Conference Summary

Conference held on November 13, 1986 (Report 30-11802/86-02)

An enforcement conference was held at the Region IV Uranium Recovery Field Office in Denver, Colorado, to discuss the findings of the NRC inspection conducted on October 21, 1986. The violations and issues of concern were detailed by the Region IV staff, and the licensee responded to each item.

Results: The NRC presented eight violations of NRC requirements and expressed concern regarding the management control of the licensed program. The licensee representative responded relative to his understanding of the violations and presented no information that would allow deletion or modification of the violations. The licensee described the actions taken or planned to bring the licensed program within full compliance of NRC requirements, but offered little at this time in the way of planned management controls that would be implemented to ensure full compliance would be maintained in the future. The licensee repeated his commitment not to use the radioactive source until the NRC had determined that previous commitments made by the licensee during the licensing process had been met. The NRC staff emphasized the enforcement options available and stated that a decision would be made as to the appropriate enforcement action and that the licensee would then be notified.
