

87  
JAN 21 1983

MEMORANDUM FOR: Robert E. Browning, Deputy Director  
Division of Waste Management

FROM: Richard E. Cunningham, Director  
Division of Fuel Cycle and Material Safety

SUBJECT: RADIOACTIVE WASTE POLICY ACT OF 1982

Listed below are current or former NRC licensees that possess low-level radioactive waste that may have resulted from the processing of source material for its zirconium, hafnium or rare earth content and thus may be eligible for inclusion under Section 151(c), "Special Sites," of the Low-Level Radioactive Waste Bill of 1982.

1. Amax, Parkersburg, West Virginia
2. Kawecki-Berylco, Reading, Pennsylvania
3. Molycorp, Washington, Pennsylvania
4. Whitaker Metals, Greenville, Pennsylvania
5. W. R. Grace, Pompton Plains, New Jersey
6. Kerr-McGee, West Chicago, Illinois

The above licensees are some that immediately come to mind. We will canvas the NRC records to see if additional sites can be identified. Also, there is some question as to whether Agreement State licensees will fall under 151(c); R. Fonner recommends that we ask ELD for a legal opinion on a specific site. Since Wah-Chang Teledyne in Albany, Oregon has been mentioned, FC will request ELD's opinion on this site. If sites in Agreement States are covered, additional sites may need to be added to this list.

Original Signed by  
D. R. Chapell
