1. Project Director's Assessment

1. Identifiers		1b. Reporting Period: 3rd Quarter FY 1999
1a. Project Title / Number: West Valley Demonstration Project, West Valley, New York/EX-05		1f. Performing Organizations: West Valley Nuclear Services Company Overall responsibility for design, construction, testing and operation. Major WVNS Subcontractors: Pacific Northwest National Laboratories - Technology Support Dames and Moore - Environmental Support Burns - Security
1c. Managing DOE Field Location: Ohio Field Office		
1d. Project Sponsor / Program Office Contact: Office of Waste Management M.E.Rawlings (301)903-7452		
1e. Project Director: B. A. Mazurowski WV-37 West Valley, New York 14171 (716) 942-4068		

2. Project Director's Personal Assessment:

2a. Summary Status

LEGEND

NOTE: The Project Director's assessment of key item concerns are contained on page 5.

During the 3Q99 three HLW canisters were filled. The melter was idle, otherwise, at which time various maintenance and preparation activities were accomplished. A total of 242 canisters have been processed, and 236 completed canisters have been located in the HLW Interim Storage Racks. Thirty-eight S-70 boxes and Eighteen B-25 boxes of miscellaneous LLW debris waste were shipped to Envirocare for disposal during the quarter. A total of 10,890 cubic feet of LLW was shipped for disposal during the quarter. A total of 20,802 cubic feet(589 cubic meters) of LLW has been shipped for disposal during FY 1999.

2. Project Director's Narrative Highlights (continued)

Secretary of Energy Bill Richardson visited the West Valley Demonstration Project on May 4, 1999. During his visit the Secretary toured Project facilities, met with Project Stakeholders, presented Science Awards to local students and discussed DOE's commitment to clean-up efforts at the West Valley Demonstration Project (WVDP). Secretary Richardson complimented Stakeholder, DOE, and contractor employees on their accomplishments. The Secretaries visit and comments were extremely well received by the Stakeholders and Project employees.

Testing of the size-reduction tooling to be used in the Vitrification Expanded Material Processing System and training of operators at the mockup continues. The adamant saw, modified shear and the band saw have been delivered in preparation for "size reducing" the first item of vitrification expended material toward completion of Technology Deployment Commitment OH-WV903 to size reduce at least one item of vitrification expended material suspected to be contaminated with HLW in cell using select tooling by September 30, 1999.

Transnuclear (TN) submitted preliminary results of criticality calculations for the TN-BRP and TN-REG casks. The results indicate full load shipments of spent nuclear fuel from WVDP to Idaho National Engineering Laboratory (INEL) may be feasible if the NRC allows 90% credit for the actual boron content of the basket. Containment analysis results for full loads for both casks are also acceptable.

On June 3, 1999, the U.S. Nuclear Regulatory Commission (NRC) Commissioner signed the Staff Requirements Memorandum (SRM) which outlines the proposed D&D criteria for the WVDP. The SRM has been made available to DOE, New York State Energy Research and Development Authority (NYSERDA), and Citizen Task Force (CTF).

Sciencetech has completed revising the conceptual design for the Remote-Handled Waste Facility in preparation for the conceptual Design Review June 15, 1999. The remaining design review material, including the revised Preliminary Process Hazard Analysis, will be mailed out by June 4, 1999.

Planning is underway to perform a demonstration for the CTF and Stakeholders, of the reversibility of the grout being considered for use in stabilizing the HLW tanks and the Process Building under a DEIS Alternative III scenario. The demonstration is tentatively planned for later this summer.

SAIC, WVNS, DOE and NYSERDA are reviewing comments received from NYSDEC and preliminary comments received from the U.S. Army Corps on the inputs and approach presented by SAIC in the Evolution Landscape Model. Comments are also expected from NRC in the next few weeks. Draft comments have been received from the U.S. Army Corps. SAIC is working with DOE and NYSERDA on strategies to resolve the concerns identified.

