General Comment

From reading the EIS it appears that most of my comments will fall outside the scope of the discussion. My comments reflect my concerns about 1. dangers of moving high level radioactive waste multiple times before a permanent site can be approved; 2. the integrity of the thin walled canisters being used, their monitorability and ability to withstand the rigors of remaining safe for thousands of years; and 3. the prospect of this site becoming a de facto permanent waste site if no permanent site can be approved; is this site evaluated for that eventuality?

Where in NRC process can such safety concerns be raised? Concerns of safety seem consistently to fall outside the scope of issues being considered for public comment.

Please advise.
