

QUESTION (6)(b)

How would the regulation apply to the alleged behavior by the utility manager?

ANSWER

The proposed regulation would require the licensee to have a program to assure that nuclear power plant personnel are not under the influence of any substance, legal or illegal, or mentally or physically impaired from any cause which adversely affects their ability to safely and competently perform their duties. Such a program would be expected to contain elements concerning alcohol use which would, therefore, apply to the allegations concerning the utility manager.
