

# License Renewal in the US – Where We Are and How We Got Here

Allen Hiser  
Division of New and Renewed Licenses

January 21, 2021

# OUTLINE

---

- License Renewal Basis and Process
- Development of SLR Guidance Documents
- Status of LR and SLR
- Today's Meeting

LR is license renewal from 40 to 60 years

SLR is subsequent license renewal from 60 to 80 years

# Legislation Provisions for Licensing of Nuclear Power Plants

---

## **Sec. 103. Commercial Licenses**

a. The Commission is authorized to issue licenses to persons applying therefor to transfer or receive in interstate commerce, manufacture, produce, transfer, acquire, possess, use<sup>100</sup> import, or export under the terms of an agreement for cooperation arranged pursuant to section 123, utilization or production facilities for industrial or commercial purposes.<sup>101</sup> Such licenses shall be issued in accordance with the provisions of chapter 16 and subject to such conditions as the Commission may by rule or regulation establish to effectuate the purposes and provisions of this Act.

b. The Commission shall issue such licenses on a nonexclusive basis to persons applying therefor (1) whose proposed activities will serve a useful purpose proportionate to the quantities of special nuclear material or source material to be utilized; (2) who are equipped to observe and who agree to observe such safety standards to protect health and to minimize danger to life or property as the Commission may by rule

c. Each such license shall be issued for a specified period, as determined by the Commission, depending on the type of activity to be licensed, but not exceeding forty years from the authorization to commence operations<sup>102</sup> and may be renewed upon the expiration of such period.

- **Atomic Energy Act**
  - Plants licensed to operate for 40 years
  - Allows for license renewal
  - No restrictions on number of renewals

# License Renewal Rule – 10 CFR Part 54 (1995)

---

- Rule provisions
  - Permits renewal for up to 20 years (54.31(b)) – e.g., 40 to 60 years
  - Can apply 20 years before license expiration per 54.17(c)
  - Must apply at least 5 years before expiration per 2.109(b) (“timely renewal” provision)
  - A renewed license may be subsequently renewed per 54.31(d)
  - No restrictions on number of subsequent renewals
- Focus is on demonstrating adequate management of the effects of aging for long-lived, passive structures and components important to plant safety
  - Other aspects of original license are not reconsidered
  - “A program based solely on detecting structure and component failures is not considered an effective aging management program”

# License Renewal Safety Principles

---

- **Regulatory process** is adequate to assure plant safety
  - License renewal review to ensure that the effects of aging will be adequately managed in the period of extended operation.
- The plant's **current licensing basis (CLB)** to be maintained during the renewal term (“same manner and same extent”)
  - Same plant operating rules for the renewal term
  - Accomplished through a program of age-related degradation management of passive, long-lived plant systems, structures and components identified as in-scope for license renewal

