

RB-2021-02, Written Exam Analysis

The class consisted of 15 students (9 SROs).

Question 68 11/15 missed

RBS has reviewed the question and believes it to be valid and has only one correct answer. This K/A was presented during the training program.

High missed question due to students' attention to detail and level of knowledge. Students were weak on the definition of high energy systems. The students that missed the question assumed the pressure also met the requirement of a high energy system.

Question 77, 6/9 missed

RBS has reviewed the question and believes it to be valid and has only one correct answer. This K/A was presented during the training program.

High missed question due to students' attention to detail and level of knowledge. Students were weak on the basis and limit for the Drywell-to-Primary Containment differential pressure.

Question 81, 6/9 missed

RBS has reviewed the question and believes it to be valid and has only one correct answer. This K/A was presented during the training program.

High missed question due to students' attention to detail and level of knowledge. Students were weak on the time requirement to declare the Unusual Event for a single fire alarm. Most students confused the 30 minute time requirement with the 15 minute time requirement.

Question 97, 5/9 missed

RBS has reviewed the question and believes it to be valid and has only one correct answer. This K/A was presented during the training program.

High missed question due to students' attention to detail and level of knowledge. Students were weak on the applicability of the generic tech Spec SR 3.0.3.
