Dear Mr. Anders;

I am an American citizen living in an academic community. I am writing this letter to ask you if you can supply me with some information.

The information I desire regards the licensing, or supposed licensing, of the nuclear plant in Diablo Canyon, Ca. My question is: Was the license for the plant to begin operations ever granted, and if it was, were there any extra safety precautions taken after an earthquake fault was found nearby?

If you could answer the dual question I have asked you, I would appreciate the information. I am writing an essay on nuclear environmental and safety risks and need the material.

Any additional information regarding safety precautions the NRC takes to ensure public health before granting and after granting licenses would be gratefully appreciated. Specifically, I am interested in the transportation, storage, and disposal of radioactive substances used at these plants.

Besides this material, I would also like to know if you could give me a good definition of a "nuke". I can't find one anywhere.

If you can give me any leads on what progress has been accomplished, to date, on breeder reactors, I could also use this information in my paper.

Any information you do send me I will be thankful for.

Sincerely Yours,

Charles Hearn
