Mr. John Maderia Materials Licensing Section U. S. Nuclear Regulatory Commission Region III 799 Roosevelt Road Glen Ellyn, Illinois 60137

Reference: Control No. 81697

License No. 12-13568-02

Dear Mr. Maderia:

As per our conversation this morning, attached please find in duplicate, copies of the locations at hospitals where we plan to use the radioactive material (amendment application dated July 14, 1986).

Please note that the storage places indicated in our license amendment application have walls that reach all the way to the ceiling, preventing access to the storage location through adjoining storage rooms.

If the fire codes require that we do not use electric heaters during the cold weather months, we will store all of the radiation materials which may be effected by cold weather in a heavily insulated box which will be heated by an electric bulb of 100 to 150 watts. We feel that the heat from this bulb should be sufficient to prevent the freezing of any liquids, such as normal saline used for elution of the generator.

I hope the information submitted is satisfactory for the prompt review of our application. Should you have any questions, please do not hesitate to contact me.

I appreciate your time and suggestions.

Sincerely.

Ashwin Patel
