SUBJ: Extension of license No. 10-01169-01

The amount of research conducted at the VAMC (Atlanta) has been rapidly expanding in recent months. We have recently received a licensing guide for a specific license of broad scope for byproduct material. This type of license is more appropriate for our facility than the specific license for medical use now held.

We would like to request a license extension of 90 days in order to prepare a license application for a specific license of broad scope.

GLENN ALRED, JR.  
Medical Center Director
