William J. Cahill, Jr.  
Executive Vice President

U. S. Nuclear Regulatory Commission  
Attn: Document Control Desk  
Washington, D. C. 20555

SUBJECT: COMANCHE PEAK STEAM ELECTRIC STATION (CPSES)  
DOCKET NOS. 50-445 AND 50-446  
REVIEW OF TECHNICAL CONCERNS AND ALLEGATIONS  
REVISED COMPLETION DATE FOR CONCERN 1.B.4.a

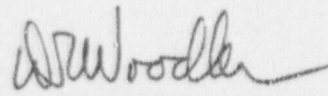

REF: TU Electric letter TXX-88294 from J. W. Beck  
to the NRC dated March 25, 1988.

Gentlemen:

In the referenced response to NRC Staff Concern 1.B.4.b, TU Electric committed to replace the Unit 1 Emergency Diesel Generator wattmeters with Class 1E certified wattmeters prior to Hot Functional Testing. This replacement was completed on June 19, 1989, after completion of Hot Functional Testing. There is no safety significance to the delay since the certified wattmeters were not required for the Hot Functional Testing.

Sincerely,

William J. Cahill, Jr.
