Dan A. Nauman
Vice President
Nuclear Operations

October 31, 1986

Mr. Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Subject: Virgil C. Summer Nuclear Station
Docket No. 50/395
Operating License No. NPF-12
Anticipated Transients without Scram

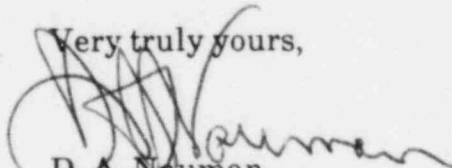

Dear Mr. Denton:

Your letter dated September 23, 1986, forwarded the Safety Evaluation (SE) of Westinghouse Owners Group Topical Report WCAP-10858, "AMSAC Generic Design Package" and requested South Carolina Electric & Gas Company's (SCE&G) schedule for completion and implementation of the plant specific design features addressed in the SE.

SCE&G is developing a plant specific AMSAC system based on the Westinghouse generic design with AMSAC actuation on low steam generator water level. The AMSAC design is scheduled for implementation during our fourth refueling outage with an estimated starting date of October 1, 1988. Details of the plant specific design will be provided no later than five months in advance of the outage, which is April 30, 1988 based on the present schedule.

Should you require additional information, please call at your convenience.

Very truly yours,

D. A. Nauman
