Subject: Virgil C. Summer Nuclear Station
Docket No. 50/395
Operating License No. NPF-12
Technical Specification Change
Steam Generator F* Criterion

Gentlemen:

South Carolina Electric & Gas Company (SCE&G) hereby requests a revision to the Technical Specifications for the Virgil C. Summer Nuclear Station (VCSNS). Specifically, the proposed change revises the surveillance requirements of Technical Specification 3/4.4.5, "Steam Generators," to extend the application of the F* tube plugging criterion for the life of the steam generators. Administratively, the definition of an F* tube was clarified by grammatically restructuring the phrase without altering the technical content.

Attachments 1, 2, and 3 constitute the licensing submittal for the requested Technical Specification change. Attachment 1 contains the marked-up Technical Specification pages, Attachment 2 contains the safety analysis and supporting technical justification for the change, and Attachment 3 is the significant hazards evaluation pursuant to 10CFR50.91.

This proposed Technical Specification change has been reviewed and approved by both the Plant Safety Review Committee and the Nuclear Safety Review Committee.

I declare that the statements and matters set forth herein are true and correct to the best of my knowledge, information and belief.

Should you have any questions, please call at your convenience.

Very truly yours,

O. S. Bradham
