April 29, 1987

Attention: Mr. R. Keimig  
Chief, Safeguards Section

Gentlemen:

Subject: Inspection Report 70-687/86-06

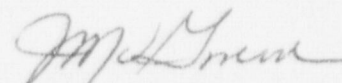

This letter is in response to the subject inspection report in which two items of non-compliance were reported. Our responses to the two violations cited follow in the same order in which they appeared in the subject inspection report.

A. The glass bottles containing "raw fission waste" in the hot cells were made from a type I Flint glass containing 10.5% B2 O3 in lieu of the 11.8% specification of section 4.2.5(2)(d) of the license. Corrective action has been completed in that all raw fission waste is now stored according to the requirements of section 4.2.5(1) of the license. The proper type of glass, which contains >11.8 weight percent B2 O3, has been identified with the vendor. If we choose to store SNM per section 4.2.5(2) this type of glass will be specified and certified for the storage bottles.

B. The Safety Committee has met four times since November 29th 1986. Meetings will be scheduled more frequently to assure that the minimum required frequency is met.

The corrective measures described above will prevent any future recurrence of these non-compliance items.

Very truly yours,

J. J. McGovern  
Plant Manager
