Milton H. Fischer, Ph.D.

SUBJECT: Program Review

License No. 48-16834-01
Docket No. 030-11719

A Review of our current program:

1. With the demise of the Research Department at this institution I am the only investigator that remains here and I work alone. No other person works with or frequents the laboratory area set aside for radionuclide experiments, storage, etc.
2. We wish to retain access to the same radionuclides and in the same quantities. The usage is the same with greater utilization of commercially available RIA kits. We will not be performing any animal experiments and do not have any animals at this institution.
3. In reviewing our documents, material related to animal experiments and incineration is out-of date and should be deleted.
4. All other matters are correct.
