully investigated, Hayes said. He testified that he was ordered to turn over his notes and all copies of the documents to NRC Commissioner Thomas M. Roberts, who told the senators he destroyed them.

The documents outlined information gathered by a reporter about cracks in the concrete floor of Waterford's containment facility and unspecified "collusion" between the NRC and utility officials to cover up the problem.

TO MEMBERS OF THE NUCLEAR REGULATORY COMMISSIONS

We, the undersigned, being unalterably opposed to any relaxation of existing Safety Standards for Nuclear Power Reactors, hereby petition the NUCLEAR REGULATORY COMMISSION to:

1. Deny the request of Public Service of New Hampshire for a reduction in the mandated 10 Mile Emergency Planning Zone surrounding the Seabrook Nuclear Reactor, and to:
2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition,

We, the undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and to:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices and procedures of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.

TO MEMBERS OF THE NUCLEAR REGULATORY COMMISSIONS

We, the undersigned, being unalterably opposed to any relaxation of existing Safety Standards for Nuclear Power Reactors, hereby petition the NUCLEAR REGULATORY COMMISSION to:

1. Deny the request of Public Service of New Hampshire for a reduction in the mandated 10 Mile Emergency Planning Zone surrounding the Seabrook Nuclear Reactor, and to:
2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition,

We, the undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and to:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices and procedures of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.

We, the undersigned, being unalterably opposed to any relaxation of existing Safety Standards for Nuclear Power Reactors, hereby petition the NUCLEAR REGULATORY COMMISSION to:

EX

1. Deny the request of Public Service of New Hampshire for a reduction in the mandated 10 Mile Emergency Planning Zone surrounding the Seabrook Nuclear Reactor, and to:
2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition, We, the Undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices, and procedures, of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.

Samuel Chilk
Secretary
U.S. Nuclear Regulatory Commission
Docketing and Service Branch
1717 H. St., N.W.
Washington, D.C. 20555

Re: Docket # FR Doc. 87-
4756

Dear Mr. Chilk,

I am writing to express my strong
opposition to any proposed rule change
that would serve to eliminate the
approval power of the Governors of
each state regarding evacuation plans.

I am counting on the N.R.C. to act
on our behalf and safeguard our health
and safety. I trust that if you are
concerned for our welfare, that you
will refuse to relax the existing safety
standards for nuclear power reactors. I
understand that there is much concern
that the NRC is more concerned with
the nuclear industry than public safety.
I believe your decision on this matter will be
a strong indication of where your "loyalties"
lie. Please give this ^{matter} your full attention
and act to protect us.

Thank you
Sincerely,

NRC critique said leaked to plant owner

Washington Post

WASHINGTON - Nuclear Regulatory Commission documents, alleging serious safety defects at a Louisiana nuclear-power plant were leaked to the plant's owner, apparently from the office of an NRC commissioner who later tried to destroy evidence of the security breach, the agency's chief inspector has told Congress.

Ben B. Hayes, head of the NRC Office of Investigations, told the Senate Governmental Affairs Committee Thursday that the documents, dated June 8, 1983, gave the Louisiana Power & Light Co. a "tremendous advantage" in a subsequent safety investigation at its Waterford nuclear plant near New Orleans.

He and other witnesses said the leak to LP&L appeared to be part of a pattern of NRC coziness with the nuclear-power industry, to the point of squelching potentially embarrassing investigations and compromising safety.

The document leak was not discovered until 1985 and was never fully investigated, Hayes said. He testified that he was ordered to turn over his notes and all copies of the documents to NRC Commissioner Thomas M. Roberts, who told the senators he destroyed them.

The documents outlined information gathered by a reporter about cracks in the concrete floor of Waterford's containment facility and unspecified "collusion" between the NRC and utility officials to cover up the problem.

TO MEMBERS OF THE NUCLEAR REGULATORY COMMISSIONS

We, the undersigned, being unalterably opposed to any relaxation of existing Safety Standards for Nuclear Power Reactors, hereby petition the NUCLEAR REGULATORY COMMISSION to:

1. Deny the request of Public Service of New Hampshire for a reduction in the mandated 10 Mile Emergency Planning Zone surrounding the Seabrook Nuclear Reactor, and to:
2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition,

We, the undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and to:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices and procedures of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.