Representatives from the Westinghouse Government Services Group visited the site to evaluate the WVNS implementation of the DOE VPP guidelines. The review, which was conducted to determine any necessary program enhancements prior to the DOE review expected in October, focused on the draft application and reference documents, and included a site tour and employee interviews. The team was enthusiastic about the site safety culture and provided recommendations for improving the program. Recommendations from the review will be incorporated into the VFP application prior to submittal to DOE-OH

Progress continues towards high-level waste (HLW) tank heel removal. Completed work includes Zeolite transfers from HLW tank 8D-1 to tank 8D-2 utilizing all the available mobilization pumps resulting in a FY 1999 total of approximately 386,356 curies (Ohio Strategic Plan Management Commitment Milestone #21 is to transfer 400,000 curies of CS-137 by Sept. 30, 1999). Continuing work activities include water volume reduction of approximately 31,000 gallons of the Supernatant Treatment System (STS) effluent using the liquid waste treatment system, system checkout of the dual-arm camera assembly to be installed in the N-12 riser of HLW tank 8D-1, and hands-on testing of the saws and grapples that are to be used to remotely size reduce vitrification expended material in the Vitrification Cell. To date, 325,462 curies of CS-137 and SR-90 (Ohio Strategic Plan Management Commitment Milestone #22e is to transfer 500,000 curies by Sept. 30, 1999) have been transferred from HLW tank 8D-2 to holding tank in the Vitrification Facility during FY 1999.

5. Significant Problems/Variance Analysis

Project Title: West Valley Demonstration Project

Reporting Period: 3rd Quarter FY1999

5a. Problems, Impact on Project, Corrective Actions

A growing concern exists in the area of resources/funding. Current scenarios that fund the WDDP below requested planning levels in future years could delay the schedule for vitrification of the liquid high-level wastes at West Valley as well as the transition to Project Completion by DOE. As aging high-level waste tanks and main plant facilities approach the end of their design life, the best interests of the public and other stakeholders can be served by continuing on the current schedule with requested funding for the high-level wastes processing, deactivation, and waste management activities. Additionally, since the commencement of Radioactive Vitrification Operations in FY96, melter life is limited and delay could possibly impact vitrification of the HLW tank heels and high activity waste that need to occur through FY 2001. Adequate funding to ensure completion of all High-Level Waste processing is required to prevent significant interruption of the processing.

Resolution of Draft Environmental Impact Statement (DEIS) comments and revisions to DEIS technical support documents continue. Preferred Alternative development and DOE/NYSERDA responsibility discussions also continue. Completion of these items is required before preparation of the Supplemental NEPA document which will contain the preferred alternative (PA) and NRC Decontamination and Decommissioning (D&D) Criteria. Following a public review of the supplemental NEPA, a Final Environmental Impact Statement (FEIS) and subsequent Record of Decision (ROD) is targeted to be published. Until a FEIS and ROD are issued and a detailed cost and schedule estimate can be developed and a baseline is approved for the FEIS/ROD scope of work, the long range cost and schedule impact is unknown/to be determined (TBD).

Additionally, the Project faces challenges in establishing and securing funding for HLW and TRU waste shipment programs including receiver site modifications, cask development/licensing/procurement and shipping agreements.

