Re: Control No. 81529

Dear Ms. Frazier:

This is in response to your letter of July 18, 1986 in which you requested additional information regarding the above-referenced materials license application. Following is the additional information:

1. This is to confirm that I am Managing Owner of Governor's Radiology.
2. Attached is a more detailed diagram of the proposed nuclear medicine room. Please note, all radiopharmaceuticals received from the central radiopharmacy in unit doses will be stored in lead (Pb) containers provided by the supplier. Radiopharmaceutical doses will not be prepared in our facility. Radioactive waste materials generated at our facility will be returned to the supplier, on a daily basis.
3. We have supplemented our procedures for ordering and accepting radioactive materials to include precautions to be followed by our personnel in the event of receipt of a damaged package. The procedures now include the following statements:
 - a. The RSO will be notified immediately in the event such a damaged package is received.
 - b. The carrier will be requested to remain until it can be determined by the RSO and/or his delegate that neither the carrier nor the transport vehicle is contaminated.
 - c. Specific procedures for handling packages suspected of being contaminated have been added to our radiation safety procedure manual.
4. Please delete the 121 South Wilke, Arlington Heights, IL address from Item 23, as a use site for I-131. This address was inadvertently entered into the application. We confirm that I-131 and all other radioactive materials authorized by our license will be used only at 17900 Governor's Highway, Homewood, IL 60430.

REGION III

OCT 2 1986

Thank you for your attention given to our application. We hope the information provided is sufficient to continue the review of the application, and look forward to receiving the license document. Should additional clarification be needed, please send a duplicate letter to Standard Nuclear Consultants, Ltd., 1S.016 Donny Hill Road, Elburn, IL 60119, or call them directly at (312)365-5858.

Sincerely,

Yunus Nomanbhoy, M.D.

