Hello Mr. Cox,

We are near completion of an amendment for the Shearon Harris Nuclear Power Plant, Unit 1, to revise Technical Specification (TS) 3.3.3.6, "Accident Monitoring Instrumentation," to change the allowed outage time for inoperable post-accident monitoring (PAM) instrumentation, eliminate the shutdown requirement for inoperable PAM instruments when the minimum required channels are operable, and add a provision that allows a separate entry for each instrument function. The licensee is also proposing to revise TS 3.9.2, "Instrumentation," to remove the audible indication requirement in Mode 6, as well as relocate the requirements for electrical equipment protective devices in TS 3.8.4.1, "Containment Penetration Conductor Overcurrent Protective Devices," and TS 3.8.4.2, "Motor Operated Valves Thermal Overload Protection," from TSs to licensee-controlled procedure PLP-106, "Technical Specification Equipment List Program." Additionally, the licensee is proposing a revision to the Note in TS 3.9.2 to allow for the substitution of Wide Range Neutron Flux Monitors for both of the Source Range Neutron Flux Monitors required to be operable while in Mode 6.

The application is dated March 12, 2020 as supplemented by letters date June 22 and October 2, 2020, (ADAMS Accession Nos. ML20072M618, ML20174A639, and ML20276A317, respectively).

The no significant hazards consideration determination was noticed in the Federal Register on August 25, 2020 (85 FR 52380), attached.

Please respond if you have any or no comments.

Thanks

Mike Mahoney
