Technical Specifications Change
Request - A. C. Sources

Gentlemen:

South Carolina Electric & Gas Company (SCE&G) hereby requests an amendment to Technical Specifications Sections 3.8.1.1 and 3.8.1.2, "A. C. Sources," and Bases Section 3/4.8.1, 3/4.8.2 and 3/4.8.3, "A. C. Sources, D. C. Sources and Onsite Power Distribution Systems."

On April 28, 1989, SCE&G identified a discrepancy in the requirements for the volume of stored diesel fuel oil between the current design basis calculation and Technical Specification Sections 3.8.1.1.b.2 and 3.8.1.2.b.2. The design basis calculations determined that the minimum required fuel oil storage volume for each diesel should be 47,100 gallons while in Modes 1-4 and 33,200 gallons while in Modes 5 and 6. The current Technical Specification limits are 42,500 gallons (Modes 1-4) and 30,000 gallons (Modes 5 and 6).

This event was reported to the Commission on May 26, 1989 in Licensee Event Report (LER) 50/395 89-009. The submittal of this Technical Specifications change request satisfies Corrective Actions 1 and 2 of the LER.

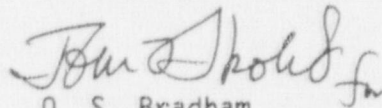

The marked up pages for the proposed amendments are provided in Attachment 1. The proposed no significant hazards evaluation is provided in Attachment 2. This request has been reviewed and approved by both the Plant Safety Review Committee and the Nuclear Safety Review Committee.
