Attention: H. R. Denton
Office of Nuclear Reactor Regulation

Gentlemen:

SUBJECT: APPROVED VERSION NEDE-24094

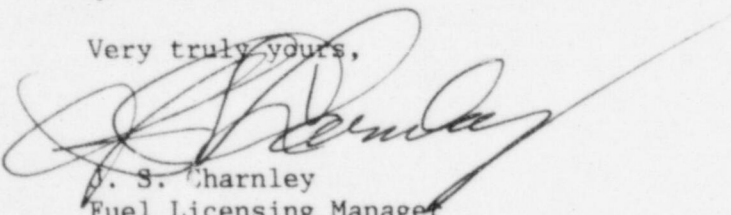

Provided with this letter are 22 copies of NEDE-24094-A, the proprietary version of "Loss-of-Coolant Accident Analysis Methods for BWR 2/3 with Drilled Lower Tie Plates," August 1986, for appropriate distribution within the NRC. The non-proprietary version is being prepared and will be transmitted in the near future.

NEDE-24094-A has been published by GE to comply with procedures established in NUREG-0309.

Please note that the information contained in the enclosed document, NEDE-24094-A, is of the type which GE customarily maintains in confidence and withholds from public disclosure. This information has been handled and classified as proprietary to GE as indicated in the affidavit attached. WE hereby request that this information be withheld from public disclosure in accordance with the provisions of 10CFR2.790.

Please call P. A. Lambert (408-925-1417) of my staff, if you have any questions.

Very truly yours,

J. S. Charnley
Fuel Licensing Manager

GENERAL ELECTRIC COMPANY

AFFIDAVIT

I, Glenn G. Sherwood, being duly sworn, depose and state as follows:

1. I am Manager, Product Licensing, General Electric Company, and have been delegated the function of reviewing the information described in paragraph 2 which is sought to be withheld and have been authorized to apply for its withholding.
2. The information sought to be withheld is contained in NEDE-24094-A, August 1986. Proprietary information is indicated by a bar in the side margin.
3. In designating material as proprietary, General Electric utilizes the definition of proprietary information and trade secrets set forth in the American Law Institute's Restatement of Torts, Section 757. This definition provides:

"A trade secret may consist of any formula, pattern, device or compilation of information which is used in one's business and which gives him an opportunity to obtain an advantage over competitors who do not know or use it.... A substantial element of secrecy must exist, so that, except by the use of improper means, there would be difficulty in acquiring information.... Some factors to be considered in determining whether given information is one's trade secret are: (1) the extent to which the information is known outside of his business; (2) the extent to which it is known by employees and others involved in his business; (3) the extent of measures taken by him to guard the secrecy of the information; (4) the value of the information to him and to his competitors; (5) the amount of effort or money expended by him in developing the information; (6) the ease or difficulty with which the information could be properly acquired or duplicated by others."

4. Some examples of categories of information which fit into the definition of proprietary information are:
 - a. Information that disclosed a process, method or apparatus where prevention of its use by General Electric's competitors without license from General Electric constitutes a competitive economic advantage over other companies;

- b. Information consisting of supporting data and analyses, including test data, relative to a process, method or apparatus, the application of which provide a competitive economic advantage, e.g., by optimization or improved marketability;
 - c. Information which if used by a competitor, would reduce his expenditure of resources or improve his competitive position in the design, manufacture, shipment, installation, assurance of quality or licensing of a similar product;
 - d. Information which reveals cost or price information, production capacities, budget levels or commercial strategies of General Electric, its customers or suppliers;
 - e. Information which reveals aspects of past, present or future General Electric customer-funded development plans and programs of potential commercial value to General Electric;
 - f. Information which discloses patentable subject matter for which it may be desirable to obtain patent protection;
 - g. Information which General Electric must treat as proprietary according to agreements with other parties.
5. In addition to proprietary treatment given to material meeting the standards enumerated above, General Electric customarily maintains in confidence preliminary and draft material which has not been subject to complete proprietary, technical and editorial review. This practice is based on the fact that draft documents often do not appropriately reflect all aspects of a problem, may contain tentative conclusions and may contain errors that can be corrected during normal review and approval procedures. Also, until the final document is complete it may not be possible to make any definitive determination as to its proprietary nature. General Electric is not generally willing to release such a document in such a preliminary form. Such documents are, however, on occasion furnished to the NRC staff on a confidential basis because it is General Electric's belief that it is in the public interest for the staff to be promptly furnished with significant or potentially significant information. Furnishing the document on a confidential basis pending completion of General Electric's internal review permits early acquaintance of the staff with the information while protecting General Electric's potential proprietary position and permitting General Electric to insure the public documents are technically accurate and correct.
6. Initial approval of proprietary treatment of a document is typically made by the Subsection Manager of the originating component, who is most likely to be acquainted with the value and sensitivity of the information in relation to industry knowledge. Access to such documents within the Company is limited on a "need to know" basis and such documents are clearly identified as proprietary.

7. The procedure for approval of external release of such a document typically requires review by the Subsection Manager, Project Manager, Principal Scientist or other equivalent authority, by the Subsection Manager of the cognizant Marketing function (or delegate) and by the Legal Operation for technical content, competitive effect and determination of the accuracy of the proprietary designation in accordance with the standards enumerated above. Disclosures outside General Electric are generally limited to regulatory bodies, customers and potential customers and their agents, suppliers and licensees and then only with appropriate protection by applicable regulatory provisions or proprietary agreements.
8. The document mentioned in paragraph 2 above have been evaluated in accordance with the above criteria and procedures and have been found to contain information which is proprietary and which is customarily held in confidence by General Electric.
9. The information mentioned in NEDE-24094-A has been classified as proprietary because it contains details concerning General Electric loss-of-coolant accident analysis methods for BWR 2/3 with drilled lower tie plates which were developed and qualified at considerable expense to General Electric. In addition, portions of this information are covered by the definition of proprietary contained in paragraph 4.5 and 4.c.
10. The information to the best of my knowledge and belief has consistently been held in confidence by the General Electric Company, no public disclosure has been made, and it is not available in public sources. All disclosures to third parties have been made pursuant to regulatory provisions of proprietary agreements which provide for maintenance of the information in confidence.
11. Public disclosure of the information sought to be withheld is likely to cause substantial harm to the competitive position of the General Electric Company and deprive or reduce the availability of profit making opportunities because:
 - a. Approximately \$2,000,000.00 was expended to develop the information in Paragraph 2 above.
 - b. The information is part of the General Electric technological base which is valuable in many business opportunities. The precise market value of this information is difficult to assess but it is clearly substantial. Public disclosure of this material would deprive General Electric of the ability to seek reimbursement and would permit competitors to utilize the information to General Electric's detriment.

STATE OF CALIFORNIA)
COUNTY OF SANTA CLARA) ss:

Glenn G. Sherwood, being duly sworn, deposes and says:

That he has read the foregoing affidavit and the matters stated therein are true and correct to the best of his knowledge, information, and belief.

Executed at San Jose, California, this 17 day of October 1986.

Glenn G. Sherwood
