

ENCLOSURE

NOTICE OF VIOLATION

Campbell, McQueen and Paris
Herndon, Virginia

Docket No. 030-22288
License No. 08-23510-01

During the Nuclear Regulatory Commission (NRC) inspection conducted on October 14, 1986, violations of NRC requirements were identified. The violations involved the licensee moving to a new location without notifying the NRC, failure to maintain radiation exposure records, source leak test records, record of receipt of byproduct material, inventories, posting, and a failure to carry shipping papers during the transport of radioactive materials. In accordance with the "General Statement of Policy and Procedure for NRC Enforcement Actions," 10 CFR Part 2, Appendix C (1986), the violations are listed below:

- A. 10 CFR 20.401(a) requires in part that each licensee shall maintain records of radiation exposure of all individuals for whom personnel monitoring is required.

Contrary to the above, no records of radiation exposure were available on October 14, 1986. The licensee has been required to maintain records of radiation exposure of these individuals since July 1985.

This is a Severity Level IV violation (Supplement VI).

- B. License Conditions 1 and 10 show the address of the licensee to be 400 West Service Road, Chantilly, Virginia.

Contrary to the above, the licensee was located at a different address in Herndon, Virginia. This change of location also involved an unauthorized change in the storage location of licensed material. The NRC was not notified of this change of address or storage location.

This is a Severity Level IV violation (Supplement VI).

- C. License Condition 13(b) requires that the licensee maintain records of leak tests performed on sealed sources. Leak tests are performed at six-month intervals.

Contrary to the above, on October 14, 1986, the only leak test records in the possession of the licensee were for leak tests performed in October 1984 and September 1986.

This is a Severity Level V violation (Supplement VI).

08-23510-01 PDR

- D. License Condition 15 requires that the licensee perform inventories of all gauges received and possessed under the license at six-month intervals.

Contrary to the above, inventories have not been performed by the licensee since the start of licensed activities in July 1985.

This is a Severity Level V violation (Supplement VI).

- E. License Condition 17 states in part that the Radiation Protection Officer for this licensee is William Abrams.

Contrary to the above, William Abrams has not been employed by the licensee since approximately July 1986.

This is a Severity Level V violation (Supplement VI).

- F. 10 CFR 30.51 requires in part that the licensee maintain records of receipt for all radioactive materials received by the licensee.

Contrary to the above, no records of receipt were in the possession of the licensee on October 14, 1986.

This is a Severity Level V violation (Supplement VI).

- G. 10 CFR 71.5(a) requires that each licensee who transports licensed material outside of the confines of its plant or other place of use shall comply with the applicable requirements of the regulations, appropriate to the mode of transport, of the Department of Transportation in 49 CFR Parts 170-189.

49 CFR 172.200(a) requires that each person who offers a hazardous material for transportation shall describe the hazardous material on a shipping paper.

Contrary to the above, the licensee has transported licensed hazardous material outside the confines of its office since approximately July 1985, without shipping papers.

This is a Severity Level V violation (Supplement VI).

- H. License Condition 17 requires in part that the licensee maintain a monthly exchange of film badges for employees who require personnel monitoring.

Contrary to the above, as of October 1, 1986, the licensee has contracted for a quarterly exchange of film badges without the approval of the NRC.

This is a Severity Level V violation (Supplement VI).

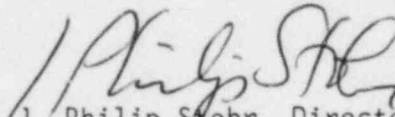

- I. 10 CFR 19.11 requires a licensee to post current copies of certain documents near or in a licensed activity location. These documents include 10 CFR 19, 10 CFR 20, the license complete with amendments, referenced documents, and operating procedures. If posting is not practicable, the licensee may post a notice that describes the documents and where they may be examined. The licensee is also required to post Form NRC-3, "Notice to Employees," to permit individuals who frequent any portion of a "restricted area" to observe the form.

Contrary to the above, on October 14, 1986, the licensee had not posted the documents or the notice of where the documents might be examined, nor had the licensee posted Form NRC-3 in or near a restricted area.

This is a Severity Level V violation (Supplement VI).

Pursuant to the provisions of 10 CFR 2.201, Campbell, McQueen and Paris is hereby required to submit to this Office within 30 days of the date of the letter transmitting this Notice a written statement or explanation in reply including for each violation: (1) admission or denial of the violation, (2) the reason for the violation if admitted, (3) the corrective steps which have been taken and the results achieved, (4) the corrective steps which will be taken to avoid further violations, and (5) the date when full compliance will be achieved. Where good cause is shown, consideration will be given to extending the response time.

FOR THE NUCLEAR REGULATORY COMMISSION

J. Philip Stohr, Director
Division of Radiation Safety
and Safeguards
