From: Commanding Officer, Naval Regional Medical Center, Oakland, CA 94627
To: Radioisotope Licensing Branch, Division of Fuel Cycle and Material
Safety, Office of Material Safety and Safeguards, United States
Nuclear Regulatory Commission, Washington, D.C. 20555
Via: Bureau of Medicine and Surgery (Code 3C22), Washington, D.C. 20372
Subj: NRC Byproduct Material License No. 04-00716-02; request for amendment
to

1. It is requested that the subject license be amended as follows:

a. Increase the limit of section 8.0 to 30 millicuries for Iodine-125. This increase is necessitated by a huge increase in the number of tests to be performed by the Drug Screening Laboratory located on this facility. This increased limit is needed to insure that the limit will not be exceeded even with an overlap in delivery of kits.

b. Increase the limit in section 8.P to 30 millicuries to allow for the storage of LSA radioactive waste prior to shipment for disposal and for on sight decay to background. Storage will be in two buildings located away from the main and high traffic areas. One of the buildings, BLDG 110, is a two story wooden structure which is shared with Public Works as a storage building. The radioactive material storage area is secured from the rest of the storage area by a chain link enclosure which is locked. The second building, BLDG 85, is a single story building divided into two halves by a wall with no access between halves. The half used for radioactive waste storage is secured at all times and is posted. The other half is used by the fire department for storage only.

2. Questions concerning this license amendment application may be directed to the NRMCC, Oakland Radiation Safety Officer, LCDR L. F. Parr, at 415-639-2526.
