Docket No.: 50-293

MEMORANDUM FOR: P. Leech, Project Manager, Project Directorate #1
Division of BWR Licensing

FROM: Gus C. Lainas, Assistant Director
Division of BWR Licensing

SUBJECT: SAFETY EVALUATION REPORT FOR GENERIC LETTER 83-28,
ITEM 2.1 (PART 1) (EQUIPMENT CLASSIFICATION) FOR
PILGRIM NUCLEAR POWER STATION (SRP SECTION 7.2, 17.2)

Plant Name: Pilgrim Nuclear Power Station
Utility: Boston Edison Company
Docket No.: 50-293
TAC No.: 52867
Licensing Status: OR
Resp. Directorate: PAD #1/DPLA
Project Manager: P. Leech
Review Branch: PAEI/DPA
Review Status: Incomplete

The licensee was required by Generic Letter 83-28 Item 2.1 (Part 1) to confirm that all components whose functioning is required to trip the reactor are identified as safety-related on all plant documentation and in information handling systems that are used to control all activities performed on this safety-related equipment. The licensee has responded and our review of the responses as documented in the enclosed contractor's report (EG&G-MTA-7188) finds the licensee's responses to Generic Letter 83-28 Item 2.1 (Part 1) to be acceptable. The enclosed SER documents our concurrence with the contractor's findings and also finds the licensee's responses for this item to be acceptable. We therefore consider Part 1 of Item 2.1 to be closed by this action. SALP input for the review of Item 2.1 (Part 1) of Generic Letter 83-28 is enclosed.

Generic Letter 83-28 Item 2.1 and its associated TAC number remain incomplete because the Vendor Interface portion (Part 2) of this item has not been resolved.
