To Whom It May Concern:

I would like to take advantage of simplifying the license renewal procedure by submitting this letter requesting renewal of our license 06-00483-10 (which expires 1/31/88) and all pertinent documents. The main reason for this alternative is that we have already been through a detailed analyses of our license in March of this year (see enclosed documents) when we sought successfully to amend our license to increase the license limits of certain isotopes.

When we originally requested the increase in January 12, 1987, we received a long detailed letter from Dr. Josephine Piccone on February 20, 1987 requesting further information concerning our usage and practice procedures (enclosed). We complied with Dr. Piccone's request in a letter of March 2, 1987 (enclosed) answering all of her questions. As a result, on March 18, 1987, we received an amended license (enclosed) which is in force at this time.

Enclosed are duplicate copies of these letters, amended license, and guide to radiation safety which as stated in our letter of March 2, part 3, is distributed to all users of radioactive materials at this Institution. As also mentioned, an annual training program which features an in-house produced video is presented.

According to Part 170.11 of the NRC Code of Rules and Regulations, as an educational institution, we are exempt from paying a fee.
