## General Comment

Re Docket ID NRC 2020 0141

I am cancer survivor and have been a patient of about 37 PET CT's since 2008.

I have been closely following the issue of extravasations occurring during PET CT and want to voice my concern.

I am concerned each time I receive the radioactive material that the tech has administered it correctly.

With the increasing occurrence of cancer in our society I would think that improvements that reduce likelihood of extravasations would benefit all patients quality of life.

Please consider the changes to reporting extravasations to include all occurrences, each and every time so that the PET CT industry treats patients fairly and safely