**NRC critique
said leaked to
plant owner**

Washington Post

---WASHINGTON-- Nuclear Regu-
latory Commission documents, al-
leging serious safety defects at a
Louisiana nuclear-power plant
were leaked to the plant's owner,
apparently from the office of an
NRC commissioner who later tried
to destroy evidence of the security
breach, the agency's chief inspec-
tor has told Congress.Ben B. Hayes, head of the NRC
Office of Investigations, told the
Senate Governmental Affairs
Committee Thursday that the doc-
uments, dated June 8, 1983, gave
the Louisiana Power & Light Co. a
"tremendous advantage" in a
subsequent safety investigation at
its Waterford nuclear plant near
New Orleans.He and other witnesses said
the leak to LP&L appeared to be
part of a pattern of NRC coziness
with the nuclear-power industry,
to the point of squelching poten-
tially embarrassing investigations
and compromising safety.The document leak was not
discovered until 1985 and was
never fully investigated, Hayes
said. He testified that he was or-
dered to turn over his notes and
all copies of the documents to NRC
Commissioner Thomas M. Rob-
erts, who told the senators he de-
stroyed them.The documents outlined infor-
mation gathered by a reporter
about cracks in the concrete floor
of Waterford's containment facili-
ty and unspecified "collusion" be-
tween the NRC and utility officials
to cover up the problem.

Att: Samuel Chilk,

FRDoc 87-4756

I am opposed to any change in rules that would dilute or remove the present ability of local communities to devise, control, approve, or take any action regarding evacuation planning in relation to Seabrook Station Nuclear Power Plant.

Nancy St. Geminie

28 Harriman Rd.

Merrimac, Ma. 01860

NRC critique said leaked to plant owner

Washington Post

WASHINGTON — Nuclear Regulatory Commission documents alleging serious safety defects at a Louisiana nuclear-power plant were leaked to the plant's owner, apparently from the office of an NRC commissioner who later tried to destroy evidence of the security breach, the agency's chief inspector has told Congress.

Ben B. Hayes, head of the NRC Office of Investigations, told the Senate Governmental Affairs Committee Thursday that the documents, dated June 8, 1983, gave the Louisiana Power & Light Co. a "tremendous advantage." In a subsequent safety investigation at its Waterford nuclear plant near New Orleans.

He and other witnesses said the leak to LP&L appeared to be part of a pattern of NRC coziness with the nuclear-power industry, to the point of squelching potentially embarrassing investigations and compromising safety.

The document leak was not discovered until 1985 and was never fully investigated, Hayes said. He testified that he was ordered to turn over his notes and all copies of the documents to NRC Commissioner Thomas M. Roberts, who told the senators he destroyed them.

The documents outlined information gathered by a reporter about cracks in the concrete floor of Waterford's containment facility and unspecified "collusion" between the NRC and utility officials to cover up the problem.

TO MEMBERS OF THE NUCLEAR REGULATORY COMMISSIONS

We, the undersigned, being unalterably opposed to any relaxation of existing Safety Standards for Nuclear Power Reactors, hereby petition the NUCLEAR REGULATORY COMMISSION to:

1. Deny the request of Public Service of New Hampshire for a reduction in the mandated 10 Mile Emergency Planning Zone surrounding the Seabrook Nuclear Reactor, and to:
2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition,

We, the undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and to:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices and procedures of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.

TO MEMBERS OF THE NUCLEAR REGULATORY COMMISSIONS

We, the undersigned, being unalterably opposed to any relaxation of existing Safety Standards for Nuclear Power Reactors, hereby petition the NUCLEAR REGULATORY COMMISSION to:

1. Deny the request of Public Service of New Hampshire for a reduction in the mandated 10 Mile Emergency Planning Zone surrounding the Seabrook Nuclear Reactor, and to:
2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition,

We, the undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and to:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices and procedures of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.

