Statement released by PG&E, May 3, 1963:

"We are pleased that the Advisory Committee on Reactor Safeguards has given a favorable recommendation to the AEC for our Bodega Bay Atomic Park Project. We, of course, must await the action of the AEC itself and are looking forward to the hearings announced for Santa Rosa.

"As I have said before, we never have had any intention of building other than a safe, workable plant. With the ACRS support as reflected in the statement released today, we hope that our AEC presentation for a construction permit will be received satisfactorily and that work can be under way later this year."

Norman E. Sutherland  
President  
Pacific Gas & Electric Co.