# Regulatory Process Essential Elements

---

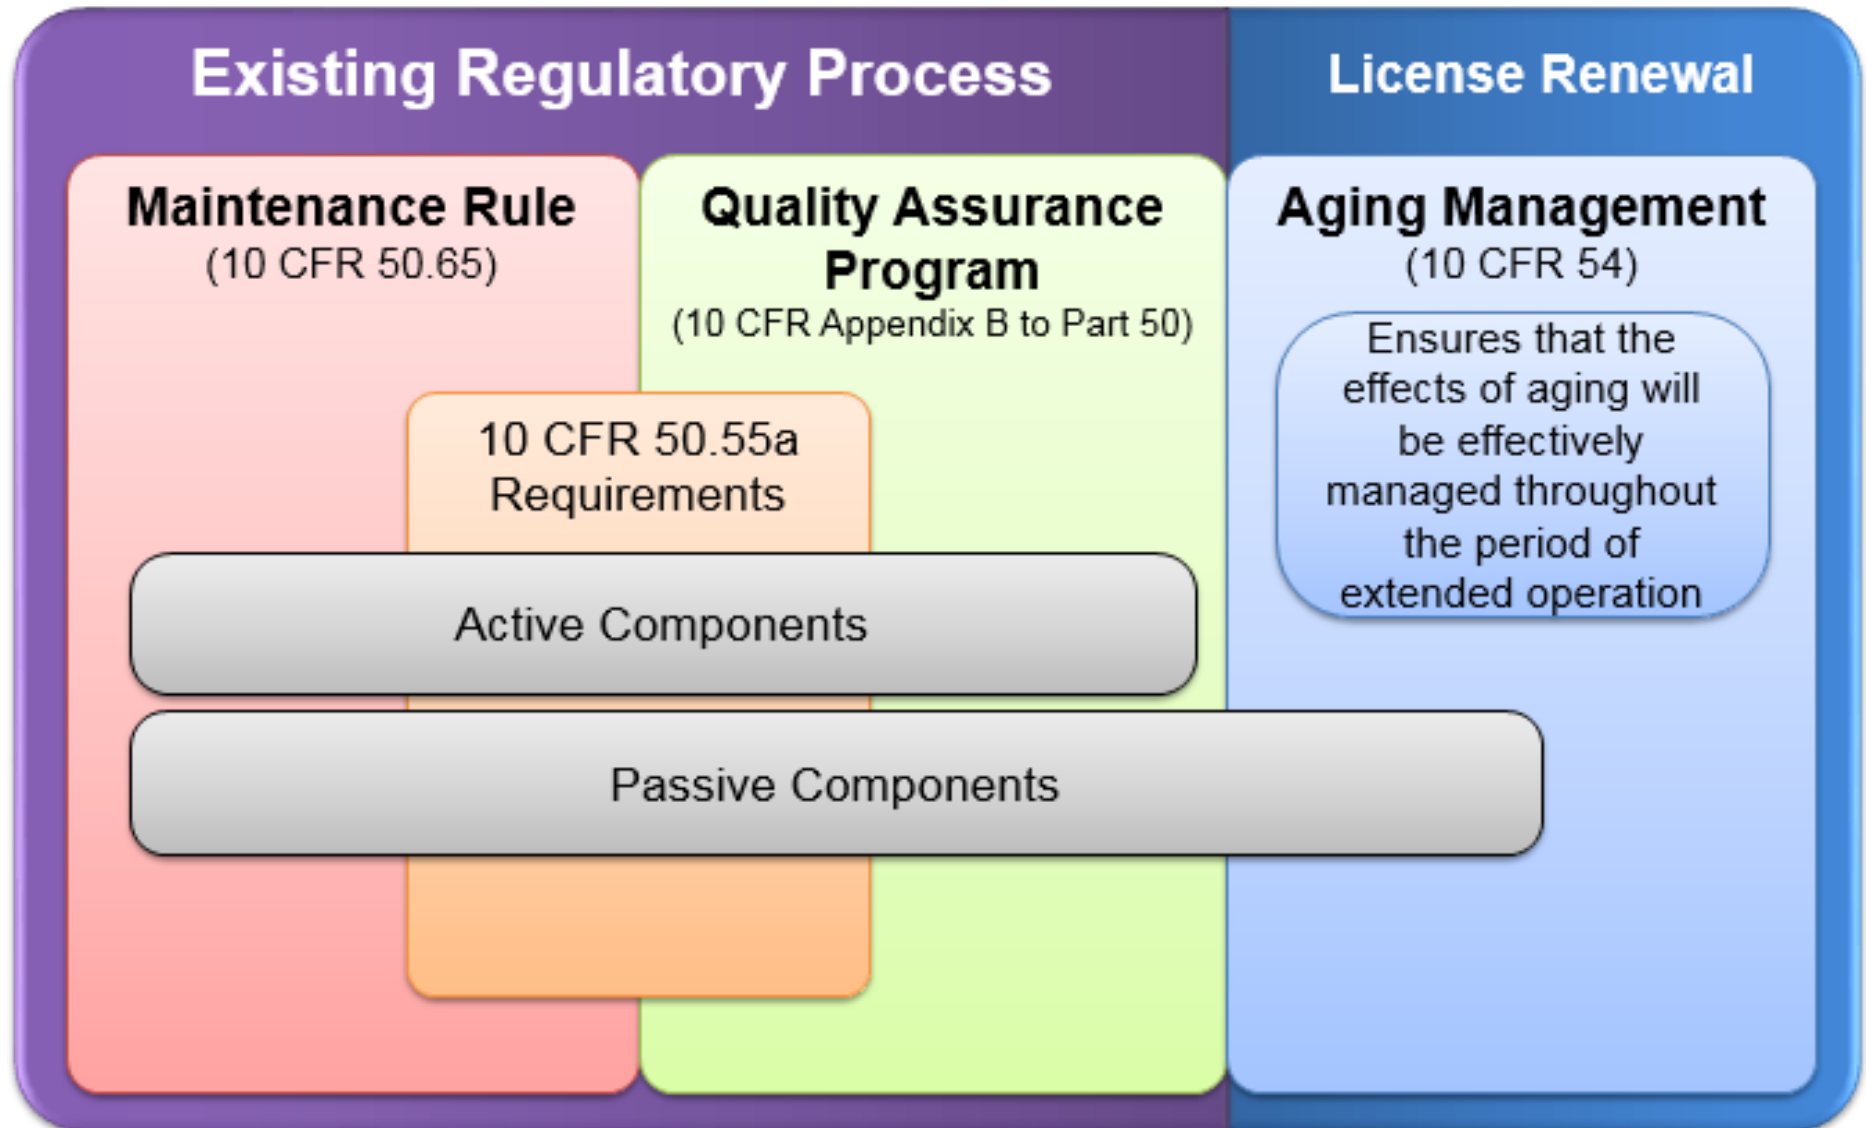

- Effective compliance with regulations
- On-site resident inspectors and specialized inspections
- Performance assessments of inspection findings
- Operating experience analysis and utilization
- Safety issue resolutions (generic and plant specific)
- Materials aging & degradation issues important to safety addressed by
  - Rule changes, generic communications, orders, voluntary actions

# Part 50 Regulations

---

- 50.48 – Fire protection
- 50.49 – Environmental qualification of electric equipment important to safety for nuclear power plants
- 50.55a – Codes and standards
- 50.60 – Acceptance criteria for fracture prevention measures for lightwater nuclear power reactors for normal operation
- 50.61, 61a – Fracture toughness requirements for protection against pressurized thermal shock events (PTS Rule), and Alternate fracture toughness requirements
- 50.65 – Requirements for monitoring the effectiveness of maintenance at nuclear power plants (Maintenance Rule)
- Appendix B – Quality Assurance Criteria
- Appendix G – Fracture Toughness Requirements
- Appendix H – Reactor Vessel Material Surveillance Program Requirements
- Appendix J – Primary Reactor Containment Leakage Testing

# Safety For License Renewal

# Scope of License Renewal

---

- Safety-related systems, structures, and components (SSCs)
  - Maintain integrity of the reactor coolant pressure boundary
  - Ensure capability to shut down and maintain safe shutdown
  - Prevent or mitigate offsite exposures comparable to §50.34(a)(1), §50.67(b)(2), or §100.11
- Non-safety related SSCs whose failure could affect safety-related SSC functions
- SSCs relied upon for compliance with the Commission's regulations for:
  - Fire protection (10 CFR 50.48)
  - Environmental qualification (10 CFR 50.49)
  - Pressurized thermal shock (10 CFR 50.61)
  - Anticipated transients without scram (10 CFR 50.62)
  - Station blackout (10 CFR 50.63)

# Issues Not in Scope of License Renewal Review

---

- Ongoing Regulatory Oversight Issues:
  - Emergency planning (10 CFR 50.47)
  - Security (10 CFR Part 73)
  - Current safety performance

