Don D. Cho, M.D.
1206 McArthur
P. O. Box 447
Webb City, MO 64870

Dear Dr. Cho:

Enclosed is Amendment Number 01 to your license. This amendment allows you to perform any diagnostic procedures using technetium-99m. We have not authorized the use of all Group I and II material since your experience has only been with technetium-99m. You will need to provide us with documentation of training using the other radiopharmaceuticals listed in Groups I and II.

For the authorization to use xenon-133, we will need additional information. Please refer to Regulatory Guide 10.8 appendix M for reference to the specific information we require.

Please note: gallium-67 and indium-111 are not under NRC's jurisdiction therefore, we cannot address these uses on your license. Since the state has authority over gallium-67 and indium-111, you will need to contact the Bureau of Radiological Health in Jefferson City, Missouri for their requirements covering these isotopes.

If you have any questions or require clarification on any of the information stated above, you may contact us at (312) 790-5625.

Sincerely,

Original Signed By
Patricia M. Vacherlon
