Gentlemen:

DOCKETS 50-266 AND 50-301  
MODIFICATION TO TECHNICAL SPECIFICATION CHANGE REQUEST 114  
CONTAINMENT HYDROGEN MONITORS AND ADMINISTRATIVE CHANGES  
(TAC'S M64692 AND M64693)  
POINT BEACH NUCLEAR PLANT, UNITS 1 AND 2

Our letter dated January 8, 1987, requested license amendments for Point Beach Nuclear Plant, Units 1 and 2, to incorporate changes to Technical Specification 15.3.5, as well as two other changes of an administrative nature. One of the two administrative changes involves revision of Table 15.3.5-1, "Engineering Safety Features Initiation Instrument Setting Limits." This proposed change would revise setting limit column entries for Items 9, 10a, and 10b to remove the ambiguity of the present wording.

We are currently evaluating the replacement of the 480 volt load shedding undervoltage relays, the components addressed in Item 10b of the table. Upon completion of our evaluation, we will be submitting a proposed amendment which will specify setting limits of the new relays. We, therefore, request that you not consider as part of Technical Specification Change Request 114 our requested changes to Table 15.3.5-1.

In accordance with 10 CFR 50.91(a) and 50.92, we have examined this modification to our January 8, 1987, submittal and have determined that the significant hazards considerations evaluation presented in our original amendments request is unchanged. This submittal is merely a withdrawal of a portion of our Technical Specification Change Request 114.

Please contact us if you have any questions concerning this request.

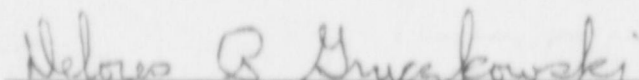

Very truly yours,

  
C. W. Fay  
Vice President  
Nuclear Power
