Dear Sir:

Three Mile Island Nuclear Station, Unit I (TMI-1)
Operating License No. DPR-50
Docket No. 50-289
Final Safety Analysis Report, Update 8 (UFSAR)
Fire Hazards Analysis Report, Revision 11 (FHAR)

Enclosed are one signed original and ten copies of the Final Safety Analysis Report, Update 8, for TMI-1 filed pursuant to 10 CFR 50.71(e). This UFSAR update contains changes necessary to reflect information, facility changes, procedure changes, and analyses up through January 20, 1989, as required by the rule. Further, as later information became available, the more current information was incorporated into the update, time permitting, e.g., all revised figures in this Update are based on the latest design drawings revised up through March 31, 1989.

One major change in this update which affects the overall document is the licensed power increase from 2535 MW_e to 2568 MW_e which occurred in Cycle 7. We have reflected this change in all areas where it had major impact on the UFSAR. However, there may be some minor instances where the change may not have been recognized by the reviewers of this update; hence, any further changes for the power increase will be accommodated in future updates.

Rev 11 To TMI-1 FHAR
TO: REG FILES (1 of 1)
A053
1/10

July 20, 1989

In addition, as part of the annual SAR update process, enclosed herewith is one (1) copy of Revision 11 to the TMI-1 FHAR. The FHAR, Revision 11, reflects the methodology used at TMI-1 to meet 10 CFR 50, Appendix R. Revision of the document resulted from changes to the facility, procedures, and new design information having been incorporated since Revision 10, up through March 31, 1989, as annotated by rev. bars.

Sincerely,

H. D. Hukill

Vice President & Director, TMI-1
