**NRC Hosted Public Meeting to Discuss Lessons Learned from Power-Operated Valve Inspections**

On December 8, 2020, NRC staff held a Category 2 public meeting (Agencywide Documents Access and Management System Accession No. ML20342A041) via webinar to discuss lessons learned from the first year of conducting Inspection Procedure 71111.21N.02, "Design-Basis Capability of Power-Operated Valves (POV) under 10 CFR [Title 10 of the *Code of Federal Regulations*] 50.55a Requirements," or POV inspections. Discussions included a review of inspection implementation and how lessons learned from the environmental qualification inspections were incorporated to prepare for POV inspection implementation. The staff also discussed 14 lessons learned from conducting the first year of POV inspections and sought industry and public feedback. NRC staff plans to have follow-up discussions on this topic at the Reactor Oversight Process public meeting in February or March 2021.

**Staff Approved Licensing Requests for Regulatory Relief Related to the COVID-19 Public Health Emergency**

The NRC staff has reviewed and approved several licensing requests seeking temporary flexibilities to maintain the safe and secure operation of the U.S. nuclear fleet during the pandemic. A summary of approved licensing actions provided during this reporting period are summarized below. A complete list of licensing actions approved by the NRC in response to the COVID-19 public health emergency is available on the NRC public website at <https://www.nrc.gov/about-nrc/covid-19/reactors/licensing-actions.html>.

**NMSS Staff Extend Time for Possession of Waste at Waste Control Specialists Site**

On December 7, 2020, the NRC issued the letter (Agencywide Documents Access and Management System Accession No. ML20252A182) that approved extending the timeframe for possession of the Department of Energy (DOE) Los Alamos National Laboratory (LANL) Waste at the Waste Control Specialists (WCS) site for another two years until December 23, 2022. LANL Waste is transuranic waste with special nuclear material that originated at LANL that is destined for disposal at the DOE Waste Isolation Pilot Plant (WIPP) facility in New Mexico. Since February 2014, following a temporary closure of the WIPP facility, the DOE shipped the LANL Waste to the WCS site for temporary storage. Upon the reopening of the WIPP Facility, some of the LANL Waste was able to be shipped by the DOE from the WCS site to the WIPP Facility, however, the rest of the LANL Waste will continue to be in temporary storage at the WCS site.

**NMSS Staff Held Public Meeting on Medical Extravasations**

On December 8, 2020, staff held a public meeting to obtain medical community feedback on whether extravasations should be reported as medical events. Over 275 people participated and most participants strongly opposed reporting extravasations as medical events. Some participants supported regulating extravasations. Most participants said that extravasation is a practice of medicine issue and that requiring licensees to monitor and classify extravasation as medical events will not prevent extravasations from occurring. Participants also stated that classifying extravasations as medical events would create financial, clinical, and administrative burdens on medical care with no clear benefit to patients. Other participants also offered that injection quality improvement initiatives are already underway in nuclear medicine. The staff will use this feedback to help inform its next actions.

**Advanced Manufacturing Technologies Subtask 2A: Notice of Withdrawal and Reissuance; Public Meeting and Request for Comment; 10 CFR Part 50; NRC-2020-0253**

On December 10, 2020, the NRC published a notice in the *Federal Register* ([85 FR 79434](#)) entitled "Advanced Manufacturing Technologies Subtask 2A" withdrawing the November 30, 2020, notice ([85 FR 76489](#)) which requested public comment on a document titled, "Implementation of Quality Assurance Criteria and 10 CFR 50.59 for Nuclear Power Plant Components Produced Using Advanced Manufacturing Technologies." This document addresses the application of quality assurance criteria and NRC's requirements in its regulations regarding, "Changes, tests and experiments" to the implementation of Advanced Manufacturing Technologies-fabricated components in U.S. nuclear power plants. This notice is reissued to include additional explanatory information, extend the comment period 60 days, and correct the ADAMS accession number for the draft document. Comments on the draft document are requested by February 8, 2021.