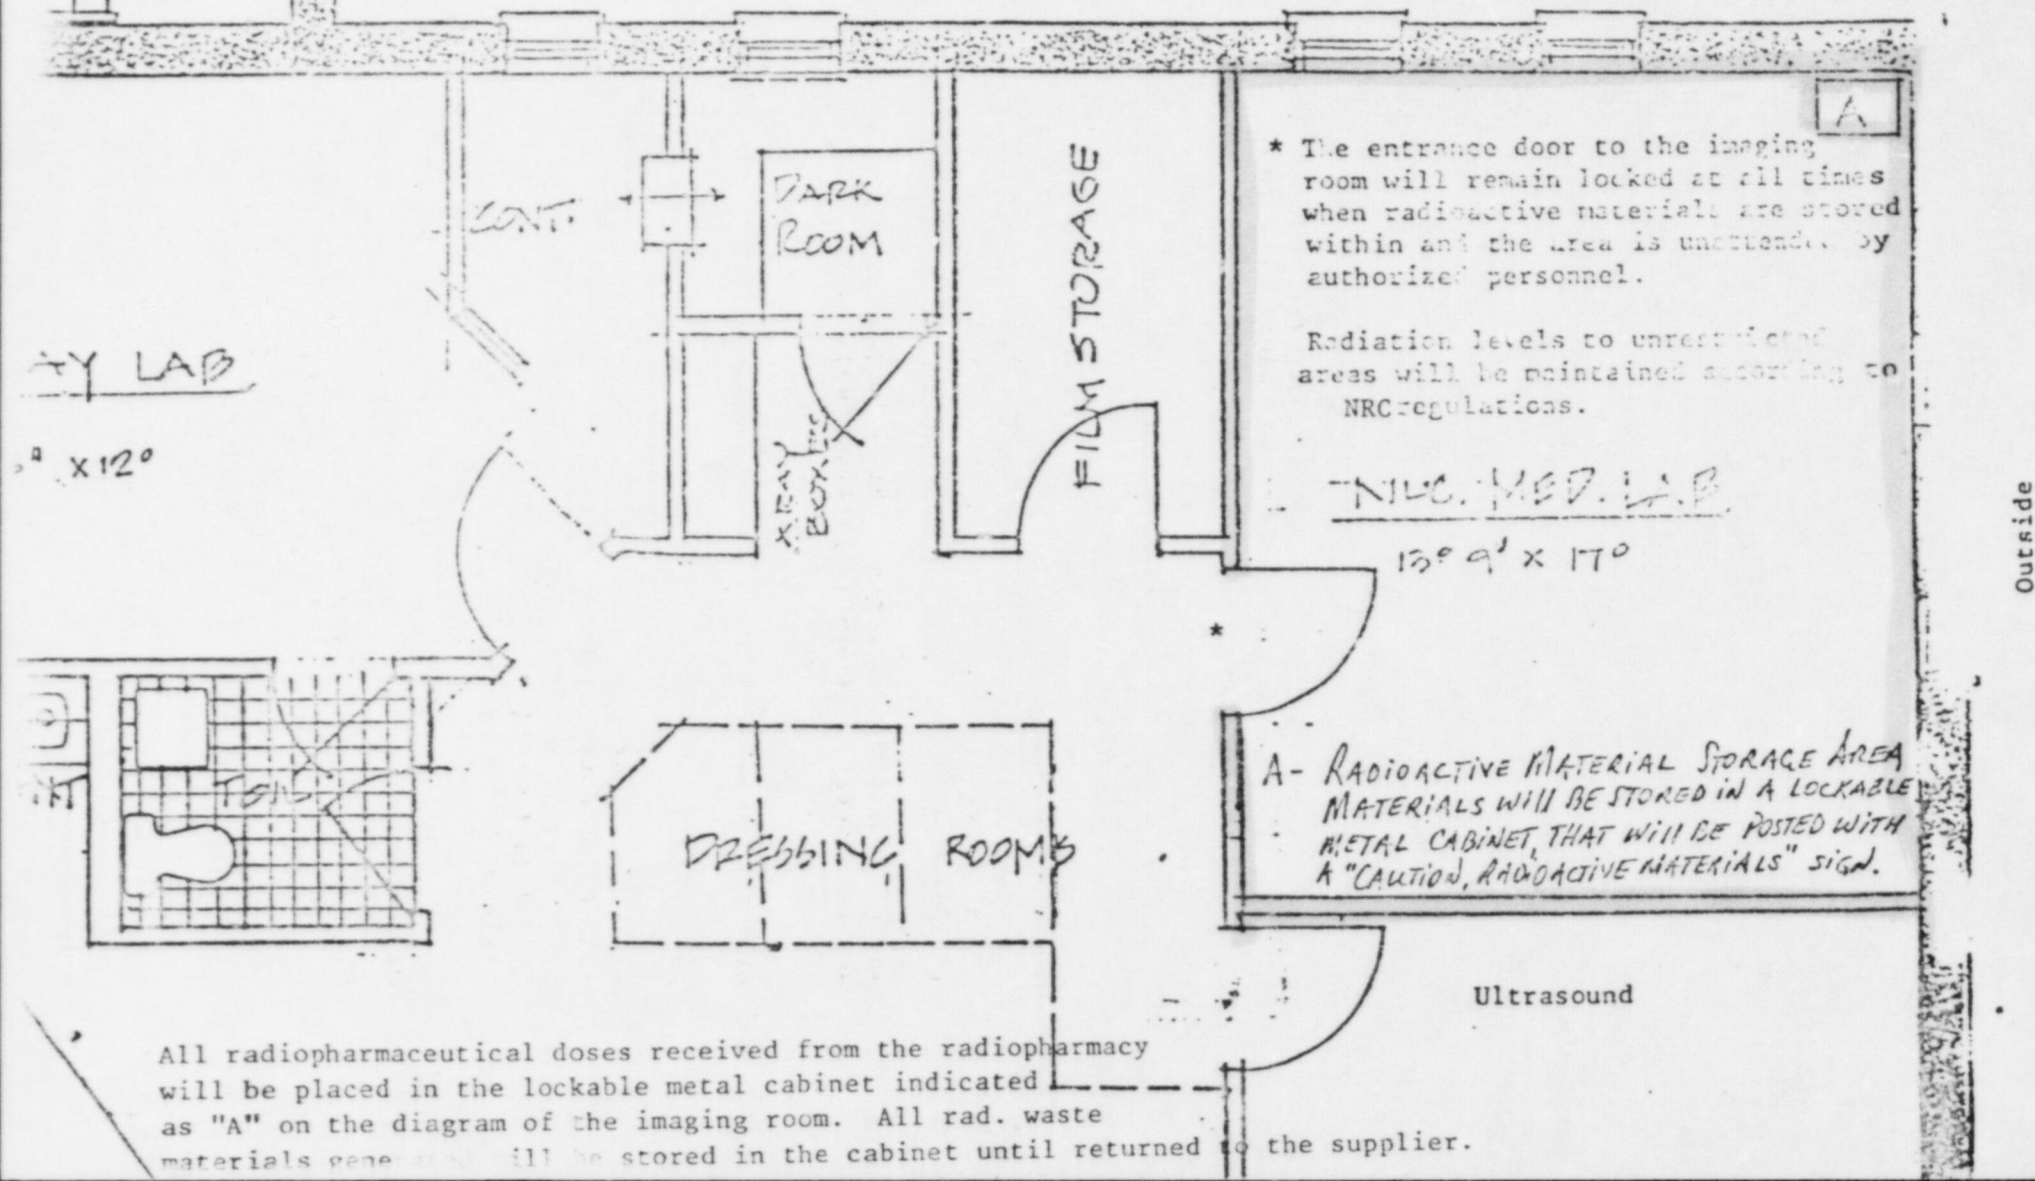

cc: Standard Nuclear Consultants, Ltd.

Nuclear Imaging Room

Rad. waste materials will be stored in a lead (Pb) container of approx.

1/8" Pb. Such waste will be stored at "A".
Outside

Item	11
Page	19

All radiopharmaceutical doses received from the radiopharmacy will be placed in the lockable metal cabinet indicated as "A" on the diagram of the imaging room. All rad. waste materials generated will be stored in the cabinet until returned to the supplier.
