OFFICE OF THE  
DOCKETING &  
BRANCH

Secretary US NRC  
Washington, DC 20555

Attention Gentlemen,

The title of your commission is the Nuclear Regulatory Commission. This means that your job is to protect all the people of this country and the environment. You should do this by making more regulations to stop the generation of nuclear waste. Our world is rapidly becoming a giant toxic waste dump. Nuclear waste is the worst of all the toxics that are currently being generated as it will remain hazardous for many years to come. The future inhabitants of this earth do not want to inherit a radioactive world. I urge you to do what ever is necessary to stop the generation of hazardous waste. As you well know Nuclear power is now way more expensive than other forms of energy. It now costs significantly less money for utilities to get their energy from the sun, by means of photovoltaics. There is something that is even cheaper than this, it is called conservation. There is no level of exposure to radiation that is safe. I will not tolerate any deregulation of, radioactive waste or the businesses that make it and the products they make. Please shift your policies so as to stop all waste from being generated in the first place.

Thank you,

*Tom Hagberg*