<http://www.nrc.gov/NRR/OVERSIGHT/ASSESS/index.html>

# Main Topics of Safety Review

---

- Scoping and screening of SSCs
  - Identify SSCs that are “in-scope” of license renewal
  - Identify structures and components (SCs) that are subject to aging management review (AMR)
- Aging management
  - AMR identifies relevant aging effects and aging management approach(es)
  - Aging management programs are specified to manage the effects of aging, with reasonable assurance
- Time-limited aging analyses (TLAAs)
  - Demonstrate that CLB analyses are acceptable or will be managed

**Safety review relies on License Renewal Guidance Documents**

# Standards for Approval (10 CFR 54.29)

---

A renewed license may be issued if the Commission finds that:

- Actions have been identified and have been or will be taken such that there is **reasonable assurance** that the activities authorized by the renewed license will continue to be conducted in accordance with the CLB. The actions are with respect to
  - managing the effects of aging during the period of extended operation (PEO) on the functionality of structures and components
  - TLAAAs
- Environmental review requirements have been satisfied
- Any consideration of Commission rules and regulations in adjudicatory proceedings has been resolved

# License Renewal Guidance Documents

---

- Generic Aging Lessons Learned
  - Generic Aging Lessons Learned (GALL) report (NUREG-1801, Rev. 2) and GALL-SLR report (NUREG-2191)
  - Provides assessments for AMR, including identification of materials, environments and aging effects that require management
  - Identifies acceptable AMPs
- Standard Review Plan
  - Standard Review Plan (SRP) for License Renewal (SRP-LR) (NUREG-1800, Rev. 2) and SRP-SLR (NUREG-2192)
  - Guidance for staff review of: Scoping and Screening, Aging Management Review, TLAAs
- Amended through Interim Staff Guidance (ISG) process (LR-ISG or SLR-ISG), based on operating experience or lessons learned from LRA and SLRA reviews
- Regulatory Guide 1.188, Rev. 2, application format, endorses Nuclear Energy Institute (NEI) guidance NEI 95-10 (LR) and NEI 17-01 (SLR).

# Subsequent License Renewal

---

- License for plant operation from 60 to 80 years
- Commission determined no rule changes needed (SRM-SECY-14-0016)
- Several generic technical issues identified
- Industry to resolve technical issues generically or through plant-specific SLR applications

# SLR Technical Issues

---

- Reactor pressure vessel – neutron embrittlement
  - Trends for high fluence levels
  - Surveillance programs
- Reactor vessel internals - high fluence effects
  - Irradiation-assisted stress corrosion cracking
  - Loss of fracture toughness
  - Void swelling
- Concrete and containment performance
  - Long-term radiation and high temperature exposure
  - Alkali-silica reaction (ASR)
- Electrical cables
  - Environmental qualification
  - In-service testing of cables
  - Long-term submersion of low and medium voltage cables

# Concerns for Aging

---

- Identification of potential new aging phenomena
  - Known mechanisms
  - New phenomena
- Approaches for identifying potential aging phenomena
  - Expanded materials degradation assessment
  - Results from 1<sup>st</sup> renewal aging management programs
  - Domestic and international operating experience
  - Research findings

# NRC Actions to Develop SLR Guidance Documents

---

- **Expert panel process** to identify potential materials degradation issues for 80 years of operation
- **Audits** to assess results from implementation of AMPs at three plants with renewed licenses
- **Public meetings** on technical issues, including operating experience and industry research activities
- **NRC staff review** of information and propose aging management approaches for 80 years of operation

