TRAINING: No special training is required for any documents issued with this Change Notice.

REMARKS: IMC 1245 Appendix D1, "Maintaining Qualifications," has been revised to identify the competencies that the refresher training program is designed to reinforce for inspectors, operator license examiners and analysts. This change also provided an additional source of refresher training courses for power reactor inspectors. With the approval of their Branch Chief, these individuals may now substitute the reactor technology courses for other training courses if the alternate course curriculum meets the needs of the agency and individual inspector. Inspector proficiency and site access training requirements were added to this document to centralize refresher training requirements and inspector proficiency expectations in one document. Several format changes were made to standardize the layout of the qualification requirements.

IP 85305, "Item Monitoring," has been revised to reflect organizational changes and to incorporate recommendations from Smarter Inspection initiative (ML20073G659).

IP 85307, "Process Monitoring," has been revised to reflect organizational changes and to incorporate recommendations from Smarter Inspection initiative (ML20073G659).

IP 85315, "Internal Control,\" has been revised to reflect organizational changes and to incorporate recommendations from Smarter Inspection initiative (ML20073G659).
