Document Control Desk
Washington, D. C. 20555

Gentlemen:

River Bend Station - Unit 1
Docket No. 50-458

This letter withdraws five previously proposed license amendments to the River Bend Station Technical Specifications. The proposed license amendments were requested to extend surveillance intervals for the attached listing of Technical Specification Surveillance Requirements until the first refueling outage scheduled to begin September 15, 1987. On June 18, 1987 River Bend Station entered an unscheduled outage. At the end of this outage, Gulf States Utilities (GSU) has successfully performed approximately 40 percent of the thirteen proposed changes and, therefore, no longer requires the requested revisions. The attached information provides the submittal dates and attachment numbers for the five respective proposed technical specification changes which are being withdrawn.

Sincerely,

N. C. Deddens
Senior Vice President
River Bend Nuclear Group

JCD/JEB/ERG/RJK/ehs