# Expanded Materials Degradation Assessment

NUREG/CR-7153, Vol. 1  
ORNL/TM-2013/532

## Expanded Materials Degradation Assessment (EMDA)

### Volume 1: Executive Summary of EMDA Process and Results

Manuscript Completed: October 2013  
Date Published: October 2014

Prepared by  
J. T. Busby  
Oak Ridge National Laboratory

On behalf of  
Oak Ridge National Laboratory  
Managed by UT-Battelle, LLC

J. T. Busby, DOE-NE LWRS EMDA Lead

P. G. Oberson and C. E. Carpenter, NRC Project Managers  
M. Srinivasan, NRC Technical Monitor

Office of Nuclear Regulatory Research

ML14279A321

NUREG/CR-7153, Vol. 3  
ORNL/TM-2013/532

## Expanded Materials Degradation Assessment (EMDA)

### Volume 3: Aging of Reactor Pressure Vessels

Manuscript Completed: October 2013  
Date Published: October 2014

Prepared by Expert Panel  
Oak Ridge National Laboratory: Randy K. Nanstad,  
Thomas M. Rosseeel, and Mikhail A. Sokolov  
ATI Consulting: William L. Sener  
Japan Central Research Institute of Electric Power Industry:  
Taku Arai and Naoki Soneda  
Electric Power Research Institute: Robin Dyle  
The University of California, Santa Barbara: G. Robert Odette  
U.S. Nuclear Regulatory Commission: Mark T. Kirk  
Westinghouse: Brian N. Burgess and J. Brian Hall

On behalf of  
Oak Ridge National Laboratory  
Managed by UT-Battelle, LLC

J. T. Busby, DOE-NE LWRS EMDA Lead

P. G. Oberson and C. E. Carpenter, NRC Project Managers  
M. Srinivasan, NRC Technical Monitor

Office of Nuclear Regulatory Research

ML14279A349

NUREG/CR-7153, Vol. 2  
ORNL/TM-2013/532

## Expanded Materials Degradation Assessment (EMDA)

### Volume 2: Aging of Core Internals and Piping Systems

Manuscript Completed: October 2013  
Date Published: October 2014

Prepared by Expert Panel  
Peter Andresen, General Electric; Koji Anoka, Institute of Nuclear Safety Systems; Steve Bruemmer, Pacific Northwest National Laboratory; Jeremy Busby, Oak Ridge National Laboratory; Robin Dyle, Electric Power Research Institute; Peter Ford, General Electric-Retired; Karen Gott, Swedish Nuclear Power Inspectorate-Retired; Amy Hull, U.S. Nuclear Regulatory Commission; and Roger Staehle, Staehle Consulting

On behalf of  
Oak Ridge National Laboratory  
Managed by UT-Battelle, LLC

J. T. Busby, DOE-NE LWRS EMDA Lead

P. G. Oberson and C. E. Carpenter, NRC Project Managers  
M. Srinivasan, NRC Technical Monitor

Office of Nuclear Regulatory Research

ML14279A331

NUREG/CR-7153, Vol. 4  
ORNL/TM-2013/532

## Expanded Materials Degradation Assessment (EMDA)

### Volume 4: Aging of Concrete and Civil Structures

Manuscript Completed: October 2013  
Date Published: October 2014

Prepared by Expert Panel  
Herman Graves, U.S. Nuclear Regulatory Commission; Yann Le Page, Electricite de France and Oak Ridge National Laboratory; Dan Naus, Oak Ridge National Laboratory; Joseph Raab, Anahed; Victor Saouma, University of Colorado-Boulder; Abdul Shaikh, U.S. Nuclear Regulatory Commission; James Wall, Electric Power Research Institute

On behalf of  
Oak Ridge National Laboratory  
Managed by UT-Battelle, LLC

J. T. Busby, DOE-NE LWRS EMDA Lead

P. G. Oberson and C. E. Carpenter, NRC Project Managers  
M. Srinivasan, NRC Technical Monitor

Office of Nuclear Regulatory Research

ML14279A430

NUREG/CR-7153, Vol. 5  
ORNL/TM-2013/532

## Expanded Materials Degradation Assessment (EMDA)

### Volume 5: Aging of Cables and Cable Systems

Manuscript Completed: October 2013  
Date Published: October 2014

Prepared by Expert Panel  
Robert Bernsten, Sandia National Laboratory; Sue Burnay, John Knott Associates; Clifford Douth, U.S. Nuclear Regulatory Commission; Ken Gillen, Sandia National Laboratory-Retired; Robert Koenig, Marmion Innovation and Technology Group; Sheila Ray, U.S. Nuclear Regulatory Commission; Kevin Simmons, Pacific Northwest National Laboratory; Gary Toman, Electric Power Research Institute; Gregory Von White II, Sandia National Laboratory

