General Comment

Good day to whomever is viewing my comment,

I would like to preface that I appreciate the opportunity to comment on Amendment No. 15 of the Holtec International HI-STORM 100 Cask System, Certificate of Compliance No. 1014.

In regards to altering the current compliance standards of the Holtec International HI-STORM Cask System, I see no reason why the NRC should not move forward with this proposal, as you clearly outline that your actions are consistent with the regulatory power that the NRC was granted under Section 133 of the Nuclear Waste Policy Act of 1982. The proper management of nuclear material is essential to the utilization of the efficiency of nuclear products, and is therefore necessary in safeguarding a positive perception surrounding nuclear technology. If the NRC did not carry out its duty to ensure that the Certificate of Compliance of Holtec International HI-STORM 100 Cask System is based on up-to-date references and current scientific data, then a devastating nuclear failure would surely damage an already unstable public trust of nuclear advancement.

Continue to safeguard modern society and future development by following through with this dutiful proposal.
