

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

July 15, 1986

MEMORANDUM FOR: John W. Craig, Chief
Special Projects Inspection Section
Vendor Program Branch

FROM: Claudia M. Abbate
Special Projects Inspection Section
Vendor Program Branch

SUBJECT: SUMMARY OF JUNE 12, 1986, MEETING REGARDING
THE MODEL 125-B TRANSPORTATION CASK

On June 12, 1986, a meeting was held in Bethesda, Maryland between members of the Nuclear Regulatory Commission (NRC), Nuclear Packaging, Inc. (NUPAC), Department of Energy (DOE), EG&G Idaho, and Three Mile Island (TMI) Clean-Up Project Directorate. The meeting was held at the request of the TMI Clean-Up Project Directorate in order to clarify concerns identified during an NRC inspection of NUPAC on May 5-8, 1986. The concerns involve the nondestructive testing (NDT) performed on the Model 125-B transportation casks to be used to ship TMI Unit 2 core debris. During the inspection, the results of the NDT performed on the casks were unavailable for review; therefore, this led to questions concerning the preparation, execution, and results of the NDT.

The meeting consisted of a presentation by NUPAC describing their NDT program and discussions on the requirements of qualifications and certifications of personnel performing leak tests on the casks. During the meeting, it was suggested that a review of all NDT results be documented to verify the adequacy of the tests.

The specific findings of the inspection are documented in inspection report #99901047/86-01.

Enclosed is a list of attendees.