OFFICE OF SECRETARY
DOCKETING & SERVICE
BRANCH

THE BOSTON GLOBE SATURDAY, APRIL 11, 1987 7

Secretary Samuel Chiles

Dear Sir:

I am opposed to any change in emergency planning that would reduce the authority of the governor in that planning process.

Sincerely,

Frank Krames

NRC critique said leaked to plant owner

Washington Post

WASHINGTON - Nuclear Regulatory Commission documents alleging serious safety defects at a Louisiana nuclear-power plant were leaked to the plant's owner, apparently from the office of an NRC commissioner who later tried to destroy evidence of the security breach, the agency's chief inspector has told Congress.

Ben B. Hayes, head of the NRC Office of Investigations, told the Senate Governmental Affairs Committee Thursday that the documents, dated June 8, 1983, gave the Louisiana Power & Light Co. a "tremendous advantage" in a subsequent safety investigation at its Waterford nuclear plant near New Orleans.

He and other witnesses said the leak to LP&L appeared to be part of a pattern of NRC coziness with the nuclear-power industry, to the point of squelching potentially embarrassing investigations and compromising safety.

The document leak was not discovered until 1985 and was never fully investigated, Hayes said. He testified that he was ordered to turn over his notes and all copies of the documents to NRC Commissioner Thomas M. Roberts, who told the senators he destroyed them.

The documents outlined information gathered by a reporter about cracks in the concrete floor of Waterford's containment facility and unspecified "collusion" between the NRC and utility officials to cover up the problem.

TO MEMBERS OF THE NUCLEAR REGULATORY COMMISSIONS

We, the undersigned, being unalterably opposed to any relaxation of existing Safety Standards for Nuclear Power Reactors, hereby petition the NUCLEAR REGULATORY COMMISSION to:

1. Deny the request of Public Service of New Hampshire for a reduction in the mandated 10 Mile Emergency Planning Zone surrounding the Seabrook Nuclear Reactor, and to:
2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition,

We, the undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and to:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices and procedures of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.

2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition, We, the undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and to:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices and procedures of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.

Post Office Box 301, Exeter, New Hampshire 03833

OFFICE OF DOCKETING & SERVICE
BRANCH

THE BOSTON GLOBE SATURDAY, APRIL 11, 1987 7

Dear Secretary Chilton,

I am opposed to any
rule change in the safety
planning of any nuclear power
plant.

You know, my
congressmen can cut your
budget, and will, if you
don't know what your
job is.

Yours truly,
Maurice A. Paulis

NRC critique said leaked to plant owner

Washington Post

WASHINGTON - Nuclear Regulatory Commission documents, alleging serious safety defects at a Louisiana nuclear-power plant were leaked to the plant's owner, apparently from the office of an NRC commissioner who later tried to destroy evidence of the security breach, the agency's chief inspector has told Congress.

Ben B. Hayes, head of the NRC Office of Investigations, told the Senate Governmental Affairs Committee Thursday that the documents, dated June 8, 1983, gave the Louisiana Power & Light Co. a "tremendous advantage" in a subsequent safety investigation at its Waterford nuclear plant near New Orleans.

He and other witnesses said the leak to LP&L appeared to be part of a pattern of NRC coziness with the nuclear-power industry, to the point of squelching potentially embarrassing investigations and compromising safety.

The document leak was not discovered until 1985 and was never fully investigated, Hayes said. He testified that he was ordered to turn over his notes and all copies of the documents to NRC Commissioner Thomas M. Roberts, who told the senators he destroyed them.

The documents outlined information gathered by a reporter about cracks in the concrete floor of Waterford's containment facility and unspecified "collusion" between the NRC and utility officials to cover up the problem.

TO MEMBERS OF THE NUCLEAR REGULATORY COMMISSIONS

We, the undersigned, being unalterably opposed to any relaxation of existing Safety Standards for Nuclear Power Reactors, hereby petition the NUCLEAR REGULATORY COMMISSION to:

1. Deny the request of Public Service of New Hampshire for a reduction in the mandated 10 Mile Emergency Planning Zone surrounding the Seabrook Nuclear Reactor, and to:
2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition,

We, the undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and to:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices and procedures of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.

