ABSTRACT (Limit to 1400 spaces, i.e., approximately fifteen single-space typewritten lines) (16)

On May 9, 1986, the EFT System (Control Room HVAC) automatically transferred to the toxic chemical mode as a result of a hydrogen chloride monitor tape break which resulted in a spurious trip of the monitor. The tape was advanced past the break, the monitor reset and the EFT System returned to the normal mode of operation.

The cause of the event was a small imperfection on the tape which caught on the detector head, tearing the tape, and caused a spurious trip of the monitor. The manufacturer has stated that occasional imperfections during manufacture of the tape cannot be entirely eliminated.

Subsequent operation has been satisfactory. No further, short term, corrective action is planned.
