Subject: Marine Turtle Removal Monthly Summary July 2020

Dear Meghan,

Attached, please find the monthly summary of marine turtle removals for July 2020. This month we captured 18 *Caretta caretta* and one *Chelonia mydas* in the intake canal of the St. Lucie power plant on Hutchinson Island. Two turtles were sent for rehabilitation (non-causal) and there were no mortalities during the month of July. As with all sea turtle strandings at the Saint Lucie Plant, the Florida Fish and Wildlife Conservation Commission (FWC) was consulted and stranding forms were filed with the state through the Sea Turtle Stranding and Salvage Network.

Two turtles were sent to rehabilitation facilities for non-causal injuries this month. On July 10th, an underweight subadult loggerhead with a heavy epibiont coverage was hand captured in the intake canal (Debilitated Loggerhead Turtle Syndrome). It was picked up and transported by the FWC Stranding Coordinator to the Loggerhead Marinelifelife Center (LMC) in Juno Beach. On July 24th, another underweight and lethargic subadult loggerhead was found on the 5-inch barrier net. It also had a heavy epibiont load and a recent injury to the posterior carapace measuring 2 cm x 10 cm (exposed bone but not open into the body cavity). The injury was not from entrapment. Inwater Research Group biologists transported this turtle to LMC for rehab.

Both turtles were sent to rehab for injuries or illness that were unrelated to the power plant and were therefore classified as non-causal. The primary 5-inch barrier net encountered moderate-to-severe amounts of algae this past month. IRG biologists performed around-the-clock monitoring of the intake canal and barrier net system either as warranted by sufficiently high debris intrusion levels or whenever directed by FPL oversight personnel. Furthermore, Underwater Engineering Services, Inc. inspected the primary barrier net and removed accumulated algae and debris as needed. Moreover, the primary barrier net has performed as designed and no turtles have been observed beyond the 5-inch net.

The tag numbers and morphometric data for all turtles captured during the month have been included with this report (see attachments/addendums). Also included is a spreadsheet for all captures, mortalities, injuries, and causal events delineated by species and by month for 2020. In addition, this

spreadsheet tracks fresh scrapes incurred on captured turtles for the current month, as well as the entire year.

Please feel free to contact me with any questions.

Sincerely,

Steve

NOTES

1. RECAPTURE. Turtle was removed from the intake canal, tagged and released at Hutchinson Island on 10/4/08, 12/19/08, 8/18/09, 5/15/10, and 7/3/20. New Inconel tags inserted on this capture event.
2. Adult female loggerhead. Tail length = 203 mm.
3. RECAPTURE. Turtle was removed from the intake canal, tagged and released at Hutchinson Island on 5/30/89, 9/6/90, 10/11/90, 10/15/90, 2/23/91, 8/10/92, 8/27/92, 9/21/92, 1/6/93, 6/8/93, 12/29/93, 3/22/94, 10/31/94, 3/17/95, 4/20/95, 2/7/96, 4/7/96, 7/11/96, 7/23/96, 7/29/96, 9/22/96, 10/9/96, 6/13/97, 5/15/98, 4/15/00, 6/13/00, 9/8/00, 11/19/00, 11/15/01, 9/16/02, 4/30/03, 11/24/03, 3/31/04, 9/15/04, 10/25/04, 8/10/05, 8/16/06, 4/30/08, 9/26/08, 8/19/09, 12/28/12, 4/17/13, 9/2/14, 10/7/17, 11/7/17, 1/16/18, 2/12/19, and 7/10/20. Multiple tag scars on both front flippers; no new tags inserted. Adult male loggerhead. Tail length = 420 mm. Sex determination based on tail length.
4. REHAB (NON-CAUSAL). Stranding# STW200710-01. Underweight subadult loggerhead with heavy epibiont coverage - Debilitated Loggerhead Turtle Syndrome. Carbuncle on dorsal side of head/neck. Picked up and transported by the FWC Stranding Coordinator to Loggerhead Marinelife Center (LMC) in Juno Beach.
5. Adult female loggerhead. Tail length = 195 mm. Deep moderate fresh scrape around nares.
6. Adult female loggerhead. Tail length = 205 mm.
7. Adult female loggerhead. Tail length = 214 mm.
8. Adult female loggerhead. Tail length = 198 mm. Mating scars on ventral side of neck.
9. Adult female loggerhead. Tail length = 228 mm. Slight depression in anterior plastron from either a congenital deformity or an old healed injury.
10. Adult female loggerhead. Tail length = 216 mm. Mating scar on ventral side of neck.
11. Adult female loggerhead. Tail length = 253 mm.
12. REHAB (NON-CAUSAL). Stranding #CRM200724-01. RECAPTURE. Turtle was removed from the intake canal, tagged and released at Hutchinson Island on 8/23/19, 12/15/19, 1/19/20. Underweight & lethargic subadult loggerhead found on the 5-inch barrier net. Heavy epibiont load. Recent injury to marginals of the left posterior carapace measuring 2 cm x 10 cm (exposed bone but not open into the body cavity). Injury was not from entrapment. IRG biologists transported the turtle to LMC for rehab.
13. RECAPTURE. Turtle was removed from the intake canal, tagged and released at Hutchinson Island on 4/19/18, 5/24/18, 11/5/18, 3/1/20, 7/27/20.