TO MEMBERS OF THE NUCLEAR REGULATORY COMMISSIONS

We, the undersigned, being unalterably opposed to any relaxation of existing Safety Standards for Nuclear Power Reactors, hereby petition the NUCLEAR REGULATORY COMMISSION to:

1. Deny the request of Public Service of New Hampshire for a reduction in the mandated 10 Mile Emergency Planning Zone surrounding the Seabrook Nuclear Reactor, and to:
2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition,

We, the undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and to:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices and procedures of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.

Re: Amendment to 10 C.F.R. 50.47, Licensing of Nuclear Power Plants Where
State and/or Local Governments Decline to Cooperate in Offsite
Emergency Planning

On behalf of our Coalition, my comments on the proposed rule can be summarized
in two words: Reject It.

Concerning what promises to be the most ludicrous proposal that NRC has ever
sought to undertake, the thoughts I have about NRC at this time can be characterized
as ones of shock, dismay, anger and a sense that something must be done by
Congress to change the promotional bent of the Commission over the last few years.

Totally rejecting its mandate to consider the health and welfare of people
residing near a nuclear plant, NRC at this time seeks to license over
massive objection two of the most controversial and ill-sited plants ever
conceived, surpassing only because of the population density and evacuation
considerations the siting of the three-unit complex nearby us on Artificial Island
(Salem I & II and Hope Creek I) that is founded on bottomless sands and muck
that will liquify under severe earthquake situations.

Rejecting the many valid arguments posed by citizens and elected officials alike,
NRC has decided to license Seabrook and Shorham at any cost - preferring the
financial considerations of the utilities as they trample on the civil liberties of a
vast number of concerned citizens in several states.

No other attack on civil liberties in America, save the questionable policies of the
Internal Revenue Service, can come close to what NRC is attempting today. I
feel it is unnecessary to continue my comments further for the exercise will
only prove there is nothing good to say about the proposal. Instead I defer to
comments provided by the Union of Concerned Scientists to provide background and
substantiation to the feelings I have penned now and that still remain in my mind.

My feelings for NRC after this incident have forever been changed. I will work actively with our Coalition to promote changes which will prevent civil liberties from being compromised by bureaucrats in this way. But in the meantime, the Coalition decries this proposed rule change to 10 CFR 50.47, and demand that it be rejected completely.

Docketing and Service Branch (10CFR Part 50)
Washington, D.C. 20555

Dear Sirs:

I would ask that NO nuclear power plant be licensed without a workable State approved evacuation plan. I feel that there should be an evacuation zone that is 10 miles radius or larger. If need be, the utility must build adequate roads to the towns for the needed evacuation. Shoreham and Seabrook should NOT be licensed without the proper evacuation plans.

Thank you for your attention.

Sincerely,

Patrick M. Eggleston, Ph.D.

Dear Secretary

Re. Proposed amendment to Part 50
of N. R. C. regulations

I strongly urge you not to
change the rules on participation
of state and local governments in
nuclear evacuation planning.

The safety requirements for
areas surrounding nuclear plants
should be strengthened, not weakened.

The health and safety of the
citizens of Long Island is at stake
as this Island could not be successfully
evacuated.

Very truly yours,
Don Palmer

Dear President Reagan,

87 APR 23 PM 13

OFFICE OF SECRETARY
DOCKETING & SERVICE
BRANCH

I am very concerned about the recent proposal made by the Nuclear Regulatory Commission in a 4 to 1 vote. The proposal would remove the requirement that the local town and county government agree on an evacuation plan and suggests that they would be there if such a situation did arise.

I do not agree with this proposal. I am one of many Long Islanders that does not want the Shoreham plant opened. Indeed a majority of Long Islanders do not want the LIKCO plant to go full licence and our government representatives are supporting our stance. I see the proposal in direct conflict with the wants and interests of the people of Long Island.

I hope that you shall note this recent proposal and take action to fight against it. Thank you for your time and concern.