On behalf of  
Oak Ridge National Laboratory  
Managed by UT-Battelle, LLC

J. T. Busby, DOE-NE LWRS EMDA Lead

P. G. Oberson and C. E. Carpenter, NRC Project Managers  
M. Srinivasan, NRC Technical Monitor

# Basis for Changes to Develop GALL-SLR

---

- To reflect expected aging differences for increased operating time from 60 to 80 years
- New plant operating experience since GALL Rev. 2
- Gaps identified in current guidance
- Improvements in efficiency and effectiveness of applications and NRC reviews
- Corrections to GALL Rev. 2 and SRP-LR Rev. 2
- Incorporate Interim Staff Guidance since GALL Rev. 2

# SLR Guidance Documents

 **U.S.NRC**  
United States Nuclear Regulatory Commission  
*Protecting People and the Environment*

NUREG-2191, Vol. 1

**Generic Aging Lessons  
Learned for Subsequent  
License Renewal  
(GALL-SLR) Report**

Final Report

 **U.S.NRC**  
United States Nuclear Regulatory Commission  
*Protecting People and the Environment*

NUREG-2191, Vol. 2

**Generic Aging Lessons  
Learned for Subsequent  
License Renewal  
(GALL-SLR) Report**

Final Report

 **U.S.NRC**  
United States Nuclear Regulatory Commission  
*Protecting People and the Environment*

NUREG-2192

**Standard Review Plan for  
Review of Subsequent  
License Renewal Applications  
for Nuclear Power Plants**

Final Report

# License Renewal Status

- 94 operating reactor units in the U.S.
- Renewed licenses issued for 94 units (8 have ceased operations)
  - 8 units with 40-year licenses (Diablo Canyon will shutdown 2024/2025)
  - 82 units with 60-year licenses
  - 4 units with 80-year licenses (Turkey Point and Peach Bottom)
- 55 units (48 operating) have entered their 41<sup>st</sup> year of operation; first was in April 2009
  - more than 350 reactor-years of operation beyond the initial 40-year licenses
- SLR application status
  - 3 applications under review
    - o Surry Power Station, Units 1 and 2
    - o North Anna Power Station, Units 1 and 2
    - o Point Beach, Units 1 and 2
  - 1 expected application
    - o Oconee Nuclear Station, Units 1, 2, and 3 – by the end of 2021

# Today's Meeting

---

Purpose: public dialogue related to the need (and timing) for the NRC to consider the potential technical issues and guidance document development related to license renewal that would authorize operation for up to 100 years

- Should the NRC begin to consider the potential technical issues and the development of guidance documents to support license renewal to authorize operation for up to 100 years, and if so, when?
- What are the technical issues that could be potential challenges for license renewal to 100 years?
- What approaches should be used to optimize the development of data to address potential technical challenge areas, if any, for operation up to 100 years?

# Presenters/Organizations

---

- Beyond Nuclear (Paul Gunter)
- Electric Power Research Institute (Emma Wong)
  - Michael Burke
  - Sam Johnson
  - Andrew Mantey
- Nuclear Energy Institute (Christopher Earls)
- Oak Ridge National Laboratory/DOE (Thomas Rosseel)
  - Michael Sokolov
  - Yann Le Pape
- Pacific Northwest National Laboratory/DOE (Leo Fifield)
- Texas A&M/DOE (Frank Garner)
- University of Colorado-Boulder (Victor Saouma, C-10 Tech. Advisor)
- NRC
  - Carol Moyer
  - Mita Sircar
  - Darrell Murdock

# Meeting Flow

---

- For each topic:
  - NRC presentation regarding on-going research
  - Presentations from invited speakers
  - Public comment period
  - Roundtable discussion in any remaining time
- Following the four topics:
  - Final discussion and summary
  - Closing remarks – Anna Bradford
