Agricultural Products Environmental Health Center 400 Farmington Avenue

Farmington, CT 06032 (203) 674-6300

March 21, 1988

Mr. Jack Davis
Nuclear Materials Safety Section A
Division of Radiation Safety & Safeguards
U.S. Nuclear Regulatory Commission, Region I
475 Allendale Road
King of Prussia, PA 19406

Re: License No. 06-19068-01 Docket No. 030-16018

Dear Mr. Davis:

This letter is an application for amendment to our Material License No. 06-19068-1 of the Environmental Health Center, Stauffer Chemical Company.

to-

Please make the following changes:

1. Applicant Name

Stauffer Chemical Company Environmental Health Center ICI Americas Inc. Environmental Health Center

Log_

Remitter __ Check No.

Amount \$/20

Pate Check Recid.

By: A Cimbelly

Fee Catagory

8E. Maximum Amount on Hand

For Sulfur-35, change the maximum amount that licensee may possess at any one time under this license from 1 millicurie to ten (10) millicuries. Prior to this time no studies with S-35 have been conducted. A new research project will be initiated that makes use of S-35 labeled inorganic sulfate to monitor glycosaminoglycan production in cultured cells. Current plans will use no more than 10 millicuries and allow for one time removal of wastes.

For Phosphorus-32, change the maximum amount that licensee may possess at any one time under this license from 5 millicuries to ten (10) millicuries. Current studies are conducted with 1 millicurie at a time. Raising the limit to 10 millicuries will allow more cost efficient removal of wastes.

12. Individuals - Use or supervise see of radioactivity

RADIATION TRAINING - METABOLISM LABORATORY SENIOR STAFF G. D. Fisher 1. "Environmental Health and Radiation Safety", short course at University of California - Davis, 1986. The course content included the safe handling and use of radic sotopes in the laboratory. 2. ICI Americas Environmental Health Center radiation training, 1987. Onthe-job training including: review of regulations by Radiation Protection Officer, laboratory work area radiation monitoring, radioactive waste disposal procedures, personal protection measures, and review of laboratory standard operating procedures for handling and using radioactivity. 3. "Mammalian Toxicology" graduate course at University of California -Davis that included a segment on handling and use of radioactivity. D. S. Hackett 1. ICI Americas Environmental Health Center radiation training, 1988. Onthe-job training including: review of regulations by Radiation Protection Officer, laboratory work area radiation monitoring, radioactive waste disposal procedures, personal protection measures, and review of laboratory standard operating procedures for handling and using radioactivity. R. C. Peffer 1. "Bionucleonics" 3-credit course at the University of Pittsburgh. The course covered theoretical background, experimental procedures, general handling and proper disposal procedures for radioactivity. 2. One-day short course at University of Pittsburgh on safe handling of radioactivity and regulatory requirements. 3. ICI Americas Environmental Health Center radiation training, 1987. Onthe-job training including: review of regulations by Radiation Protection Officer, laboratory work area radiation monitoring, radioactive waste disposal procedures, personal protection measures, and review of laboratory standard operating procedures for handling and using radioactivity. J. C. Ritter 1. ICI Americas Environmental Health Center radiation training, 1987. Onthe-job training including: review of regulations by Radiation Protection Officer, laboratory work area radiation monitoring, radioactive waste disposal procedures, personal protection measures, and review of laboratory standard operating procedures for handling using radioactivity.

RADIATION TRAINING - GENERAL TOXICOLOGY SENIOR STAFF

Kenneth L. Pavkov

Formal training: Isotopes in Research, conducted at Oak Ridge Associated Universities, 1969.

RADIATION TRAINING - IN VITRO LABORATORY SENIOR STAFF

Polly R. Sager

Experience with radioactive compounds:

Worked with 203 Hg-methylmercury; 125 I-labeled proteins; 3 H-labeled amino acids and proteins; 14 C-labeled proteins and amino acids; 35 S-labeled inorganic sulfate and amino acids; and 32 P-labeled ATP and inorganic phosphate.

Most of the radiolabeled compounds were used in biochemical-type studies. These included determinations of protein synthesis, glycosaminoglycan production, phosphorylation of proteins, uptake and release of receptor ligands, and uptake of compounds by cultured cells. ²⁰³Hg-methylmercury was also used in vivo to assess whole body levels and tissue distribution of compound. Radiolabeled compounds were monitored by scintillation counting, gamma counting, autoradiography of gels and tissue sections.

W.B. Mattes

Formal training: Radiation Safety in the Laboratory, National Institutes of Health, 10 July, 1984

Laboratory experience with radioisotopes is outlined below. This list is not exclusive.

Johns Hopkins University 1980-1983
Worked with 3H-labeled nucleosides, pyrimidines and purines Carried out an organic synthesis with 3H-methyl iodide.
Johns Hopkins University 1980-1983
Worked with 3H-labeled nucleosides, pyrimidines and purines.
Worked with 3H-labeled DNA.
Worked with 3H-labeled N-acetoxy-acetylaminofluorene.
National Cancer Institute 1983-1986
Worked with 3H-labeled DNA.

Johns Hopkins University 1980-1983 Labeled proteins in vivo with 35S-methionine. Worked with the labeled proteins

W.B. Mattes - contd. 14C - University of Michigan 1974-1980 Carried out an organic synthesis with 14C-methyl iodide.

Carried out an organic synthesis with ¹⁴C-methyl iodide. Worked with ¹⁴C-labeled N-methyl mitomycin C. National Cancer Institute 1983-1986 Worked with ¹⁴C-labeled phenylalanine mustard.

Johns Hopkins University 1980-1983
Labeled DNA <u>in vivo</u> with ³²PO4.
Labeled DNA <u>in vitro</u> with ³²P-labeled nucleotides.
Worked with ³²P-labeled DNA.
ICI Environmental Health Center 1986-present
Labeled DNA <u>in vitro</u> with ³²P-labeled nucleotides.
Worked with ³²P-labeled DNA.

Labeled materials were monitored with scintillation counting, autoradiography (35 S and 32 P), fluorography (3 H), and Geiger-Mueller counting (35 S and 32 P).
