Attention: Docking and Service Branch

Dear Sirs:

I am a retired electrical engineer of the Boston Edison Company.  
In the concentration of energy there is always the possibility of an  
explosion. In atomic power plants there is the possibility of an atomic  
explosion.

To generate power there must be a concentration of power. The key to  
the solution is to design a system that will never allow it to get out  
of control. The system has to be void of human failure. If there are no  
failures, there is no need to evacuate.

Yours truly,  
*Howard F. Knowles*
