The enclosed tape was prepared following the guidelines set forth in Regulatory Guide 8.7 Revision 1, "Instructions for Recording and Reporting Occupational Radiation Exposure Data." The tape was generated on April 17, 1998, and contains the Annual Dose Reports for each of our six nuclear stations. The order of the stations' data on the tape is LaSalle, Quad Cities, Byron, Dresden, Braidwood, and Zion. There are no names for the station files on the tape. Each station's data is preceded by a header record, which provides the information necessary to identify the source of the data.

The magnetic tape used for the data is a no label tape. It has a record size of 400, a blocking factor of 6000, and a fixed blocked record format. The tape was created off of the IBM mainframe using a 3420 tape reel. The character set is EBCDIC. As specified in the Regulatory Guide a copy of the magnetic tape is being transmitted to the REIRS Project Manager.

Please address any questions pertaining to this office.

Sincerely,

R.M. Krich
Vice President