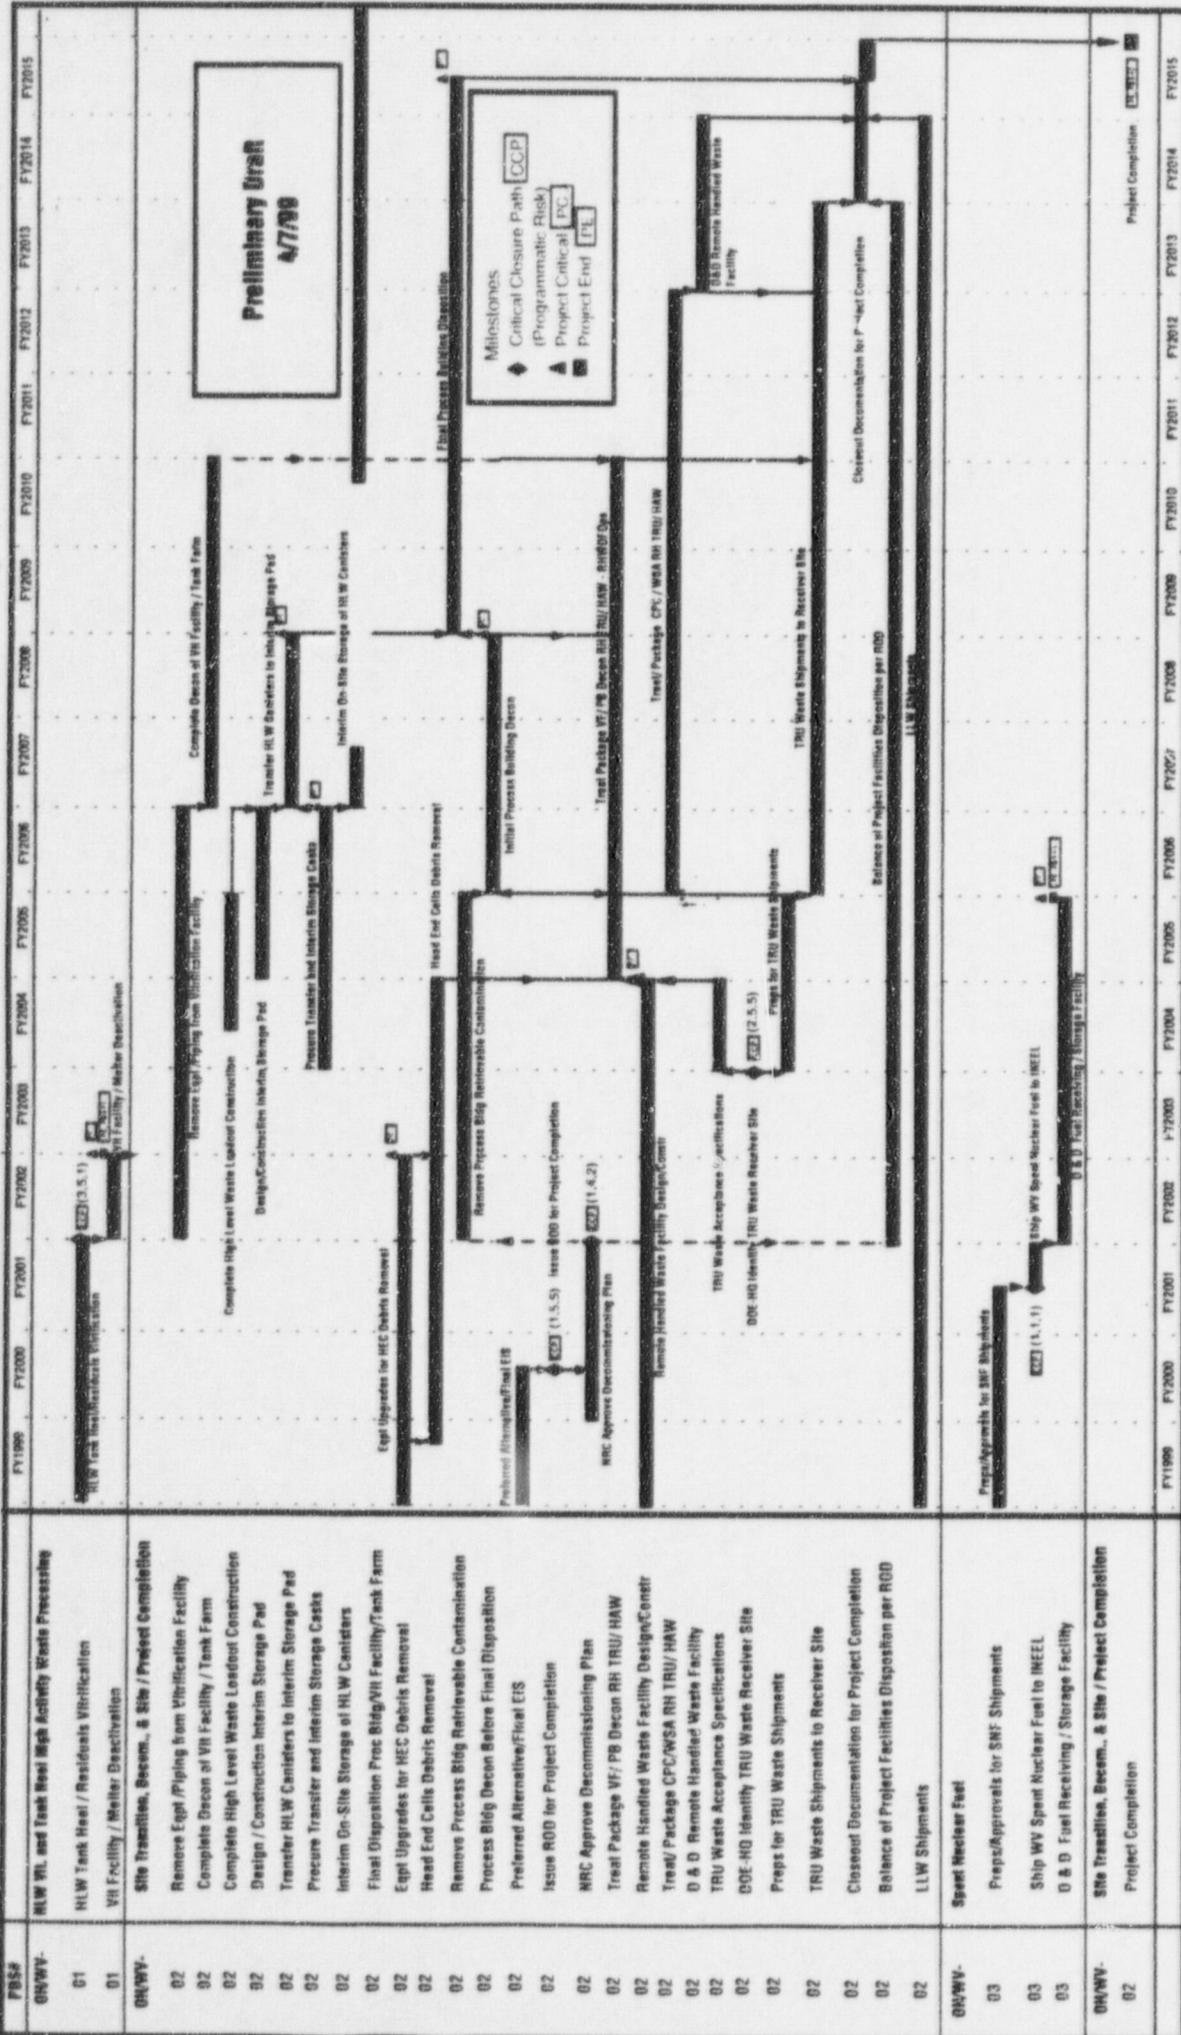

Based upon these uncertainties and the sensitivities associated with critical HQ decisions required by the project that are well documented in the 1999 update for Accelerated Clean-up: Paths to Closure, there is a possibility of slipping the Project Completion date beyond fiscal year (FY) 2015.

5b. Items Requiring Headquarters' Action

FY1999:

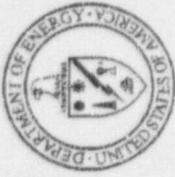

- Resolution of issues regarding the respective responsibilities of DOE/NYS for Project completion, Site Closure and/or long-term management.

Project Director's Progress Report

Project Title: West Valley Demonstration Project

Technical Performance Parameters ITEM	TECHNICAL BASELINE	PERFORMANCE
--	--------------------	-------------

Safety and Environmental Quality of Engineered Systems

Maintain excellent safety performance.

Five OSHA recordable incidents occurred at the WVDP during the quarter. Total Recordable Case Rate (TRC) is 1.68. There were zero reportable internal, skin, clothing, and nasal contamination events during the quarter.