Sincerely,

Mary Anne Devine

Dear Mr. Secretary.

OFFICE OF SECRETARY
DOCKETING & SERVICE
BRANCH

The threat by the Nuclear Regulatory Commission to approve licensing of such plants as those at Shoreham and Seabrook, without adequate evacuation plans, is nothing short of a blatant disregard for the lives of people.

The lessons of 3-Mile Island and Chernobyl have not been lost on an American public that is deeply concerned over the whole nuclear issue.

Apparently the Commission feels that Federal power can be used to ride roughshod over the fears of those who would be the most serious victims of an accident.

I think that you will find that people everywhere in this country resent this attitude and that there will be more and more opposition. Many feel that by making these decisions in the way that is being done, you are depriving them of their very basic human rights.

Sincerely,

Alice Giovannella

NRC critique said leaked to plant owner

Washington Post

WASHINGTON - Nuclear Regulatory Commission documents, alleging serious safety defects at a Louisiana nuclear-power plant were leaked to the plant's owner, apparently from the office of an NRC commissioner who later tried to destroy evidence of the security breach, the agency's chief inspector has told Congress.

Ben B. Hayes, head of the NRC Office of Investigations, told the Senate Governmental Affairs Committee Thursday that the documents, dated June 8, 1983, gave the Louisiana Power & Light Co. a "tremendous advantage." In a subsequent safety investigation at its Waterford nuclear plant near New Orleans.

He and other witnesses said the leak to LP&L appeared to be part of a pattern of NRC coziness with the nuclear-power industry, to the point of squelching potentially embarrassing investigations and compromising safety.

The document leak was not discovered until 1985 and was never fully investigated, Hayes said. He testified that he was ordered to turn over his notes and all copies of the documents to NRC Commissioner Thomas M. Roberts, who told the senators he destroyed them.

The documents outlined information gathered by a reporter about cracks in the concrete floor of Waterford's containment facility and unspecified "collusion" between the NRC and utility officials to cover up the problem.

This is not only breathtaking, it is disgusting!

AMESBURY • MERRIMAC • NEWBURY • NEWBURYPORT • SALISBURY • WEST NEWBURY • AND BEYOND

Not the Nuclear Power Industry Democrat
principles are at stake! Sincerely
Joanna Tai

TO MEMBERS OF THE NUCLEAR REGULATORY COMMISSIONS

We, the undersigned, being unalterably opposed to any relaxation of existing Safety Standards for Nuclear Power Reactors, hereby petition the NUCLEAR REGULATORY COMMISSION to:

1. Deny the request of Public Service of New Hampshire for a reduction in the mandated 10 Mile Emergency Planning Zone surrounding the Seabrook Nuclear Reactor, and to:
2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition,

We, the undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and to:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices and procedures of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.

TO MEMBERS OF THE NUCLEAR REGULATORY COMMISSIONS

We, the undersigned, being unalterably opposed to any relaxation of existing Safety Standards for Nuclear Power Reactors, hereby petition the NUCLEAR REGULATORY COMMISSION to:

1. Deny the request of Public Service of New Hampshire for a reduction in the mandated 10 Mile Emergency Planning Zone surrounding the Seabrook Nuclear Reactor, and to:
2. Approve no emergency response plans unless they have the approval and participation of all States within a 10 mile radius, and to:
3. Establish, no later than June 1, 1987, an Independent Commission to investigate the design, construction, documentation, quality assurance, regulatory compliance and management of the Seabrook Nuclear Reactor in order that any conditions which compromise Public Safety, Health, and Economic Security will be resolved prior to the issuance of any further license, permit or approval which would allow a nuclear chain reaction to occur.

Should the Nuclear Regulatory Commission fail to comply with the terms of this petition, We, the undersigned, petition the CONGRESS of the UNITED STATES to:

1. Suspend the funding of the NUCLEAR REGULATORY COMMISSION and to:
2. Immediately convene a CONGRESSIONAL INVESTIGATION into the purposes, organization, practices and procedures of the NUCLEAR REGULATORY COMMISSION as they pertain to public safety, health, and economic security.