Maintain and Control Radiological Conditions

Maintain effective and efficient operation consistent with ALARA safety, environmental concerns.

Cumulative ALARA performance through June brings the 1999 fiscal year-to-date total to 9,796 person-rem. This performance was below budget through the third quarter.

Safety and Environmental Quality of Inherited Systems and Facilities

Ensure acceptable operation and upgrading of the established Safety and Environmental Systems

The WVDP is again pursuing the DOE Voluntary Protection Program (VPP) Star Award. Representatives of Westinghouse Government Services Group visited the site to evaluate the WVNS implementation of the DOE VPP Guidelines prior to submittal to DOE-OH.

Low-Level Waste Form

Volume Reduction of Low-Level Waste.

A total of 105,890 cubic feet of LLW has been shipped for disposal during the third quarter of FY 1999 exceeding the Ohio Strategic Plan Management Commitment Milestone #23 to ship 15,000 Cubic feet (425 cubic meters) of class A LLW for disposal. Fiscal Year total shipped is 20,802 Cu ft (589 cu meters).

Post Solidification D&D

Issue a Record of Decision (ROD).

The NRC Staff Requirements Memorandum which outlines the proposed D&D criteria for WVDP was signed and made available to DOE, NYSERDA and the Citizen Task Force (CTF).

Energy Secretary Richardson tries his hand at operating the mechanical arm which will be used to clean out the bottom of the high-level waste tank

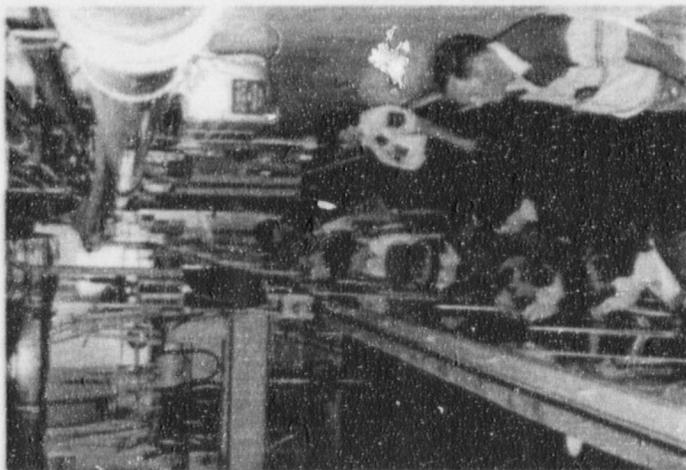

WV Director Barbara Mazurowski and DOE-Ohio Manager Leah Dever escorted the Secretary on tour.

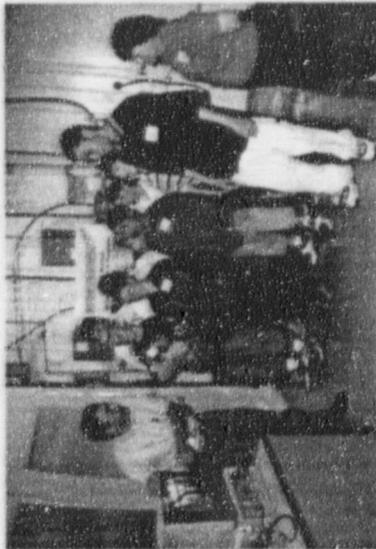

During Secretary Richardson's visit on May 4, 1999, he directed that the Preferred Alternative negotiations with New York State should be done within one year.

Al Feuz Demonstrates the ever popular manipulator

Students tour Fuel Receiving and Storage and view the pool of spent fuel.

A visit to the Main Plant included the lower level where hot cells are being cleaned out.

Notes:

All entries in thousands of dollars - sum of the parts may vary from total due to rounding.

Assumptions:

Project Budget is comprised of DOE and NY components

Outyear project funding profile based on Paths To Closure Document (May 17, 1999)

Project cost sharing continues at DOE:NY (90%:10%) except for Fuel - Doe (100%); and an additional (17%) on EIS costs
